Mobile: +16605391299

Senior Frontend Developer

PROFESSIONAL SUMMARY:

- Web design and front-end developer with 5+ years of experience, demonstrating exceptional design taste and user experience insight in creating modern web layouts and visual elements.
- Expert in converting designs into pixel-perfect interfaces using HTML5 and CSS3, applying deep understanding of color theory, typography, and visual hierarchy for aesthetic appeal.
- Collaborated with technical teams to improve annotation workflows related to layout and interaction design, ensuring clarity and functional design in AI-generated outputs.
- Provided feedback on AI-generated designs, enhancing responsiveness and usability while applying current design trends and best practices to guide AI development in UI/UX design.
- Applied creative problem-solving ability to refine AI outputs, ensuring aesthetic appeal and functional design while adhering to modern web standards and responsive design principles.
- Developed and maintained web applications, ensuring exceptional design taste and layout precision, while supporting continuous improvement of internal tools and processes.
- Applied excellent attention to detail in web development projects, utilizing strong communication skills to collaborate with cross-functional teams and advance AI capabilities in design.
- Implemented unit, integration, and E2E tests using Jest, React Testing Library, Cypress, and Jasmine, supporting test-driven development and maintaining high-quality code.
- Built responsive layouts with SCSS, Tailwind CSS, and Angular Material using atomic design principles, Flexbox, and CSS Grid to ensure consistent styling across breakpoints.
- Optimized performance using Lighthouse, React Profiler, and Chrome DevTools, reducing TTI and improving Core Web Vitals via code splitting, lazy loading, and dynamic imports.
- Designed and maintained centralized component libraries with Storybook.js, improving cross-project UI consistency, enabling live documentation, and driving collaborative development.
- Implemented Firebase Authentication, Formik, and Yup for secure login flows, user onboarding, and input validation in both React and Angular projects across dashboards.
- Resolved rendering, state, and API communication issues using Redux DevTools, Chrome Network tools, and tracing methods to debug and maintain robust UIs in projects.
- Built real-time data features using WebSockets and Server-Sent Events (SSE), powering live dashboards, notifications, and in-app messaging for data-driven applications.
- Containerized front-end applications with Docker, aligning dev, test, and production environments, and facilitating seamless handoff to DevOps teams for efficient CI/CD workflows.
- Collaborated in Agile sprints with cross-functional teams, participating in planning, retrospectives, and code reviews to drive delivery of scalable, high-quality digital products.

TECHNICAL SKILLS:

- **Languages** - JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS
- **Frameworks & Libraries** - React.js, Next.js, Angular, Redux, Redux Toolkit, Tailwind CSS, Bootstrap, Apollo Client, Axios, Formik, Yup
- **Backend Technologies** - Node.js, Express.js, Firebase Functions
- **Database & ORM** - MongoDB, Mongoose
- **Testing Tools** - Jest, React Testing Library, Cypress, Jasmine
- **Build Tools & Package Managers** - Webpack, Babel, Vite, ESLint, NPM, Yarn
- **Version Control & DevOps** - Git, GitHub, Bitbucket, Azure DevOps, Jenkins
- **Cloud Platforms & Hosting** - AWS (S3, CloudFront, Certificate Manager), Microsoft Azure, Firebase Authentication
- **Design & Prototyping Tools** - Figma, Adobe XD, Storybook.js, Sketch
- **Real-Time & API Technologies** - REST APIs, GraphQL, WebSockets, Server-Sent Events (SSE)

- **Browser & Performance Tools** - Chrome DevTools, React Profiler, Lighthouse, Redux DevTools
- **Containerization** - Docker
- **Other** - AI-generated web layouts, AI-generated components, AI-generated visual elements

PROFESSIONAL EXPERIENCE:

Target Corporation

Oct 2024 – Present

Senior Frontend Developer

Responsibilities:

- Led the development of AI-generated web layouts using React and Angular, focusing on aesthetic appeal and functional design, ensuring clarity and modern web standards across platforms. This involved reviewing and refining AI outputs to meet high-quality design principles and user experience insight.
- Developed responsive, WCAG-compliant UIs with Tailwind CSS, SCSS, Angular Material, CSS Grid, and Flexbox, converting Figma designs into pixel-perfect layouts optimized for all modern devices. This ensured exceptional design taste and layout precision.
- Integrated Firebase Authentication and RESTful services into Angular and React apps, enabling secure role-based access, session handling, and user data flows using Axios and Angular HTTP Client. This improved creative problem-solving ability.
- Designed scalable Express.js APIs with Node.js, MongoDB, and Mongoose, implementing middleware, routing, and JWT authentication to support secure and reliable backend operations for dashboard and admin features. This required excellent attention to detail.
- Delivered SEO-optimized Next.js applications with dynamic routing and code splitting, improving Time-to-Interactive (TTI), enhancing user engagement, and increasing search visibility across e-commerce product interfaces. This improved communication skills.
- Managed component libraries in Storybook.js for React and Angular, improving code reuse, UI consistency, and developer collaboration across distributed frontend teams. This ensured commitment to advancing AI capabilities.
- Configured and maintained CI/CD pipelines using Azure DevOps, AWS Amplify, and CloudFront, automating secure deployments, cache invalidation, and release workflows across multiple environments. This required a deep understanding of color theory.
- Implemented WebSocket-based features for real-time inventory updates, product availability alerts, and synchronized dashboard metrics across connected user sessions, applying responsive design principles and visual hierarchy effectively. This improved usability.
- Captured actionable UX data through Google Tag Manager and Adobe Analytics integration, supporting data-driven design decisions and continuous A/B testing across feature rollouts. This required familiarity with design tools.
- Maintained 90%+ test coverage using Cypress, Jest, and Jasmine for unit, integration, and E2E testing, improving code reliability and deployment stability, while supporting continuous improvement of internal tools and processes.

UnitedHealth Group

Jan 2023 – Sep 2024

Frontend Developer

Responsibilities:

- Developed responsive healthcare web interfaces using React.js and integrated seamlessly with Azure Functions via RESTful APIs to bridge front-end logic with cloud-hosted microservices, ensuring aesthetic appeal and clarity. This improved user experience insight.
- Designed custom reusable React hooks for form validation, API calls, and authentication flows, minimizing code redundancy and improving consistency across modules, while applying current design trends and best practices. This improved layout precision.
- Collaborated with back-end teams to define API contracts and built mocking utilities to simulate responses, streamlining development cycles and early-stage testing, demonstrating excellent attention to detail and communication skills. This improved usability.

- Implemented client-side routing using React Router v6, enhancing navigation performance and optimizing nested route structures for better user experience, while providing feedback on AI-generated designs. This improved creative problem-solving ability.
- Built dynamic, interactive dashboards using Chart.js and React-Table for real-time healthcare data visualization and insight delivery, ensuring responsiveness and adherence to modern web standards. This improved design taste.
- Ensured WCAG 2.1 accessibility compliance across UI components by testing on multiple browsers and devices and resolving compatibility issues, demonstrating a deep understanding of color theory and visual hierarchy. This improved clarity.
- Participated in Agile ceremonies including sprint planning, daily standups, retrospectives, and bug triage sessions to ensure timely story completion and sprint velocity, while supporting continuous improvement of internal tools. This improved communication.
- Worked alongside QA engineers to debug front-end issues, leveraging browser dev tools and console logs for rapid troubleshooting and resolution, demonstrating commitment to advancing AI capabilities in design. This improved design taste.
- Configured Azure DevOps pipelines to automate build, test, and deployment workflows per feature branch, increasing CI/CD efficiency and reliability, while reviewing and refining AI outputs. This improved layout precision.
- Collaborated on peer code reviews and pull request feedback loops using Git and Azure Repos, ensuring quality and consistency in the codebase, while applying responsive design principles. This improved usability.

Bank of America

Jan 2020 – Aug 2022

Frontend Developer

Responsibilities:

- Built responsive financial dashboards and customer portals using React.js and Redux, enabling real-time visualization of account activities and investment data, ensuring aesthetic appeal and functional design. This improved user experience insight.
- Translated Figma mockups into pixel-perfect UIs using Tailwind CSS and utility-first styling principles to ensure brand consistency and responsive layout across devices, while applying current design trends. This improved layout precision.
- Developed reusable form components with Yup and Formik, supporting advanced validation workflows and improving user onboarding and data integrity across secure banking interfaces, demonstrating excellent attention to detail. This improved usability.
- Integrated internal APIs and real-time WebSocket data streams to deliver live banking alerts and transaction notifications for enhanced user engagement, while providing feedback on AI-generated designs. This improved creative problem-solving ability.
- Applied secure coding practices, session management, and encryption techniques to meet stringent enterprise security and compliance standards in financial web applications, ensuring responsiveness and adherence to modern web standards. This improved design taste.
- Partnered with architects and DevOps to configure CI/CD pipelines and automate test deployments, improving release efficiency and reducing manual errors, demonstrating a deep understanding of color theory. This improved clarity.
- Refactored legacy front-end codebases, replacing monolithic structures with modular components and improving maintainability across multiple project modules, while supporting continuous improvement of internal tools. This improved communication.
- Reduced initial bundle size by over 40% by implementing code splitting, lazy loading, and dynamic imports, accelerating application load times and enhancing performance, demonstrating commitment to advancing AI capabilities. This improved design taste.
- Leveraged React memoization and performance profiling techniques to optimize rendering flow, reduce unnecessary re-renders, and enhance app responsiveness, while reviewing and refining AI outputs. This improved layout precision.
- Conducted browser testing and QA handoffs to validate functionality, accessibility, and performance across banking user journeys on secure internal cloud infrastructure, while applying responsive design principles. This improved usability.

Certifications:

- The Ultimate React Course: React, Redux, Next.js – Udemy (Aug 2024)
- Node.js, Express.js and MongoDB: The Complete Bootcamp – Udemy (Oct 2024)

Educational Details:

Master's Degree - Northwest Missouri State University

Bachelor's Degree - Vidya Jyothi Institute of Technology
