

Sairam Konda

San Jose, CA | sairam.konda01@gmail.com | +1(562)713-6776 | linkedin.com/in/sairamkonda01

Professional Summary

Software Engineer with 4+ years of experience in full-stack development and networking solutions. Proven ability to optimize complex systems, increase performance, and reduce development time. Skilled in Java, Python, Spring Boot, and CI/CD pipelines. Recognized for driving technical excellence in Amazon and Optum.

Education

California State University Long Beach, MS in Computer Science Aug 2021 – Aug 2023
• **Coursework:** Algorithms, Artificial Intelligence, Cloud Computing, Data Structures, Software Engineering
CMR College of Engineering and Technology, Bachelor in Computer Science Aug 2015 – Jul 2019
• **Coursework:** Object oriented programming, Machine Learning, Data structures, operating systems

Technical Skills

Programming Languages: Resourceful Knowledge in C,C++, JAVA,SQL, PYTHON, HTML, JAVASCRIPT,CSS.
Tools: Familiar in developing Android apps, Web Servlets using JAVA and Oracle, MS Office, MS Windows, Jenkins, VMWare.

Experience

Software Dev Engineer, Amazon – Cupertino, CA Aug 2023 – PRESENT

- Implemented and optimized the IPIP tunnel consistency checker by developing triggers to simulate kernel-HAL configuration divergence, modifying resync functions for better synchronization tracking, integrating tunnel checks with route validation, and enhancing logging for detailed operational visibility.
- Developed and integrated a robust LAG check in SuperBond tests to ensure synchronization between Kernel and ASIC. Optimized test execution by refining polling intervals, reducing runtime by 50 minutes per test cycle.
- Proposed and implemented an alarm mechanism to monitor SuperBond fallback to ECMP, pending deployment approval. Resolved a critical MTU mismatch issue by identifying and addressing a Day 1 bug in tunnel interfaces.
- Diagnosed and resolved flaky test cases, including Wolverine checker and topology-related issues. Addressed syslog and MAC address errors, collaborating with cross-functional teams to implement permanent fixes.
- Investigated and resolved platform-specific failures in CS8260/CS8000 caused by tunnel inconsistencies. Reviewed and supported fixes for next-hop issues, enhancing the stability and reliability of nightly test runs.

Software Engineer, Optum(UHG), Hyderabad, India Aug 2019 – Jul 2021

- Designed and implemented robust REST APIs using Java and Spring Boot, serving over 1,000 users daily, enabling seamless access to health provider and coverage data.
- Reduced deployment time by 20 percent through the development of optimized CI/CD pipelines using Jenkins and Groovy scripts, ensuring faster and more reliable software delivery.
- Collaborated in an Agile Scrum environment, improving software quality by increasing code coverage by 5 percent through the integration of JUnit and Selenium tests. Participated in cross-functional team discussions, ensuring project deliverables were aligned with client expectations and deadlines.

Software Developer Intern, Host Analytics, Hyderabad, India Oct 2018 – Apr 2019

- Migrated over 10,000 records from legacy systems to a newly designed MySQL database using Java, resulting in 30 percent faster query performance and enhanced scalability.
- Spearheaded backend optimizations in collaboration with a team of five, boosting website performance by 25 percent and increasing user satisfaction ratings by 15 percent.

Academic Projects

Android Application for Sainik Welfare (Java, XML, PHP, MSSQL) Aug 2023

- Developed an intuitive mobile application enabling ex-servicemen to request government aid, replicating and enhancing the functionality of the existing website. Collaborated in a team of 4 to convert 10 existing web pages into a mobile application.
- Focused on developing the login and registration pages using Test Driven Development, which streamlined the login process and achieved a 10 percent increase in efficiency.

Sending exam results to students (Java, XML, PHP, MSSQL) Aug 2020

- Pioneered an innovative solution to alleviate server crashes caused by excessive requests from students accessing result data via a web service.
- Designed and implemented an Android application using JavaMail API enabling college administration to directly dispatch result notifications to students' email addresses.
- Significantly reduced the load on the server infrastructure by 40 percent while ensuring students receive their results.
