SUMMARY

- Innovative Full-Stack Developer with 3+ years of experience in designing, developing, and optimizing scalable applications. Proficient in Java, Python, C++, GoLang, JavaScript, and TypeScript, with expertise in Spring Boot, React.js, Node.js, and microservices architecture. Skilled in building RESTful APIs, cloud-native applications, and CI/CD pipelines (Jenkins, GitLab CI/CD) for seamless deployment.
- Experienced in database management (SQL, NoSQL), Apache Spark for big data processing, and DevOps automation using Docker and Kubernetes. Strong background in system performance optimization, security best practices (OAuth 2.0, JWT, OWASP), and Agile methodologies.
- A problem-solver passionate about delivering high-performance, secure, and efficient software solutions, collaborating with cross-functional teams to drive innovation and improve system reliability.

SKILLS

Programming Languages: Java, Python, C++, GoLang, JavaScript, TypeScript
Web & Frontend Development: React.js, Angular, Redux, HTML5, CSS3, Node.js
Backend Development: Spring Boot, Express.js, RESTful APIs, Microservices, Multithreading
Cloud & DevOps: Docker, Kubernetes, CI/CD (Jenkins, GitLab CI/CD), Cloud Alerting System, AWS Cloud (ECS, SQS, RDS, ECR, IAM, CloudWatch, Secrets Manager, and Step Functions)
Databases & Big Data: SQL (PostgreSQL, Oracle, MySQL), NoSQL (MongoDB), Apache Spark, Redis, Memcached
Machine Learning & Data Analytics: Time Series Analysis, Logistic Regression, Gradient Boosting, Google Analytics
Security & Authentication: OAuth 2.0, JWT, OWASP Security Guidelines, Secure API Development
Testing & Performance Optimization: JUnit, Postman, API Testing, Load Balancing, Algorithm Optimization, Query Optimization
Agile & Project Management: Jira, Scrum, Agile Methodologies, Code Reviews, Version Control (Git, GitHub, Bitbucket)

WORK EXPERIENCE

- Full-Stack Developer**
PTC | March 2023 – Present
- Developed and optimized new features for Codebeamer, enhancing product performance and usability, leading to a 25% increase in user efficiency.
 - Designed and implemented scalable backend services using Java, Python, and C++, ensuring high availability and maintainability.
 - Enhanced database performance by optimizing queries, indexing, and implementing caching strategies (Redis, Memcached), reducing API response time by 30%.
 - Improved frontend performance by optimizing JavaScript code, lazy loading, and reducing bundle sizes, resulting in a 20% faster UI.
 - Integrated CI/CD pipelines (Jenkins, GitLab CI/CD) to automate builds, testing, and deployments, reducing release cycles by 50%.
 - Strengthened security by implementing OAuth 2.0, JWT authentication, and OWASP security guidelines, ensuring a secure and compliant system.
 - Developed and optimized RESTful APIs and microservices, improving system scalability and reducing inter-service communication time by 35%.
 - Containerized applications using Docker and Kubernetes, enabling scalable, cloud-native deployments.
 - Collaborated with cross-functional teams, including hardware, software, and DevOps, to align development processes efficiently.
 - Participated in Agile development, contributing to sprint planning, code reviews, and retrospectives to drive continuous improvement.
- Software Developer**
Infosys Systems (Client: American Express) | India | September 2021 – July 2022
- Developed the Billing Revenue Alerting Framework in GoLang, automating anomaly detection in large-scale data, integrating real-time notifications with the Cloud Alerting System, and reducing on-call workload by 40%.
 - Conducted in-depth customer behavior data analysis, improving conversion rates by 15% through segmentation and targeted recommendations. Enhanced data collection processes by integrating tools like Google Analytics.
 - Designed and implemented RESTful APIs and microservices architectures, improving system scalability and reliability by 25% for high-demand applications.
 - Optimized platform performance by implementing multithreading in Java and refining data structures and algorithms, reducing execution time by 20%.
 - Developed high-volume Spark data pipelines to enable efficient processing and analysis of large-scale datasets.
- Software Developer**
Epam Systems (Client: Oracle) | India | May 2021 – August 2021
- Migrated 50+ warranty services from legacy ColdFusion to Java-based APIs, improving performance by 40% while ensuring seamless integration with Oracle and SQL databases for secure and efficient data handling.
 - Developed and optimized predictive solutions using SOAP web services, improving system intelligence and decision-making.
 - Enhanced build efficiency by 19% through process improvements in Agile development using Jira.
 - Implemented automated testing frameworks for API validation, reducing manual testing efforts by 30% and improving system reliability.
- Software Development Intern**
ServiceNow | India | July 2020 – October 2020
- Developed and implemented the 'Inline Variable-Value Preview' feature for the ServiceNow code editor, integrating front-end and back-end components using TypeScript, React Native, Redux, and Node.js.
 - Optimized developer efficiency by 30% by enabling real-time variable inspection, reducing debugging time and improving workflow within the editor.
 - Enhanced the editor's real-time performance by implementing asynchronous data fetching and state management optimizations, leading to a 25% reduction in UI latency.

EDUCATION

Master of Science in Computer Science University at Albany	NY, USA Dec 2024
Bachelor of Technology in Computer Science Jawaharlal Nehru Technological University 2021	Hyderabad, IN May

PROJECTS

- Educore - E-Learning Microservice App** | Java, React, Spring Boot, Docker | March 2024 | [GitHub](#)
- Designed and deployed a scalable microservices-based e-learning platform, integrating Spring Boot (backend), React (frontend), and MongoDB (database).
 - Enabled personalized content delivery for 10K+ active users across web and mobile platforms, improving engagement and accessibility.
- BlueWave - E-Commerce Application** | Java, React, Spring Boot, Docker, NG INX | May 2023 | [GitHub](#)
- Developed and launched a secure e-commerce platform, integrating Java REST APIs with Spring Boot, a React-based shopping cart, and NGINX as a reverse proxy.
 - Achieved 99.9% uptime and efficiently handled 10K+ daily transactions, ensuring high availability and secure payment processing.
