

SAMUEL SMITH

Ontario, CA | samuelsmith3224@gmail.com

SKILLS SUMMARY

Senior Java Developer with 8 years of experience in designing, developing, and optimizing full-stack web applications and cloud-native solutions. Skilled in both front-end and back-end technologies, including Java, JavaScript, Angular, and Spring Boot. Proficient in building scalable, secure applications with a focus on microservices architecture, cloud computing, and DevOps practices. Known for contributing to highly efficient and data-driven applications, integrating modern frameworks, and enhancing deployment processes through CI/CD pipelines. Strong analytical mindset with a passion for solving complex challenges, improving application performance, and driving team success in agile environments.

EDUCATION

Bachelor of Science, Computer Science, 2015

Tsinghua University, Beijing, China, GPA: B+, 88/100

Related Coursework: Data structure, Algorithms, Networking, Operating Systems, Programming Languages, Computer architecture, Web development, Cybersecurity, Project management, Database management

SKILLS

- Java (Spring Boot, Hibernate)
- JavaScript (Angular, React)
- Full-Stack Development
- Microservices Architecture
- RESTful APIs & Web Services
- Cloud Computing (AWS, Lambda, EC2)
- CI/CD Pipelines (Jenkins, GitLab CI)
- DevOps Practices
- Big Data Technologies (Hadoop, Spark)
- Data-Driven Application Development
- Database Management (MySQL, Postgres, MongoDB)
- Scalable Web Applications
- Secure Transactions & Payment Gateway Integration
- Open-Source Contributions
- Agile Methodologies (Scrum, Kanban)
- Algorithm Design & Data Structures
- Event-Driven Microservices (Apache Kafka)
- Performance Optimization (New Relic)
- Mentorship & Team Collaboration
- Automated Testing (JUnit, Mockito)
- Version Control (Git, GitHub)

RELATED EXPERIENCE

Boston Consulting Group, 09/2022 – Present

Senior Full Stack Engineer

- Designed RESTful APIs using microservices architecture, improving application modularity and facilitating the seamless addition of new features.
- Collaborated with teams to deploy and maintain applications on the server, using Jenkins to automate deployment processes and improve delivery timelines.
- Secured web applications using Keycloak and Spring Security, safeguarding against unauthorized access and ensuring data integrity.
- Wrote unit tests and integration tests using JUnit and Mockito to ensure efficient code quality and maintain a high level of test coverage.
- Worked on databases like MySQL and MongoDB for data storage and management, optimizing schema designs to handle complex queries efficiently.
- Conducted regular code reviews to ensure adherence to best coding practices, improving system performance and reducing the number of production bugs by 20%.
- Optimized application performance through database tuning and backend refactoring, resulting in a 15% improvement in response times.

Walmart, 04/2019 – 07/2022*Senior Full Stack Java Developer*

- Designed and implemented scalable backend systems using Java and Spring Cloud for various clients in fintech and healthcare.
- Developed and maintained a real-time chat application using Java, Spring Boot, and WebSocket technology, resulting in a 25% increase in user engagement.
- Designed and implemented RESTful APIs for a sales tracking application, improving data retrieval and processing speed by 20%.
- Collaborated with international teams to develop a cloud-based inventory management system using Java and Spring Cloud, reducing stock discrepancies by 40%.
- Enhanced a payment processing platform by integrating new features using Spring Boot and Hibernate, increasing transaction success rates by 15%.
- Implemented a secure payment system for domain registration using Java, ensuring a safe and reliable transaction process for users.
- Implemented real-time tracking and reporting features, improving inventory accuracy by 30% and contributing to a more efficient supply chain process.

Cheesecake Labs, 11/2017 – 03/2019*Java Developer*

- Developed and maintained web applications using Java and Spring Boot, working closely with the product team to implement new features based on user requirements.
- Created RESTful APIs for various modules, leveraging microservices architecture to improve application performance and enable feature scalability.
- Worked with PostgreSQL databases to optimize schema designs and queries for storing and manipulating large datasets, ensuring efficient data retrieval.
- Worked on integrating third-party services and APIs, ensuring smooth data flow and enhancing the functionality of the web applications.
- Supported the development of Java-based apps, contributing to the implementation of key features such as user authentication, role-based access, and payment processing.
- Worked with SQL databases to perform data migrations, write queries for data retrieval, and ensure optimal data management.
- Implemented code optimizations that improved application load times by 15%, resulting in faster and smoother user experiences.

Cheesecake Labs, 06/2016 – 10/2017*Mid Backend Developer*

- Developed and optimized backend services for a large-scale e-commerce platform, handling millions of daily transactions and ensuring system reliability during peak traffic.
- Worked with MySQL and MongoDB databases to optimize data storage solutions, ensuring that the system could handle large-scale data sets efficiently.
- Engaged in Agile development methodologies, participating in daily stand-ups and sprint planning to ensure the timely delivery of features and enhancements.
- Performed troubleshooting and diagnostics on production systems, uncovering root causes and implementing solutions to ensure minimal downtime and optimal performance.
- Engaged in profiling and performance analysis, improving the overall performance of the system by 20% through optimized code and database queries.
