PROFESSIONAL SUMMARY

Full Stack Java Developer with 5+ years of experience in designing, developing, and deploying scalable web applications and microservices using Java, Spring Boot, React.js, and cloud technologies (AWS, Azure). Proven expertise in secure RESTful API development, Kafka-based event-driven architecture, and CI/CD pipeline automation. Skilled in Agile methodologies, containerization with Docker/Kubernetes, and database optimization. Adept at enhancing performance, reducing latency, and improving deployment efficiency in dynamic, enterprise-grade environments.

SKILLS

- **Programming & Backend:** Java, Spring Boot, Spring MVC, Spring Security, Spring Batch, REST APIs, Microservices, JPA, Hibernate, JDBC
- **Frontend:** HTML5, CSS3, JavaScript (ES6+), TypeScript, Angular, Responsive Web Design, UI/UX Principles.
- **Database:** PostgreSQL, AWS RDS, MySQL, MongoDB, Redis, DynamoDB, JPA/Hibernate ORM.
- **Cloud/Infra:** AWS (ECS, EC2, S3, RDS, CloudWatch), Terraform, Docker, Kubernetes, CI/CD Pipelines.
- **Data/Integrations:** Apache Kafka, Messaging Queues, Event-Driven Architecture, Third-Party API Integrations.
- **Testing/Quality Assurance:** JUnit, Mockito, Selenium, Postman, TestNG, API Testing, Integration Testing, Code Coverage Tools.
- **AI Tools/Workflow Automation:** ChatGPT, Claude Code, Cursor, End-to-End Workflow Automation (Financial Advisor Processes), Intelligent Insights Generation.
- **Agile Practices/Collaboration:** Agile/Scrum, Sprint Planning, Product Engineering, Technical Decision-Making, Cross Functional Team Collaboration, Startup Environment Experience.

EDUCATION

Masters in Applied Statistics and Analytics, Central Michigan University, Mount Pleasant, MI

May 2024

WORK EXPERIENCE

Northern Trust, USA

Jan 2024 – Present

Java Full Stack Developer

- Developed backend microservices with Java, Spring Boot, Hibernate, and PostgreSQL to modernize wealth management workflows, automate trade settlement, and enable secure fund transfers with compliance reporting on AWS.
- Designed and optimized REST APIs within the Spring ecosystem to handle portfolio updates, transaction processing, and reconciliation, while integrating Kafka event streaming for real-time settlement and audit tracking.
- Deployed modular applications with Docker, Kubernetes, and Terraform on AWS ECS, ensuring scalability, fault tolerance, and compliance-aligned uptime across financial platforms.
- Applied OAuth 2.0, JWT, and TLS encryption with Spring Security to implement role-based authentication and authorization, safeguarding sensitive client and institutional financial data.
- Automated compliance checks and settlement validations using Spring Batch and Hibernate ORM mappings, reducing manual interventions and streamlining T+1 regulatory workflows by over 30
- Improved system performance by over 40(Postgres) tuning, enhancing reliability and accelerating release cycles across the fintech platform.

Accenture, India

Mar 2021 – Aug 2022

Associate Software Engineer

- Established dynamic and responsive user interfaces with React.js, leveraging component-based architecture and advanced state management (Redux, Context API) to deliver scalable, high-performance web applications.
- Built and developed scalable microservices using Spring Boot and RESTful APIs, enhancing application performance, maintainability, and deployment efficiency while reducing downtime through distributed systems best practices.
- Executed efficient data access layers using JPA and Hibernate, leveraging features like lazy loading and caching to minimize database interactions, resulting in a 20
- Migrated monolithic applications to Azure Kubernetes Service, reducing costs by 30via CI/CD pipelines (Azure DevOps, GitHub Actions).
- Crafted and maintained well-documented GraphQL APIs with clear and concise schema definitions, improving the developer experience and reducing integration time for frontend and applications by 60

Java Developer

- Applied Agile/SCRUM by analyzing requirements, collaborating with cross-functional teams, and prioritizing use cases, improving project delivery efficiency.
- Employed legacy systems using Java Database Connectivity (JDBC) and Object Relational Mappers (ORMs) like JPA, ensuring smooth data flow and minimizing manual intervention.
- Created scalable Spring MVC-based web applications, improving system performance by 30 mappings and RESTful endpoints.
- Developed and executed comprehensive JUnit and Mockito-based unit tests, achieving 3015
- Enhanced API performance by optimizing RESTful APIs and GraphQL queries, implementing caching strategies and query optimization techniques that reduced response times by 18
- Boosted latency for critical operations by 20 resulting in a significant improvement in application response time.
