

Satyanarayana Reddy

SOFTWARE DEVELOPMENT ENGINEER

SF Bay Area | nsnreddy12@gmail.com | +1 (774) 498-6111 | [LinkedIn](#)

SUMMARY

Results-driven Software Development Engineer with 4+ years of experience designing and delivering cloud-native, secure, and scalable backend systems. Proficient in Java (8+), Spring Boot, Spring Cloud, Kafka, and SQL, with a strong focus on microservices, event-driven architecture, and data-intensive systems. Adept at implementing data lineage, source-to-target mappings, and metadata management in complex environments. Proven track record in requirements gathering, system integration, TDD/BDD practices, and cross-functional collaboration. Recognized for problem-solving, stakeholder communication, and delivering production-grade solutions aligned with business objectives.

SKILLS

Programming & Scripting:	Java (8+), Python, JavaScript (ES6+), TypeScript, SQL
Backend Development:	Spring Boot, Spring Cloud, Hibernate, Node.js, Express.js, Microservices, System Design
Frontend & UI:	React.js, React Native, Redux, HTML5, CSS3
Messaging & Streaming:	Kafka, RabbitMQ, Event Streaming, Event-Driven Architecture
Cloud & DevOps:	AWS (EC2, S3, RDS, Lambda, API Gateway), Microsoft Azure (App Services, Azure Functions, Azure SQL, Blob Storage, Azure Monitor) Docker, Kubernetes, Jenkins, Terraform, GitHub Actions, CI/CD Pipelines, DevOps
Testing & QA:	TDD, BDD, JUnit, Mockito, Cucumber, JBehave, Unit Testing, Integration Testing, System Testing, Test Automation Pipelines
Databases & Caching:	PostgreSQL, MySQL, MongoDB, SQL Server, Redis, NoSQL
Data & Integration:	REST APIs, GraphQL, Critical Data Elements, Metadata Management, Data Lineage, OAuth2, JWT
Security & Compliance:	HIPAA, SSL/TLS, Secure Coding Practices, Application Security
Soft Skills:	Analytical Thinking, Stakeholder Management, Problem Solving, Teamwork, Communication, Attention to Detail, Agile/Scrum

EXPERIENCE

Software Development Engineer Elevance Health Inc., USA

| JUNE 2023 – TILL DATE

- Spearheaded the development of a **cloud-native policy management system** using Java, Spring Boot, and AWS, reducing manual intervention by **18%** and aligning features with business priorities through effective stakeholder engagement.
- Built a highly interactive and responsive **React.js customer portal**, partnering with UI/UX teams to apply Figma designs and modern UI principles, improving **user engagement by 10%** and accessibility compliance.
- Architected and deployed **event-driven systems** using Kafka (producers, consumers, partitions) and AWS Lambda, reducing response latency by **12%** and enhancing real-time decision-making capabilities.
- Executed end-to-end **data lineage and mapping** across systems, utilizing SQL and metadata repositories to track CDEs and ensure **traceability and compliance** for audits and reporting.
- Led cross-functional technical discussions to assess feasibility of business requirements, translating them into scalable microservices and collaborating closely with QA, DevOps, and data engineering teams.
- Championed **BDD/TDD practices** using JUnit, Cucumber, and Mockito, contributing to code reliability and building out test automation pipelines within Jenkins-based CI/CD workflows.
- Implemented secure integrations with REST APIs using OAuth2 and JWT, upholding strict data privacy regulations and reducing the risk of security vulnerabilities.
- Actively contributed to sprint planning, code reviews, and system design sessions, promoting a culture of **continuous improvement** and architectural excellence.

Software Development Engineer

| AUG 2021 – AUG 2022

ICICI Lombard Insurance, India

- Led backend development of a financial claim automation platform, migrating legacy services into a robust Spring Boot microservices architecture on Microsoft Azure, reducing claim processing time by 22%.
- Designed and integrated telematics and financial data sources into a dynamic risk-pricing engine, enhancing underwriting accuracy by 8% and supporting more data-driven policy decisions.
- Defined and implemented Critical Data Elements (CDEs) as part of enterprise-wide data governance, aligning with internal audit and regulatory requirements.
- Engineered messaging layers with RabbitMQ and Kafka to facilitate scalable and asynchronous processing, contributing to real-time claim status updates and improved system reliability.
- Designed secure and scalable RESTful APIs using OAuth2 and JWT authentication, enabling seamless integration across digital channels while ensuring compliance with financial data security standards.
- Conducted comprehensive data profiling and validation on Azure SQL databases and documented logical/physical data models to support clean data migrations and accurate reporting.
- Mentored junior developers and led Agile ceremonies including daily stand-ups, sprint reviews, and retrospectives, promoting knowledge sharing and delivery consistency across the team.

| JAN 2021 – JUL 2021

Junior Software Developer

ICICI Lombard Insurance, India

- Designed and developed a secure digital document storage and retrieval system using Node.js and Azure Blob Storage, improving operational efficiency and reducing data access time by 25%.
- Maintained and enhanced Java-based backend services with Spring MVC and JSP, increasing transaction processing stability and reducing downtime incidents.
- Supported and later contributed key modules to the migration of legacy insurance applications into a service-oriented architecture (SOA) on Azure, enabling faster product rollouts.
- Collaborated closely with business analysts, QA engineers, and senior developers to deliver production-grade features, demonstrating adaptability and strong communication in a high-paced financial services environment.

EDUCATION

Master of Science in Computer Science

University of Massachusetts Lowell, MA

SEPT 2022 - MAY 2024

Bachelor of Technology in Computer Science and Engineering

Lovely Professional University, India

JUN 2018 - MAY 2022

ACADEMIC PROJECTS

AI-Powered Real-Time Healthcare Monitoring Platform

- Developed a full-stack healthcare monitoring app using React Native, Spring Boot, Node.js, and AWS.
- Implemented event-driven data collection and streaming using Kafka topics and partitions.
- Defined and tracked metadata and CDEs for patient vitals using secure APIs and HIPAA compliance.
- Built test automation pipelines with CI/CD, JUnit, Mockito, and Cucumber for continuous reliability.
- Enabled real-time decision-making for healthcare professionals via live data analytics dashboards.
