Git Hub: <https://github.com/SaiKrishna6670>

Professional Overview

- **Senior DevOps Engineer** with **11+ years** of experience in designing and implementing secure, scalable and cloud-native infrastructures across multi-cloud and hybrid environments. Expert in **CI/CD** automation, **Infrastructure as Code**, container orchestration and **AIOps**-driven observability to enhance deployment velocity, reliability and resilience. Strong background in **DevSecOps**, cloud optimization and continuous compliance, ensuring operational excellence and alignment with enterprise security and governance standards.
- Proven expertise in architecting secure, scalable multi-cloud infrastructures across **AWS, Azure, GCP** and **OCI**, integrating online inference endpoints into **AKS** to enable AI-driven scalability and resilience.
- Advanced proficiency in developing high-performance CI/CD ecosystems using **Jenkins, GitLab CI/CD, GitHub Actions, CircleCI, Bamboo, ArgoCD, Harness, GitHub Copilot for DevOps, CodeAI** and **DeepCode**, ensuring speed, reliability and automation consistency.
- Skilled in Infrastructure as Code (IaC) delivery using **Terraform, Pulumi, CloudFormation, Ansible, Chef, Packer** and **SaltStack**, enabling repeatable, version-controlled and drift-free deployments across hybrid environments.
- Focused on cloud cost and performance optimization through **AWS DevOps Guru, GCP Vertex AI Ops** and **Kubecost AI**, leveraging predictive analytics and AI-based insights for operational efficiency.
- Strong in DevSecOps, integrating **IAM, Vault, SSM Parameter Store, Snyk, Aqua Security, Trivy, Checkov, Security Hub, Snyk AI, Checkmarx AI** and **Darktrace** for proactive security and automated compliance.
- Experienced in AIOps-driven observability using **Prometheus, Grafana, ELK, EFK, Datadog, New Relic, Splunk, Loki, OpenTelemetry, CloudWatch, Moogsoft, BigPanda** and **Dynatrace** for monitoring and issue resolution.
- Strong command of cloud networking and load balancing through **VPCs, Subnetting, Route Tables, NAT Gateways, Security Groups, ALB** and **NLB**, ensuring performance, scalability and low-latency architecture.
- Expert in secure interconnectivity and DNS management using **Private Link, VPN, VPC Peering, Route53, Cloudflare** and **Infoblox**, optimizing traffic flow and enforcing zero-trust networking.
- Hands-on expertise in **Python, Bash, Go, PowerShell** and **JavaScript** for automation, orchestration and intelligent operations across CI/CD and infrastructure workflows.
- Comprehensive experience managing **PostgreSQL, MySQL, MongoDB, Redis, Amazon RDS, Aurora, DynamoDB** and **Cassandra**, while integrating **AWS SageMaker** for predictive analytics and ML-driven automation.
- Proficient in driving collaboration across **Dev, QA, Security, Data** and **PMO** teams to align DevOps roadmaps with business outcomes and compliance priorities.
- Strong background in reliability engineering and incident management using **PagerDuty, Opsgenie, VictorOps, StatusCake, UptimeRobot, PagerDuty AIOps** and **xMatters**, achieving faster detection and recovery cycles.
- Advocate of Infrastructure as Code best practices using **Terraform, Pulumi, Ansible, SaltStack** and **Chef**, ensuring automation standardization and version integrity across environments.
- Well-versed in compliance and governance frameworks such as **SOC 2, ISO 27001, HIPAA, PCI-DSS** and **GDPR**, embedding regulatory alignment into DevOps workflows.
- Experienced in continuous compliance monitoring using **AWS Config, GCP Security Command Center, Azure Defender** and **OpenSCAP** for cloud security posture management and audit readiness.
- Proficient in designing fault-tolerant architectures using **Auto Scaling Groups, Multi-AZ deployments, CloudFront, S3 replication** and disaster recovery strategies to ensure business continuity.
- Skilled in containerization and orchestration with **Docker, Kubernetes, Helm, EKS, GKE, AKS** and **Kustomize**, driving deployment consistency and platform scalability.
- Focused on secure service-to-service communication leveraging **Service Meshes (Istio, Linkerd, Consul), Zero Trust architectures** and **mTLS**, reinforcing end-to-end encryption and access integrity.
- Expert in defining and governing reliability metrics such as **SLOs, SLIs** and **SLAs** using **Noble9, Grafana** and **Google Cloud SLO Monitoring**, aligning engineering goals with business reliability targets.
- Experienced in enabling self-healing and auto-scaling mechanisms through **KEDA, HPA, Cluster Autoscaler** and **AWS Auto Scaling**, reducing manual intervention and ensuring adaptive resilience.
- Proficient in architecting intelligent alerting and compliance pipelines with **Slack, Teams, Open Policy Agent (OPA), HashiCorp Sentinel, Rego** and **Conftest** for automated continuous improvement.

Work History

Client: Franciscan Health, Lafayette, IN
Senior DevOps Engineer

Duration: -Jul-2023-Present

Project Responsibilities:

- Architected and migrated mission-critical loan management applications to **AWS (EC2, VPC, RDS, SageMaker)** and **GCP (GKE, Cloud SQL, Vertex AI Ops)**, building a resilient multi-cloud platform that improved scalability and reduced costs by 30%.
- Automated infrastructure provisioning with **Terraform and AWS CloudFormation**, transforming deployments from manual, error-prone processes into consistent, repeatable and auditable workflows.
- Engineered and operated production-grade **Kubernetes (EKS/GKE)** clusters supporting 100+ microservices, enabling zero-downtime upgrades and high-availability deployments.
- Designed and optimized robust CI pipelines using **Jenkins, GitLab CI/CD and Harness**, accelerating development velocity, reducing integration risks and enabling smoother collaboration across distributed teams.
- Implemented advanced continuous delivery pipelines with **AWS CodePipeline and Argo CD**, achieving consistent, reliable and fully automated releases across multiple environments.
- Standardized infrastructure automation through **Terraform and Ansible**, eliminating configuration drift, strengthening repeatability and improving environment stability at scale.
- Engineered scalable, reusable CI/CD pipeline frameworks in **Jenkins**, leveraging **GitHub Copilot for DevOps**, and **DeepCode** for intelligent code and pipeline quality checks, reducing setup time from weeks to days.
- Strengthening cloud security by enforcing least-privilege access via **AWS IAM** and **HashiCorp Vault**, integrating **Snyk AI, Checkmarx AI, Aqua Security** and **Darktrace** to reduce compliance risks and unauthorized access.
- Integrated automated security gates into CI/CD pipelines using **SonarQube, Nessus and Snyk AI**, blocking high-risk vulnerabilities pre-deployment and reducing production exposure by 60%.
- Accelerated incident resolution by **40%** through proactive observability pipelines using **Prometheus, Grafana, Moogsoft and BigPanda**, enabling real-time anomaly detection and AIOps-driven remediation.
- Centralized enterprise-wide logging with a scalable **ELK Stack** integrated with **Splunk** and **Datadog**, cutting mean time to root cause analysis by **50%** and improving cross-application visibility.
- Enhanced cloud observability by designing **Amazon CloudWatch metrics, Dynatrace dashboards and Datadog monitors**, resulting in faster issue detection and >30% reduction in downtime incidents.
- Architected secure, scalable hybrid networks across **AWS and GCP** by implementing **VPC design, subnet segmentation and inter-cloud peering**, ensuring low-latency connectivity and compliance with security controls.
- Increased fault tolerance and reliability by deploying **Ingress controllers, Kubernetes-native load balancers and automated failover strategies**, optimizing traffic distribution and achieving 99.99% service availability.
- Spearheaded automation initiatives by designing and deploying operational workflows with **Python, Bash and AWS Lambda**, significantly reducing manual overhead and accelerating delivery timelines.
- Led development of **custom Python APIs** within CI/CD pipelines, integrating **PagerDuty AIOps, OpsGenie** and **xMatters** to automate approvals and enforce enterprise-grade release governance.
- Executed zero-downtime database migrations to **Amazon RDS (PostgreSQL/MySQL)** using blue-green deployment strategies, ensuring continuous business operations.
- Enhanced database scalability and performance by deploying **Amazon Aurora clusters**, supporting high-volume financial transaction processing with reliability.
- Partnered with **SRE and DevSecOps** teams to embed observability, compliance and security controls (via **Moogsoft, Darktrace, Aqua Security**) into SDLC pipelines, aligning with governance standards.
- Modernized legacy workloads by containerizing applications with **Docker** and orchestrating production deployments on **Kubernetes (EKS/GKE)**, enabling cloud-native scalability.
- Optimized release governance by embedding **Postman API testing** into CI/CD pipelines, integrating **Harness and GitHub Copilot for DevOps** to enable early defect detection and accelerate deployment confidence.
- Safeguarded mission-critical loan processing by overseeing 24/7 production support using **PagerDuty AIOps and BigPanda**, ensuring rapid incident resolution and uninterrupted 99.9% service availability.
- Championed Agile transformation by directing sprint tracking in **Jira** and formalizing documentation in **Confluence**, driving organizational transparency and cross-functional efficiency.
- Unified globally distributed teams by institutionalizing **Slack** as a collaboration hub, streamlining decision-making and accelerating incident triage across time zones.

- Reduced deployment risk through **Blue-Green, Canary and AI-optimized rollouts** using **AWS DevOps Guru** and **Kubecost AI**, ensuring seamless production transitions.

Client: CPP Investments, New York, NY
Senior DevOps Engineer

Duration: May-2020-Jul-2023

Project Responsibilities:

- Led a seamless **Azure-to-AWS** cloud migration by architecting and deploying scalable infrastructure using **AWS CloudFormation**, ensuring zero downtime and uninterrupted service continuity.
- Streamlined and optimized **AWS EC2, S3, VPC** and **IAM** infrastructure by leveraging **Terraform** for automation, boosting performance and reducing operational costs.
- Automated infrastructure provisioning with **Ansible**, ensuring 100% deployment consistency and eliminating environment drift across staging and production environments.
- Engineered scalable, fault-tolerant CI/CD pipelines using **Jenkins, GitHub Actions** and **AWS CodePipeline**, cutting deployment time by 60% and enabling daily production releases.
- Strengthened release quality and delivery security by integrating **SonarQube** and **JUnit** into CI workflows, eliminating critical bugs pre-production and improving overall code integrity.
- Accelerated containerized application delivery by implementing **Docker** and **Amazon ECR**, ensuring seamless, version-controlled deployments across diverse environments.
- Standardized infrastructure provisioning with **Terraform, Ansible** and **AWS CodeBuild**, ensuring consistent environments and minimizing deployment failures.
- Increased deployment resilience by implementing blue-green and canary release strategies with **AWS Elastic Beanstalk** and **AWS CodeDeploy**, ensuring safer rollouts and minimal downtime.
- Accelerated DevOps workflows by automating complex deployments and configuration management with custom **Python** and **Shell** scripts, improving delivery efficiency.
- Strengthened enterprise cloud security by enforcing least-privilege policies with **AWS IAM** and **Azure AD**, aligning access management with compliance and audit frameworks.
- Embedded continuous security testing into CI/CD pipelines using **Trivy, Aqua Security** and **AWS Inspector**, enabling early vulnerability detection and faster remediation.
- Secured sensitive assets by implementing credential and secret management workflows with **HashiCorp Vault** and **AWS Secrets Manager**, ensuring adherence to industry best practices.
- Enhanced operational observability by centralizing production logs and analytics through the **ELK Stack** and **Fluentd**, enabling faster triage and root cause identification.
- Established full-stack observability with **Prometheus, Grafana** and **AWS CloudWatch**, enabling real-time alerting, proactive monitoring and rapid anomaly detection.
- Minimized outage recovery time by integrating **Jaeger** and **OpenTelemetry** for distributed tracing, improving end-to-end visibility and diagnostic accuracy across microservices.
- Architected secure, scalable multi-tier network infrastructures with **AWS VPC, Subnets, NAT Gateways** and **Security Groups**, enabling fault-tolerant, production-grade services.
- Architected cross-AZ load balancing and automated failover strategies with **AWS ELB/ALB**, delivering uninterrupted business continuity and resilient service availability.
- Optimized global application performance and resiliency by configuring latency-based DNS routing and health checks in **AWS Route 53**, ensuring seamless user experiences across regions.
- Increased DevOps velocity by automating system maintenance, log processing and configuration workflows with **Python** and **Bash**, freeing developer capacity for innovation.
- Developed scalable internal tooling with **AWS SDK (Boto3)** to enable self-service infrastructure provisioning and seamless workload scaling across environments.
- Orchestrated zero-downtime enterprise database migrations from **Azure SQL** to **Amazon RDS (MySQL, PostgreSQL)**, ensuring seamless cutovers with full data integrity.
- Enabled resilient high availability and disaster recovery by implementing automated backups, cross-region replication and multi-AZ failover in **Amazon RDS** and **DynamoDB**.
- Spearheaded integration of **CI/CD pipelines** and infrastructure automation into Agile workflows, accelerating delivery and embedding continuous deployment practices.
- Championed DevOps culture across the **SDLC** by operationalizing critical **AWS** workloads with **CloudWatch Alarms**, scripted remediation and SLA-driven recovery processes.

Project Responsibilities:

- Automated large-scale infrastructure tasks and deployment workflows with **Python** and **PowerShell**, increasing operational efficiency and eliminating manual errors across environments.
- Orchestrated cross-functional collaboration by embedding **Slack** into DevOps workflows, accelerating incident triage and strengthening operational responsiveness.
- Governed source control with **Bitbucket**, implementing enterprise branching strategies and pull request workflows to safeguard code quality and streamline CI pipelines.
- Standardized cloud infrastructure provisioning with **ARM Templates**, delivering consistent, version-controlled **Azure** deployments in alignment with IaC best practices.
- Automated configuration compliance through **Puppet**, ensuring environment integrity and eliminating drift across development, staging and production systems.
- Provisioned and optimized mission-critical **Azure** services including **Virtual Machines (VMs)**, **Blob/Table/Queue Storage** and **Azure Functions**, enabling resilient, cloud-native workloads.
- Architected and optimized CI/CD pipelines in **Azure DevOps**, automating build, test and release cycles to accelerate delivery velocity and reduce release risks.
- Deployed and orchestrated containerized microservices on **Azure Kubernetes Service (AKS)**, improving scalability, resiliency and resource efficiency in production environments.
- Architected secure, segmented networks with **Azure Virtual Network (VNet)**, implementing subnet design, traffic controls and access policies to ensure enterprise-grade isolation and compliance.
- Engineered globally distributed workloads with **Azure Cosmos DB**, delivering elastic scalability and low-latency data access to power high-volume, business-critical applications.
- Directed artifact lifecycle management with **Artifactory** and **Nexus**, establishing enterprise standards for versioning, traceability and secure delivery across CI/CD pipelines.
- Fortified remote system access through **SSH**, implementing key-based authentication and comprehensive session auditing to ensure governance and regulatory compliance.
- Strengthened cloud security posture by enforcing secret management policies with **Azure Key Vault**, enabling secure credential storage, granular access control and automated rotation.
- Deployed proactive infrastructure monitoring with **Nagios**, configuring intelligent alert thresholds to detect anomalies early and prevent service disruptions.
- Elevated observability by centralizing and correlating logs in **Azure Log Analytics**, accelerating root-cause identification and improving incident resolution times.
- Strengthened code quality and security posture by embedding **Code Climate** into CI workflows, enabling early remediation of vulnerabilities and technical debt.
- Architected automated backup and disaster recovery strategies with **Azure Backup**, ensuring enterprise-grade data protection and rapid restoration during failures.

Project Responsibilities:

- Developed scalable backend services and infrastructure tooling using **Go**, enabling high-performance, concurrent processing in distributed cloud environments.
- Orchestrated project documentation in **Confluence**, improving sprint planning, cross-team alignment and long-term knowledge retention across engineering teams.
- Standardized source control practices in **Git**, enforcing branching, merging and pull request workflows to ensure code quality, auditability and streamlined collaboration.
- Provisioned and automated infrastructure using **Terraform**, implementing infrastructure as code (IaC) to deliver consistent, version-controlled and error-free environments.
- Automated configuration management tasks with **SaltStack**, ensuring uniform deployments across staging and production environments while reducing configuration drift.
- Deployed and managed cloud workloads on **Azure**, leveraging native services for compute, storage and networking to deliver resilient and scalable solutions.
- Engineered CI/CD pipelines in **CircleCI**, automating builds, tests and deployments to accelerate delivery cycles and reduce release failures.

- Containerized and orchestrated microservices with **OpenShift**, improving workload portability, scaling efficiency and release consistency across environments.
- Established secure, low-latency hybrid cloud connectivity with **Azure Express Route**, supporting seamless communication between on-prem and cloud infrastructure.
- Automated infrastructure operations and monitoring scripts using **Bash** and **Python**, reducing manual overhead and improving system reliability.
- Administered and tuned **MySQL** databases, implementing backup routines, performance tuning and secure access management to ensure data integrity and availability.
- Managed artifact storage and versioning pipelines via **Nexus**, ensuring traceable, secure deployment of application components across environments.
- Monitored infrastructure and application health using **Datadog**, configuring real-time dashboards and alerts to detect and resolve performance bottlenecks proactively.
- Secured sensitive secrets, tokens and credentials with **HashiCorp Vault**, enforcing zero-trust access policies and enabling automated credential rotation.
- Centralized log aggregation and analytics with **Splunk**, improving system visibility, expediting root-cause analysis and strengthening incident response workflows.
- Implemented disaster recovery strategies with **Azure Site Recovery**, ensuring business continuity through automated failover and RTO-compliant recovery processes.

Client: Neuberger Berman, New York, NY
Linux Administrator

Duration: Jul-2013-Aug-2015

Project Responsibilities:

- Administered and maintained production-grade **Linux servers** (Red Hat, CentOS and Ubuntu), ensuring system stability, performance and 99.99% uptime across mission-critical environments.
- Managed users, groups and access controls using standard **Linux CLI utilities**, enforcing security policies and supporting compliance with internal audit requirements.
- Monitored system health and resource utilization with **top**, **vmstat**, **iostat** and custom scripts, proactively identifying and resolving performance bottlenecks.
- Automated routine system administration tasks using **Bash** and **Python**, reducing manual workload and improving operational efficiency.
- Hardened Linux systems by configuring **iptables/firewalld**, enforcing **SELinux/AppArmor** policies and disabling unnecessary services to minimize attack surface.
- Conducted log analysis and system troubleshooting using **rsyslog**, **journalctl** and audit logs, reducing incident resolution time and improving root cause analysis.
- Performed regular system patching, kernel upgrades and package updates using **YUM**, **APT** and custom repositories, ensuring security and version compliance.
- Configured and supported network file systems including **NFS**, **Samba** and **FTP**, enabling secure, reliable file sharing between servers and user endpoints.
- Scheduled and managed **cron jobs** and background processes to automate backups, log rotation, patch checks and system monitoring tasks.
- Provided 24/7 support for critical Linux infrastructure, participating in on-call rotations and resolving high-severity issues under tight SLAs.

Academic Qualifications

- Bachelor's Degree

Certified Achievements

- Google Cloud Certified Generative AI Leader Certification
- AWS Certified Cloud Practitioner
- Microsoft Certified Azure Administrator Associate
- Microsoft Certified Security Engineer Associate
