LINUX OPERATIONS ENGINEER

PROFILE

Linux Operations Engineer with over 6 years of hands-on experience in architecting, deploying, and maintaining mission-critical IT infrastructures. Skilled in managing complex hybrid environments and employing automation to ensure high availability, and scalability across cloud and on-premise infrastructures. Proficient in the configuration, patching, troubleshooting, and performance optimization of Linux distributions. Specialized in automating infrastructure operations using DevOps tools such as Ansible, Ansible Tower, Git, and Gitlab, Extensive expertise in virtualization technologies, AWS services, exposed to Docker, and Kubernetes. Well versed in managing NFS, LVM, NIC bonding, and Apache web server configuration. Expertise in trading application support, FIX protocol troubleshooting, and market connectivity for low-latency environments. Strong background in incident and service request management,

SKILLS

Operating Systems:

Linux (RHEL | CentOS | Oracle Linux) | Windows

Automation & Configuration Management:

Ansible | AWX Tower | Terraform | Ansible Playbooks | Bash/Shell Scripting

Virtualization & Containerization:

VMware vSphere | vCenter | ESXi | vMotion | Snapshots | High Availability (HA) | Distributed Resource Scheduler (DRS) | Docker (Dockerfile | Volumes | Docker Compose) | Kubernetes

Cloud Platforms:

AWS (EC2 | EBS | S3 | IAM | CloudFormation | CloudTrail | CloudWatch | ELB) | EFS |

Networking & Security:

TCP/IP | DNS | DHCP | NFS | NIC Bonding | FTP/TFTP | ILO | IDRAC | Firewall Management | Pod Security Policies | Network Troubleshooting (Tcpdump | Traceroute)

Storage Solutions:

RAID | Logical Volume Management (LVM) | SAN | NAS | Partitioning (FDISK | GDISK)

Monitoring & Logging:

Prometheus | Nagios | Splunk | AWS CloudWatch | System Performance Tuning

Ticketing & Incident Management:

ServiceNow | JIRA | BMC Remedy | ITIL Practices | SLA Compliance

Version Control & Collaboration Tools:

Git | GitHub | GitLab | CI/CD Pipelines | Branching | Merging | Commit Management

WORK EXPERIENCE

PNC Bank - Pittsburgh, PA

Linux Operations Engineer Jan 2023 – Jan 2025

- Demonstrating extensive expertise in the installation, configuration, administration, and maintenance of Linux-based systems, ensuring optimal performance, stability, and reliability across production and development environments.

- Conducting live VM migrations using VMware vMotion, performed advanced cloning, and leveraged snapshot technologies to safeguard system integrity during updates, mitigating risks and enabling effective rollback processes.
- Creating and executing complex Ansible automation scripts for the orchestration of system deployments, continuous health monitoring, and automated testing, significantly increasing operational efficiency and reducing manual intervention.
- Developed custom Ansible automation scripts to monitor trading system performance, automate service restarts, and reduce manual intervention.
- Provided real-time support for trading applications, monitoring order flow, trade executions, and FIX protocol connections across major exchanges (NYSE, NASDAQ, BATS, IEX).
- Advanced proficiency in system monitoring, patch management, software deployments, configuration, and user management automation using Ansible playbooks, with extensive use of Ad-hoc commands to expedite system administration tasks.
- Proficient in architecting and managing cloud infrastructures with Amazon Web Services (AWS), including services such as S3, IAM, ELB, VPC, EBS, CloudWatch, and CloudTrail, to optimize performance and scalability.
- Utilizing AWS tools like CloudFormation to provision and manage AWS resources, streamlining cloud infrastructure deployment while ensuring adherence to best practices.
- Effectively administering AWS cloud environments by utilizing CloudWatch for real-time EC2 performance monitoring, setting up automated alerts and triggers to proactively address system anomalies and performance degradation.
- Fronted the deployment and lifecycle management of cloud-native applications using Kubernetes, orchestrating containerized environments across hybrid infrastructures to meet scalability and high-availability requirements.
- Developed comprehensive documentation and optimized server decommissioning workflows, ensuring alignment with audit requirements and promoting transparency across IT operations.
- Applying advanced kernel tuning and system optimization techniques to enhance resource utilization, boost system throughput, and ensure peak performance under high workloads.
- Containerizing applications with Docker, managing private repositories, and building optimized images to streamline application delivery pipelines and facilitate rapid deployments.
- Expert in Git for source code management, effectively handling version control of Ansible playbooks, configuration files, and Docker artifacts to support consistent and reliable deployments.
- Integrating and configuring Prometheus for real-time system monitoring and alerting, enabling detailed metric collection and analysis across infrastructure components to proactively identify and resolve performance bottlenecks and ensure system reliability.
- Securing Kubernetes clusters by implementing robust network policies and configuring Pod security policies to safeguard containerized workloads against potential vulnerabilities and misconfigurations.
- Employing the Jira ticketing tool to track issues and bugs in software development projects.

Dell Technologies - NYC, NY

Systems Administrator Apr 2019- Oct 2022

- Managed OS testing, staging, release, and deployment processes, ensuring seamless updates and maintaining system stability in production environments.
- Addressed storage allocation challenges, performed precise disk partitioning, and optimizing storage performance for mission-critical applications.
- Implemented RAID configurations across enterprise-grade servers to enhance data redundancy, optimize performance, and ensure fault tolerance.
- Administered logical volumes, including extending, migrating, activating, and deactivating volumes on-demand, enabling dynamic storage management to meet operational requirements.
- Recovered and restored server availability using ILO for HP servers and IDRAC for Dell servers, minimizing downtime and ensuring business continuity.
- Configured NFS server and client architectures for secure network-based data sharing, optimizing access control and resource sharing across the network.

- Configured and optimized NIC bonding in different modes, ensuring network redundancy and improved throughput.
- Automated job scheduling using Anacron to streamline recurring system tasks, ensuring reliable execution even in system outages.
- Collaborated with development teams to troubleshoot server-side performance bottlenecks, supported new feature deployments, and provided backend infrastructure support.
- Enforced the implementation of SUDO across production environments, eliminating direct root access and enhancing security protocols.
- Utilized network diagnostic tools such as Tcp dump and traceroute for advanced network troubleshooting, efficiently identifying and resolving connectivity and performance issues.
- Specialized in Docker containerization, ensuring applications and their dependencies are packaged into standardized, portable units, enabling integration into development, testing, and production environments.
- Performed advanced hardware installations, integrated systems with Active Directory, and resolved complex technical issues to maintain infrastructure integrity.
- Configured and maintained essential network services such as TCP/IP, DNS, DHCP, NFS, and TFTP, ensuring high availability and reliable network performance.
- Configured and optimized NIC bonding & TCP/IP settings to reduce network congestion and improve latency-sensitive trading applications.
- Developed advanced Bash scripts to automate repetitive administrative tasks, improving overall system efficiency and reducing manual errors.
- Implemented password-less SSH authentication for secure, efficient, and automated system access management across multiple servers.
- Handled incident management and ticket resolution using the BMC Remedy platform, providing timely support to address and resolve operational issues across the IT infrastructure.
- Supported trading infrastructure, ensuring high availability and reliability of market data processing and order routing systems.

Amazon.com, Inc – Edison, NJ

IT Support Technician April 2018 – Mar 2019

- Collaborated with Linux Administrators and Engineers in server racking, stacking, and cabling management to maintain network connectivity and hardware organization.
- Developed and implemented scripts to automate repetitive administrative tasks, improving efficiency and reducing manual workload.
- Installed, upgraded, and maintained software packages, updated drivers and replaced faulty parts.
- Managed user accounts, including creation, modification, and deactivation, ensuring secure access control across systems.
- Conducted initial system issue diagnosis and troubleshooting, resolving technical problems in a timely manner.
- Coordinated with operations and technical support teams to provide timely communication and updates on system performance and issues.
- Delivered comprehensive technical support to Amazon corporate employees, ensuring timely resolution of hardware and software issues to maintain productivity.
- Provided in-person support for a wide range of IT-related issues, including troubleshooting systems, managing hardware, and addressing software-related inquiries.
- Traveled between local buildings and occasionally to other U.S. cities to provide on-site IT assistance and maintain infrastructure continuity.
- Managed ticket queues, maintaining a high level of productivity and quality support while handling fluctuating case volumes.
- Ensured customer satisfaction by providing escalation support for complex issues requiring advanced troubleshooting and communicating next steps to resolution.
- Created, updated, and maintained Standard Operating Procedures (SOPs) to enhance the team's knowledge base and improve operational efficiency.

- Participated in technical projects, ensuring deadlines were met and deliverables were completed on time, while identifying opportunities for process improvement.

EDUCATION

Associates in Arts - Graduated 2022

Rutgers Expected Graduation - 2026

Training Red Hat Certified Systems Administrator

Training Ansible Red Hat Automation Certified
