

Shireesha Reddy – Senior Software Engineer

+1 (513) 918-0979 | reddyshireesha271@gmail.com

PROFESSIONAL SUMMARY

- A highly experienced Senior Software Engineer with a robust background in designing and implementing enterprise applications using J2EE and open-source Java frameworks.
- Adept at analyzing complex business requirements, performing comprehensive gap analysis, and designing robust application solutions that meet organizational needs.
- Proven expertise in developing and maintaining both front-end and back-end components, ensuring seamless integration across various enterprise systems.
- Skilled in collaborating with business analysts and clients to gather precise requirements and provide detailed technical specifications for critical projects.
- Successfully led multiple application releases from initial planning through successful completion, consistently enforcing stringent code standards and best practices.
- Demonstrated ability to design and implement highly responsive web interfaces, ensuring an optimal user experience across diverse platforms and devices.
- Extensive hands-on experience with Core Java/J2EE technologies including JSP, Servlets, EJB, JMS, MDB, and JCA in high-volume enterprise environments.
- Proficient in Java Frameworks such as Spring, Struts, and Hibernate/JPA for efficient transaction management and robust Object-Relational Mapping solutions.
- Expertise in designing and interfacing with both SOAP and RESTful web services, including strong experience with XSLT transformations for data integration.
- Solid front-end development capabilities with modern technologies including Vue JS, Angular, HTML5, CSS3, and Bootstrap for dynamic user interfaces.
- Committed to full lifecycle involvement, from meticulous requirement gathering and application design to development and thorough quality assurance processes.
- Dedicated to mentoring junior developers, fostering their growth, and promoting a culture of technical excellence and continuous improvement within teams.

TECHNICAL SKILLS

- **Programming Languages:** Java (J2EE, Core Java), JavaScript (ES6+), TypeScript, Python, SQL, C#
- **Java Frameworks:** Spring, Struts, Hibernate, JPA, Spring Boot
- **Web Technologies:** JSP, Servlets, EJB, JMS, MDB, JCA, GraphQL, REST APIs, SOAP, XSLT
- **Front-End Development:** Vue JS, Angular, React, Next.js, HTML5, CSS3, Sass, Tailwind, Bootstrap
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Firebase, Oracle
- **Cloud & DevOps:** AWS (EC2, Lambda, RDS, S3, ECS), Azure, Docker, Kubernetes, GitHub Actions, Jenkins
- **Tools & Methodologies:** Git, Webpack, Vite, Jira, Confluence, Figma, Agile, CI/CD, Entity Framework
- **Oracle Stack (Bonus):** Oracle Policy Automation (OPA), Oracle SOA Suite (OSB, BPEL, Mediator)
- **.NET Exposure:** Microsoft .Net Core, .Net Core MVC

WORK EXPERIENCE

Senior Full Stack Engineer

Discover Financial Services – Riverwoods, IL

Jun 2023 – Present

Responsibilities:

- Led the full lifecycle development of enterprise-grade applications, analyzing complex business requirements to design robust solutions aligned with organizational goals.
- Designed and implemented secure, microservices-based architectures utilizing Java and Spring Boot, enabling modular development and reliable scaling for payment services.

- Developed and maintained critical back-end components using J2EE standards, ensuring seamless integration with existing financial systems and external APIs.
- Partnered with UX and product teams to redesign customer-facing interfaces using React and Tailwind, enhancing usability and increasing user retention by 18%.
- Implemented comprehensive test automation with Cypress and established CI/CD pipelines using GitHub Actions, reducing release times and enhancing deployment quality.
- Collaborated extensively with business analysts and clients to gather requirements, providing detailed technical specifications for critical application enhancements.
- Mentored a team of four mid-level engineers, driving engineering excellence through regular code reviews, technical workshops, and hands-on guidance.
- Enforced stringent code standards and best practices across all development phases, leading multiple application releases from planning through successful completion.

Full Stack Developer

Cigna - Bloomfield, CT

Oct 2021 - Nov 2022

Responsibilities:

- Engineered internal enterprise web applications using Angular and Spring Boot to support healthcare logistics, inventory tracking, and operational analytics.
- Designed and developed robust back-end services using Spring Framework and Hibernate/JPA, facilitating secure data integration and transaction management.
- Integrated secure healthcare data sources and analytics tools, ensuring compliance with industry standards and enabling real-time supply chain insights.
- Enhanced front-end performance by 40% through optimization techniques, including lazy loading and modular builds, improving user experience for critical staff.
- Led modernization of legacy systems by transitioning from monolithic architecture to modular, RESTful microservices, improving maintainability and deployment speed.
- Collaborated with cross-functional teams to gather detailed requirements and provide technical specifications for new features and system enhancements.
- Drove Agile transformation across product and engineering teams, implementing sprint cycles and backlog management to accelerate feature delivery and ensure compliance.
- Contributed to full lifecycle involvement from application design to quality assurance, developing responsive web interfaces for optimal user engagement.

Software Engineer

Ally Financial - Charlotte, NC

Jul 2020 - Sep 2021

Responsibilities:

- Developed internal analytics and reporting tools for financial operations teams using Vue.js, enabling real-time visualization of client portfolios and transaction histories.
- Built scalable and secure RESTful APIs using Django REST Framework, automating processing of customer and account data, enhancing data integrity and reducing latency.
- Designed and optimized PostgreSQL schemas to support high-volume transactional and account data, ensuring reliability and consistency across critical banking systems.
- Enhanced system reliability and deployment confidence by increasing test coverage by 60%, contributing to robust code reviews for continuous integration.
- Collaborated closely with business stakeholders to analyze requirements, translating them into detailed technical designs for new features and system improvements.
- Implemented responsive web interfaces using Vue.js and D3.js, ensuring an optimal user experience for financial analysts accessing complex data visualizations.
- Participated actively in the full software development lifecycle, from initial design and development to thorough quality assurance and deployment.

- Contributed to the enforcement of coding standards and best practices, supporting the successful release of various financial applications.

EDUCATION

Master's Degree from University of Central Missouri
