

Venkat Shiva Kumar Yanamandra

Senior QA Lead

yanamandra.shiva@gmail.com | +1 (469) 231-7146 | Work Authorization: H1B

PROFESSIONAL SUMMARY

I am a well experienced QA Lead looking for an opportunity in your organization.

Work Experience Highlights:

- 15 years of experience in IT, working as a senior QA consultant and QA Lead taking care of offshore and onshore QA deliverables.
- Strong focus on QA / Testing Roles with advanced data science or analytical roles in significant projects in data visualization tools like Tableau , Power BI, Python specific libraries for analytics.
- 5+ years' experience using ADA Compliance testing tools, such as AccVerify, JAWS, etc
- Understanding of software testing methodologies and quality assurance processes (Quality Assurance, User Acceptance, System Integration, Accessibility, Performance, Regression, Post Deployment Validation, Data Conversion)
- Experience in predictive analytics and machine learning models.
- Extensive experience on domain specific applications for finance for high growth industries like Oracle, Pennsylvania Power and Light Limited, Schwab Bank.
- Hands on use of SQL for analytics driven insights.
- Responsible for managing the QA Release items and reporting status to Program Manager at client side and delivery manager at Implementation partner front.
- Ability to work in teams in a diverse/ multiple stakeholder environment.
- During my career I have worked in all test activities and was involved in development, execution and maintenance of automation framework/scripts.
- Currently working as an Onsite Test Lead in Verizon.
- Previously worked as a Test Lead with Cigniti interfacing with QA team from Deloitte and TCS, QA lead with Capgemini and Infosys (USA) leading the efforts of manual testing and automation testing teams spread across different locations (across India and USA).
- Worked as a senior test lead with Wipro USA taking care of onshore and offshore QA deliverables reporting to delivery manager.
- Experience in team building, recruiting and delivering high quality software tests.
- Experience in process improvements, implementing new tools and framework for improving the testing coverage.
- Experience working as a test lead from Onsite and designing the overall QA Architecture & Processes.
- Worked for QA Centre of Excellence implementing several values added in the tests involved in. Interacted and submitted the value adds from the implementation company's side to various clients across USA(New York ,San Antonio, Texas, Atlanta and Houston)
- Also worked as a test manager with Wipro taking care of QA deliverables for a huge Insurance company(Argo Insurance).

- Expertise in documenting QA Plan, test strategy, test plan, test cases preparation, reviewing Automation and Performance testing strategy, giving test estimates for mobile apps, web applications, ETL tests, managing testing teams and delivery.
- Experience in handling CMMI level Software Quality certification for the tests I am involved in.
- Expertise in documenting defects with high level of detail, accuracy, and informative recreation steps using Quality Center and JIRA.
- Testing content management systems(AEM 6.5).Expertise in using workflows, templates, Dam Assets, Live Copy.

Web, Mobile and ETL Automation Development Experience:

- Experience in developing web automation framework using Selenium.
- Worked on developing a mobile automation framework using Test complete(Test Complete is a functional automated testing platform developed by Smart Bear Software company) for a real time Android application
- Worked on developing an ETL automation framework using Query Surge tool and integrating with Dev ops using AWS Step functions.
- Proven ability in developing Test Automation using Cucumber for Behavioral Driven Development (BDD) using Gherkin scripts.
- Extensive experience in preparing Test Strategy, Test plan, Test scenarios, Test cases, and Test Scripts based on User requirements and System Requirements Documents for Functional, Security, Performance, Configuration, Regression, Integration and Usability Testing.
- Experience on Data Driven, Page Object Model automation framework development using Selenium WebDriver and TestNG.

Team Management:

- Worked as QA lead/ Senior QA Lead for companies IBM, Automatic Data Processing, Algorithm, Appstek Corp and IMI Mobile in India.
- Worked as Senior QA Lead for companies Cigniti, Infosys, and Cap Gemini in the USA.
- Worked as a test manager for Wipro USA.

EXPERIENCE

US Work Experience:

Client : Verizon

Implementation Partner : Info vision

March 2023 to Present.

Role : QA Portfolio Lead

Responsibilities/Tasks Accomplished:

- Responsible for Verizon's Integration Platform testing ensuring the BAU (Business As Usual) changes to NSA are implemented correctly.
- Verify Add/Upgrade lines for existing and new customers on Indirect and Retail channels for Verizon.
- Verifying the API's enhancements using Postman. Executing the API's automation suite on Edge tool.

- Verifying the Retail, Telesales and Indirect channels for new features and enhancements implemented through user stories.
- Verified new device addition/upgradation /add a line/upgrade a line scenarios to Verizon real time customers.
- Participated in SIT testing for two testing streams.
- Performed and monitored the end to end automation test suite for regression testing of all the APIs in the platform for every Sprint release.
- Development of API automation test suite using Edge tool.
- Demo to Client product owners for the features developed in an Enterprise Release.
- Managing and directing the offshore QA team members from Bangalore and Pune.

Tools :

Postman, Edge tool for API automation.

Client: Pennsylvania Power and Light

Feb 2023 to Dec 2023

Implementation Partner: Cigniti

Designation: Portfolio QA Lead

Responsibilities/Tasks Accomplished:

- Working with test managers (at client side and implementation partner side) to understand the test progress across different projects.
- Working with test leads to comprehensively understand the application systems (EAM, FSM and Financial Operations Applications) , business and system requirements.
- Working with other stakeholder QA teams(from Accenture, Cigniti and Cognizant) to understand the scope of work planned for a Move group(Project) release.
- Participate in daily standups and technical deep dive sessions to understand the scope of QA items.
- Maintaining the test repository on Azure Dev Ops.
- Sending the daily status report on the test case execution (Passed, Failed , Blocked) , defects (Active, Resolved, New, Resolved) to the management.

Tools:

Azure Dev Ops, Oracle ERP tools for finance and inventory modules (EAM , FSM)

Client: Waste Management, Houston

Sept 2022 to Jan 2023

Implementation Partner: Cigniti

Designation: Senior Quality Assurance Team Lead

Responsibilities/Tasks Accomplished:

- Working with test Architects to comprehensively understand the application systems(GANTT real time web view) , business and system requirements.
- Working with other stakeholder QA teams(from Deloitte and TCS) to review the Sprint deliverables, QA Release items for the month.
- Analyzing the user stories, coming up with the test cases and creating the relevant functional and regression test cycles in JIRA(Zephyr squad).
- Executing the test cases once the code is deployed to the QA environment.
- Reporting any bugs observed while testing and reporting them in JIRA.

- Participate in daily standups and technical deep dive sessions to understand the scope of QA items.
- Testing the order creation in the mainframe system.
- Testing GANTT web-view for real time monitoring of driver's tickets status. Was responsible for taking care of 4 releases.
- Testing an Android mobile application(Driver Assist) for drivers onboarded on trucks.
- Worked closely with client QA team, stakeholders QA team from other companies and ensured the release items are tracked and properly deployed to production.
- Testing content Management systems.
- Designing, executing, and maintaining comprehensive test plans to ensure the quality and functionality of AEM platform and its requisite components.

Tools:

JIRA, DA(Driver Assist) Android Mobile Application, MAS(Main Frame application for ticket generation), AWS Dynamo DB,S3 Bucket, Lambda, Rest APIs.

Client: Inspire Brands, Atlanta, GA

Sept 2021 to Sept 2022

Implementation Partner: Capgemini

Designation: Senior Quality Assurance Team Lead

Responsibilities/Tasks Accomplished:

- Worked for Inspire Brands Big data - ETL test as a senior test lead, leading the efforts of the entire testing team , reporting to the client manager on the sprint deliverables.
- Responsible for managing a big data test involving creation and maintenance of customer data management.
- Worked with Azure Storage explorer ,Databricks technologies to connect to source files, create temporary views and validate the target data in CDM data bricks. Then check the data movement from CDM to snowflakes environment.
- Worked on both UDP 1.0 and 2.0 technologies in Databricks and snowflakes.
- Proficient with creating test scripts and sql queries on databricks.
- Proficient with using snowflakes and connecting to different schemas like RDS, IDH, IDS to test the target data on different environments like QA, UAT and production.
- Worked on automation of the test scripts in databricks to automate the entire ETL pipeline.
- Scheduled the test scripts on databricks to run at specific times to test the data movement in an automated way, hence saving cost and effort for the test involved in.
- Designed the test cases, test plan and test execution cycles in JIRA .Managing the test deliverables on JIRA. (Using Xray plugin)
- Discussing with the client QA manager, Development manager and Solution Architects to understand the QA requirements and designing the appropriate QA processes.

Tools:

Azure Storage Explorer, Azure Databricks (building data frames), Snowflake.

Client: Schwab Bank, Texas

Jan 2021 to Sept 2021

Implementation Partner: Infosys

Designation: Quality Assurance Team Lead

Responsibilities/Tasks Accomplished:

- Responsible for managing a banking data test involving creation and maintenance of customer data management.
- Working on Mongo DB, DB2 technologies to analyze customer accounts and validate their transactions.
- Designing the test scripts in JIRA and test code in Postman.
- Managing the test deliverables on JIRA.
- My role as a test lead involves leading the QA team(both onshore and offshore QA team members) for testing of data movement across various Accounts(Current, Savings, Forex-Investment accounts) in the banking applications used by bank representatives.
- I worked as an end to end test lead and ensured all the channel partners testing was completed, when code was moved from QA to UAT.
- I have used postman to validate the web services used in the banking application and test the user account creation, fund transfer and the appropriate validations that need to be done before a transfer happens in real time.
- Querying the data using Mongo DB and DB2, validating the data movement from DB2 to Mongo DB.
- Creating temporary views in Databricks and validating the data movement from source to target.
- Discussing with the client QA manager, Development manager and Solution Architects to understand the QA requirements and designing the appropriate QA processes.

Tools:

DB2, Mongo DB, Postman to test Rest and SOAP web services, Databricks.

Client: Argo Group US, San Antonio, Texas

Jan 2020 to Dec 2020

Designation: Quality Assurance Team Manager

Responsibilities/Tasks Accomplished:

- Responsible for managing a big data test involving creation and maintenance of an Enterprise data warehousing system.
- Designing the automation framework for the test using Ruby-cucumber and query surge ETL frameworks.
- Managing the test deliverables on JIRA.
- My role as a team lead involves leading the QA team for testing of data movement across various Source Systems into Landing Zones, Data Lake, Argo Enterprise Data warehouse and Production Actuaries.
- Discussing with the Program director, Development manager and Solution Architects to understand the QA requirements and designing the appropriate QA processes.
- Interacting with the Scrum Master to understand the various releases and plan the QA items accordingly.
- Directing the functional QA lead towards testing upcoming data sources and designing the testing strategy accordingly.
- Testing the reconciliation of the financial transactions of Argo Insurance before submission to the IRS.
- Tracking the day-to-day status of the testing team, identifying any risks, plan the testing activities in a sprint, workload and resource planning, coordinating with the offshore and on-site team members.
- Planning the automation strategy for ETL test automation.

- Monitoring the results of automation frameworks developed using Ruby, Cucumber and Python. Monitoring the counts, content and financial summaries of various source and target tables.
- Creating Lambda jobs on AWS and monitoring the ETL jobs.
- Using cloud watch for raising any alarms and informing the production teams for any risks observed in data monitoring.
- Sending the monitoring results to Development and production teams on a day-to-day basis and certifying the health of the data warehouses.
- Creating query pairs and test suites using the Query Surge tool.
- Understanding the test road maps and planning the testing activities.
- Sending the Weekly and Monthly test status reports to various stakeholders.
- Attending the offshore and onshore scrum and sprint meetings.
- Using TESTRAIL for test cases and release management.
- Using CI/CD integration tools Jenkins, Bit bucket.

Environment:

- Big Data Integration and data management tools like Attunity, Atacama, Talend.
- DBeaver, snowflake as database management systems.
- Query Surge Tool.
- Ruby Cucumber based ETL automation frameworks.

Client: New York Housing and Preservation Department, NY
Designation: Senior Quality Assurance Consultant

Aug 2019 to Jan 2020

Roles and Responsibilities:

- Designing and managing the automation testing for the RTFF mobile app used by New York inspectors.
- I have developed a mobile automation framework using Test Complete.
- As a part of automation testing created a test repository for the mobile app elements.
- Used the mobile app simulator for Android and created the object repository and the framework design.
- Used Java script to make the necessary changes and developed the various modules for the user interactions.
- The mobile automation framework was used to cover sanity tests, regression tests and monitoring mobile releases by generating automated reports using Test complete (Smart Bear automation tool).
- I was responsible for testing the release items for two major releases of the product in the market.
- Demoed the framework to New York Housing and Preservation Department Directors and Program Managers and it was appreciated by them.
- Responsible for managing the manual and automation testing for a real time mobile application (RTFF) test.
- My day-to-day activities involve automation framework design, test estimation, attending scrum calls and sprint planning meetings, writing test plan & test cases.
- My other tasks include going through the redesign of the mobile app and writing test cases for it.
- Successfully developed a mobile automation framework and demoed the framework to New York QA Director and other stakeholders.

- Was also responsible for Web services testing.
- Managing the test deliverables using JIRA.
- I was responsible for checking the ETL jobs written to copy the data from Oracle to SQL server and vice versa
- (Oracle was used to store the source data and SQL server was used to hold the data written by the app, there were daily jobs written to copy the data from the SQL server to Oracle, and jobs written to transfer the data from Oracle to SQL server for every 15 minutes).
- Responsible for doing API testing for the mobile app.

Environment:

- Test complete and Appium for developing mobile automation framework.
- JIRA for maintaining the test artifacts like user stories, defects and test tracking.

Experience in India:

Client: Appstek Corporation Hyderabad, India
Designation: Senior Consultant

Oct 2018 to Aug 2019

Test Type: Testing of web applications, Mobile testing of applications on Android and IOS.

Responsibilities/Tasks Accomplished:

- Responsible for managing four software tests. My day-to-day activities involve resource planning, test estimation, Sprint planning, and identifying resources for the tests.
- Managing test deliverables for mobile applications, web applications designing the automation frameworks, designing the overall test strategy for functional automation and performance testing teams.
- Reviewing QA plan, test plan, test cases before submitting them to the client.
- Tracking the day-to-day status of the testing team, identifying any risks and mitigating them.
- Managing the testing team for two software tests which deal with providing web and mobile application solutions for Fitness (Ability Fix), Salon and Spa Services (Paradise) for a client in the USA (Nevada). These applications are into production.
- Responsible for writing the Test Plan, Test cases, execution, monitoring and reporting of the test status for the testing team.
- Managing the load and performance test teams and reviewing their reports.
- Designing a mobile automation framework using Appium.
- Lead the testing teams for the two tests GP-MCA and GP-ICM for the client IMI Mobile (major telecom service provider) from its home location.
- Managing the test resources for two of its vendors, planning the testing activities on a day-to-day basis, allocation of work to the resources and tracking the progress on a day-to-day basis.
- Meetings with the client's senior managers and AVP's.
- Identifying any risks encountered while testing and mitigating them.
- Conducted testing of DPDP platform, GP-MCA and GP-ICM tests and reporting the testing status of the testing team.
- Writing test suites for the client, getting them reviewed and approved by the management.
- Used TESTRAIL for test cases and release management.

Client: Algorythma software company, Abu Dhabi
tests: Abjadiyat, SWOO and Teachers Web App

Jan 2017 to Oct 2018

Designation: QA Lead

Test Type: Mobile application testing, network and performance testing of mobile apps, testing of web application, API testing.

Responsibilities/Tasks Accomplished:

- Lead the Mobile application testing teams from onsite in Abu Dhabi.
- Tested two mobile apps by the name SWOO and Abjadiyat, which are live in play store and Appstore, having 5 million (SWOO) and 1 lakh (Abjadiyat) installs respectively.
- Performed API testing of user activation using POSTMAN tool.
- Performed functional testing of these applications after each build to the test and production environments by writing and running automated test scripts using Appium on mobile applications and selenium for web applications.
- I was involved in performance testing of these two apps in comparison with Facebook, Twitter, Instagram (for SWOO) and Zee's alphabet (For Abjadiyat) on different network bandwidths.
- I have tested the performance of the apps by writing and running load and performance test scripts using JMeter.
- Apart from the two mobile apps, I was also involved in testing of a web application: "Teachers Web App".
- I was also involved in accessibility testing of this web application and it's responsive on Android and IOS.
- Involved in developing mobile automation framework for Android and iOS applications using Appium.
- Performed performance and stress testing using Neo Load tool.

Client: European and Scotland based Clydesdale Yorkshire
Bank Calcutta, India

June 2017 to Dec 2017

Test Type: ETL manual and automation testing

Designation: Senior Test Engineer

Responsibilities/Tasks Accomplished:

- I was a senior ETL QA lead responsible for checking whether the data is being transformed correctly in the jobs designed in the Data Stage tool.
- There are various jobs designed for loading customers and organizations banking and credit card details into a master data management tool by performing the required transformations.
- Created, ran and maintained automated test scripts in Query Surge. I was involved in testing these jobs for two code drops to the client.

Environment:

- Data Stage ETL tool was used for creating and maintaining the ETL jobs
- Query Surge was used as an ETL automation test tool.
- HBase was used for maintaining the database.

Client: HMRC legislative body of UK, UK and
Australian Payroll Hyderabad, India

May 2012 to May 2017

Designation: Senior Quality Assurance Engineer

Responsibilities/Tasks Accomplished:

- I worked as a senior member technical in the QA team and primarily took care of Australia and UK Freedom Payroll applications testing and support. I have led the testing team for manual, database and reports streams.
- I was responsible for critical MDM testing for legacy enterprise applications by the name Freedom and iHCM used for Payroll. Experience in testing Views and Stored Procedures for critical Reports.
- Basically, our company used to do Payroll for UK employees using a legacy application, which was migrated to a revolutionary UI Dojo based application. We were responsible for migrating the payroll data of 2,50,000 employees.
- Worked on testing of Siebel CRM tool.
- Worked in testing of database migration and critical data reports and exports. Prepared test plan and test template for reports testing which was used across the test for testing 250 + data reports and exports.
- Contributed to writing Automation scripts and developing an automation framework using QTP.
- Worked in Migration of automation scripts from QTP to Ruby--Cucumber- Selenium based hybrid automation framework.
- I developed a keyword driven framework for a production application using Cucumber.
- Worked with Continuous build and integration and deployment using Git, Maven and Jenkins.
- I have parallel worked on resolving production issues as part of the production support team. I resolved a lot of cases logged on Siebel CRM regarding queries on pay slips of employees, payroll reports and many year-end files sent to HMRC.

Client: Wipro Technologies Hyderabad, India

Dec 2009 to April 2012

Designation: Software Test Engineer

Responsibilities/Tasks Accomplished:

- As a senior software test engineer, I worked on ETL and ELT testing with Informatica tool, testing data extraction from source databases, transformation and loading to the target tables in the data warehouse.
- Once the ETL implementation was done, I was involved in testing critical business intelligence reports.
- Worked on testing of network components for SFR clients.
- Worked on testing Web Services (SOAP and REST) using SoapUI.
- Worked on data migration testing for Glaxo and Smith Kline Health care clients.

Environment:

- Java was used as the development platform.
- Informatica ETL tool was used for developing and maintaining the ETL jobs.
- Oracle DB was used as the database for maintaining the data.
- The CRM tool Right Now was used for maintaining the Customer interactions.
