

SAKCHI SHRESTHA

Full-Stack Software Engineer
Dallas, TX

(214) 945-8674
sakchis660@gmail.com

Professional Summary

- Over 7 years of Professional Experience in Software Engineering using Java (8/11/17), Golang, Python, Angular (10,14,16), Kafka and AWS (SNS, SQS, EC2, ECS, EKS, RDS, CloudWatch).
- Expert in developing core Java concepts: Collections, Multithreading, Serialization, Exception handling and Query writing using SQL, Procedures, Functions, and Packages using PL/SQL
- Experience in working with messaging systems like Kafka, Rabbit MQ and AWS SNS/SQS.
- Proficient in using RDBMS concepts with Oracle, DB2, MySQL, and SQL Server.
- Experience in installing, configuring, and maintaining Application servers like Web Sphere and Web Servers like Web Logic, Apache HTTP, and Tomcat on UNIX and Linux.

Education

University of Texas at Arlington | Bachelor of Science in Computer Science

Skills

Java (8/11/17)	Go	Maven	Cassandra DB
Python	Angular (8/12/14)	MySQL	Splunk
Kafka	AWS	Linux	Pub-Sub model
Spring Boot	Docker	Infrastructure as Code	Elastic Search
Kubernetes	SQL	DynamoDB	SonarQube
REST	Microservices	DependaBot	Design Patterns
Jenkins Script	Terraform	DevOps	Log4j
Code Reviews	Git	Serverless Computing	SNS/SQS
Prometheus	Oracle	Agile Practices	Spring Framework

Employment History

Bank of America | Full-Stack Software Engineer | Charlotte, NC

May 2024 - Present

- Worked in BOA's internal application system building an automated data pipeline using Alteryx, integrating Oracle SQL queries to streamline ETL processes and reduce report generation time by 60%.
- Developed automated transaction validation system using Java, backend services to process large financial datasets and apply predefined validation rules, ensuring accuracy and compliance in real-time.
- Implemented multithreading to optimize performance, handling high transaction volumes efficiently, and integrated the system with internal APIs to update records and generate structured compliance reports.
- Utilized Java 17's sealed classes for stricter class hierarchy control, security and code maintainability.
- Created RESTful APIs using Spring Boot, communicating microservices & Angular 14 front-end.
- Automated cloud infrastructure provisioning with Terraform, for better scaling and consistent deployments using Infrastructure as Code (IaC).
- Developed serverless applications with AWS Lambda, processing tasks in response to events without dedicated servers.
- Monitored system health and performance using Dynatrace, designed database triggers and procedures for all the modules and used API Gateway to manage API lifecycle.
- Configured Kafka producers/consumers, worked on consumer offset and triggered actions.
- Optimized & wrote complex SQL queries and stored procedures in MySQL, improving performance.
- Implemented Spring Security for JWT-based authentication, securing APIs and enforcing RBAC.

First United Bank | AWS Engineer | Durant, OK

Jun 2021 - Apr 2024

- Designed and implemented ATM transaction processing features for First United's ATM application, ensuring secure and efficient transaction handling, and enhancing system reliability.
- Utilized ECS, EKS, and MSK for efficient container orchestration and managed Kafka streaming.
- Used S3 for object storage and Lambda for serverless event-driven functions.
- Developed back-end services with Java 11 (stream API, garbage collection) and Python Flask in a microservice architecture.
- Implemented IAM roles, security groups, and parameter groups for secure AWS RDS instances.
- Used SonarQube for code quality and used Kibana for log monitoring and proactive issue resolution.
- Implemented offset-based reprocessing of failed Kafka messages.
- Integrated Spring Boot & Spring Cloud for services with centralized configuration & service discovery.
- Wrote and optimized complex SQL queries to enhance performance and business reporting.
- Hosted web applications with CloudFormation for infrastructure as code.
- Monitored system health and performance using Dynatrace to ensure high availability.

GEICO | Java Software Developer | Chevy Chase, MD

Jun 2018 - May 2021

- Developed and optimized policy-related features for Geico's policy management system using Java 8, Angular 10 and Kafka, for policy creation, renewal & integration with external data sources.
- Worked with AWS EC2, AMI, EBS, CloudWatch, SQS & S3 for cloud infrastructure management.
- Orchestrated the deployment, scaling, and management of Docker Containers using Kubernetes.
- Worked on Bootstrap, Angular Material, Angular 8 along with using XML to code configuration files.
- Implemented MVC architecture with Spring framework for view customizations and integration with application logic.
- Used Stateless Session Beans to implement Session Facade design pattern for centralized control.
- Developed Java components for handling payment tasks: authorization, capture, refunds & chargebacks.
- Configured AWS security groups, network ACLs, Elastic IPs, and Internet Gateways for Cloud Security.
- Developed Spark code using Scala and Spark-SQL/Streaming for faster testing and processing of data.
- Worked with the Kafka Admin team to set up and manage Kafka clusters in QA and production.

American Airlines | Full Stack Java Developer | Dallas, TX

Mar 2017 - May 2018

- Contributed to modernizing a flight reservation and management system, integrating RESTful APIs for communication between various internal systems and external travel partners.
- Used Java & Spring MVC to handle backend processing of flight bookings, cancellations & modifications.
- Built a custom cross-platform architecture using Java, Spring Core/MVC, and Hibernate.
- Implemented SOAP and REST web services for internal and third-party application using Apache CXF.
- Built and managed S3 buckets for storage and backup solutions using S3 and Glacier on AWS.
- Involved in defining build process with Maven scripts and customizing through CI builds using Jenkins.
- Used Kubernetes to orchestrate the deployment, scaling, and management of Docker Containers.
- Integrated Hibernate ORM with Spring MVC for back-end persistence with Oracle.
- Created Re-useable components, Custom Modules, Custom Directives, Pipes, Services in AngularJS.
- Managed components with Subversion and tracked defects with JIRA.
- Used Maven for build and deployment across UNIX, Linux, and Windows environments with Hudson.
- Mentored junior developers in cloud-native practices while orchestrating cross-functional teams to deliver high-performance distributed systems
- Optimized application performance through caching strategies and database indexing.
