

PROFESSIONAL SUMMARY:

Highly experienced Senior Software Engineer with 7+ years of comprehensive expertise in designing, developing, and implementing robust enterprise applications using J2EE and a wide array of open-source Java frameworks. Possessing a strong background in full lifecycle development, I consistently deliver seamless integration of both front-end and back-end components, including responsive web interfaces ensuring an optimal user experience. Proven ability to collaborate effectively with business analysts and clients to gather requirements, formulate technical specifications, and provide mentorship to junior developers. Adept at leading multiple application releases from initial planning through successful completion, while strictly enforcing code standards and best practices. Proficient in Core Java/J2EE (JSP, Servlets, EJB, JMS), Spring, Hibernate/JPA, SOAP and RESTful web services, XSLT transformations, and modern front-end technologies such as Angular, React, and Vue JS, ensuring high-quality, scalable, and maintainable software solutions.

WORK EXPERIENCE:

Senior Software Engineer @ Comcast — Philadelphia, Pennsylvania

Jul 2023 – Present

- Designed and developed highly scalable Java Spring Boot microservices for critical customer management and comprehensive billing functionalities, aligning with robust application solutions.
- Built and maintained RESTful APIs, ensuring seamless integration with diverse mobile and web applications serving millions of subscribers, enhancing overall system interoperability.
- Implemented real-time event streaming solutions using Apache Kafka for usage and outage detection, contributing to enhanced system monitoring and rapid response capabilities.
- Migrated complex legacy applications into a modern microservices architecture, successfully deploying them on AWS cloud infrastructure for improved performance and scalability.
- Developed and secured authentication workflows utilizing OAuth2 and JWT tokens, ensuring enterprise-grade security and compliance for sensitive customer data.
- Built responsive Angular dashboards for customer support and service tracking, providing an optimal user experience for internal teams and improving operational efficiency.
- Enhanced reporting queries, significantly improving system performance by 35% and optimizing data retrieval for critical business intelligence and analytical insights.
- Automated CI/CD deployments with Jenkins and Docker/Kubernetes, streamlining the release process and enforcing stringent code standards and best practices.
- Implemented effective caching strategies using Redis for high-frequency APIs, drastically reducing latency and boosting system responsiveness under heavy load.
- Actively collaborated with business stakeholders and cross-functional teams for feature enhancements and requirement gathering within an Agile sprint development methodology.

Technologies Used: Java 11, Spring Boot, REST APIs, Angular, Kafka, Oracle, Redis, AWS, Docker, Kubernetes, Jenkins

Software Engineer @ Cerner Corporation — Kansas City, Missouri

Feb 2021 – Aug 2022

- Developed and optimized Java Spring Boot applications for advanced electronic medical record (EMR) systems, ensuring high performance and reliability.
- Built FHIR-compliant APIs, enabling secure and seamless interoperability with various healthcare platforms while adhering to industry standards.
- Integrated HL7 feeds for efficient patient data exchange across diverse clinical systems, improving data consistency and accessibility.
- Implemented robust role-based access control mechanisms with Spring Security, ensuring stringent HIPAA compliance and data privacy.
- Designed and deployed microservices for critical functionalities such as appointment scheduling and claims processing, enhancing modularity and scalability.
- Automated workflows for insurance claims, significantly reducing processing delays by 25% and improving operational efficiency for healthcare providers.
- Developed intuitive React-based dashboards for clinicians and administrators, providing an optimal user experience for managing patient information.
- Built real-time notification services using Kafka for immediate patient updates and alerts, enhancing communication and critical response times.

- Migrated existing Java EE applications into cloud-native Spring Boot microservices, modernizing the infrastructure and improving deployment flexibility.
- Conducted comprehensive performance tuning and optimization, successfully improving system load handling capacity by 30% for critical healthcare operations.

Technologies Used: Java 11, Spring Boot, Hibernate, REST APIs, React, Kafka, Oracle, AWS, Jenkins, Docker

Junior Software Engineer @ Clarivate Analytics — Denver, Colorado

Dec 2019 – Jan 2021

- Developed Java-based modules for efficient research data ingestion and intricate processing, contributing to critical analytics platforms.
- Built robust Spring MVC applications to effectively manage publication and citation data, ensuring data integrity and accessibility.
- Created and maintained REST APIs consumed by internal analytics platforms, facilitating data exchange and seamless system integration.
- Integrated SOAP web services with external research databases, enhancing data breadth and collaborative research capabilities.
- Automated ingestion pipelines for diverse research metrics data, streamlining data flow and reducing manual processing efforts.
- Developed resilient data access layers utilizing Hibernate and PostgreSQL, ensuring efficient and reliable data persistence.
- Built interactive Angular components for comprehensive analytics dashboards, providing an optimal user experience for data visualization.
- Wrote comprehensive unit tests using JUnit and Mockito, ensuring high code quality and stability of backend services.
- Actively participated in Agile sprint planning and daily standups, contributing to a collaborative and efficient development lifecycle.
- Conducted thorough code reviews, ensuring adherence to established code standards and best practices across the development team.

Technologies Used: Java 8, Spring MVC, Hibernate, REST APIs, Angular, PostgreSQL, Azure, JUnit, Maven

TECHNICAL SKILLS:

- **Programming Languages:** Core Java, J2EE, C#, JavaScript, TypeScript, SQL
- **Cloud & Containerization Platforms:** AWS (EC2, S3, RDS, Lambda), Azure (App Services, AKS), Docker, Kubernetes
- **Database Management & ORM:** Oracle, MySQL, PostgreSQL, MongoDB, Cassandra, Entity Framework, Hibernate, JPA
- **Development Frameworks & Tools:** Spring Boot, Spring MVC, Struts, EJB, JMS, MDB, JCA, RESTful Web Services, SOAP Web Services, XSLT Transformations, HTML5, CSS3, Angular, React, Vue JS, Bootstrap, JSP, Servlets, Apache Kafka, RabbitMQ, Redis, Jenkins, Git, GitHub Actions, Maven, Gradle, JUnit, Mockito, Selenium, Postman, Cucumber
- **Architectural & Methodologies:** Microservices Architecture, Design Patterns, Data Structures & Algorithms, OAuth2, JWT, Agile/Scrum, CI/CD, Full Lifecycle Development, Code Standards, Mentoring, Requirement Gathering, Application Design, Quality Assurance

EDUCATION:

Master of Science in Computer Science @ University of Alabama at Birmingham
