SUMMARY

With over 13 years in the industry, I've built a passion for creating various web and mobile applications. I specialize in full-stack development, using **React**, **React Native**, **Next.js**, and **Knockout.js** to build responsive and engaging user interfaces. On the backend, I'm experienced with **Node.js**, **Express.js**, **NestJS**, and **TypeORM**, developing scalable services, workflow automation, and real-time features. I'm proficient in **SQL Server**, **PostgreSQL**, **MySQL**, **MongoDB**, **Redis**, **RabbitMQ**, **BullMQ**, **SignalR**, **WebSockets**, and implementing CI/CD and DevOps pipelines using **GitHub Actions**, **Jenkins**, **TFS**, **Docker**, and **cloud services (AWS ECS, Lambda, S3, CloudFormation, CloudWatch, VPC, ElastiCache, Secrets Manager, KMS, IAM)**. I focus on building secure, maintainable, and high-performance solutions while ensuring seamless user experiences across web and mobile platforms.

EDUCATION

CALIFORNIA STATE UNIVERSITY, FRESNO

Bachelor's Degree in Computer Science

2008-2012

***Relevant Coursework:** Data Structures and Algorithms, Software Engineering, Database Systems and Management, Computer Networks, Web Development

PROFESSIONAL EXPERIENCE

CURRENT

Senior Software Engineer

SEP 2021-Present

Project Overview: Contributed to the development of a cloud-based, project-centric procurement and materials management platform; Current SCM, engineered to serve large-scale engineering, energy, and construction organizations.

Key Achievements:

- Enhanced procurement efficiency by 70% through implementation of intelligent workflow automation modules for requisitions, RFQs, and purchase orders; reducing manual coordination across global project teams.
- Developed a dynamic reporting and analytics dashboard providing real-time visibility into budgets, inventory levels, and vendor performance; empowering stakeholders to make faster, data-driven decisions.
- Optimized database queries and indexing strategies that improved complex report generation speed by 60%, reducing latency for concurrent multi-project users.
- Introduced automated bid evaluation and historical comparison tools to streamline vendor selection, reducing bid analysis time by 50%.

Technical Contributions:

- Backend Development:** Built scalable APIs and services using **Node.js**, **Express.js**, **NestJS**, **TypeScript**, and **Sequelize/TypeORM**, focusing on performance tuning, workflow orchestration, and domain-driven design.
- Frontend Development:** Engineered responsive, high-performance user interfaces in **React 18**, **TypeScript**, **Tailwind CSS**, and **Material-UI**, implementing **Redux Toolkit**, **React Query**, and **Formik** with **Yup** for form validation and state management.
- Workflow Automation:** Implemented complex approval hierarchies, automated procurement triggers, and real-time notifications using **Node.js** event-driven patterns, **BullMQ**, and **RabbitMQ**, enhancing collaboration between distributed teams.
- API & Integration:** Developed **RESTful APIs**, integrating with **Dynamics 365**, **Power Platform**, and third-party financial/ERP systems for synchronized procurement data and invoice workflows.
- Security & Compliance:** Enforced **RBAC**, **JWT**-based authentication, **OAuth 2.0**, and **Okta** for identity and access management, **AES-256** encryption, **TLS 1.3**, and audit logging to meet enterprise-grade security and compliance standards.
- Cloud Infrastructure:** Deployed and monitored microservices via **AWS ECS**, **Lambda**, **S3**, **CloudFormation**, and **CloudWatch**, optimizing resource scaling and cost management.
- Data Management:** Designed normalized relational schemas using **PostgreSQL/MySQL**, optimized queries, and implemented caching with **Redis** for high-frequency data retrieval.

- **CI/CD Automation:** Established **GitHub Actions** and **Jenkins** pipelines for automated testing, container image builds, vulnerability scanning, and deployment to **AWS** environments.

Tech Stack: Node.js, Express.js, NestJS, TypeScript, Sequelize, TypeORM, PostgreSQL, MySQL, Redis, RabbitMQ, BullMQ, React, Redux Toolkit, Material-UI, React Query, Formik, Yup, AWS ECS, Lambda, S3, VPC, ElastiCache, CloudFormation, CloudWatch, Secrets Manager, KMS, IAM, Docker, GitHub Actions, Jenkins, REST API, GraphQL, Dynamics 365, Power Platform, OAuth 2.0, JWT, Okta, RBAC, AES-256, TLS 1.3

SCIENCESOFT Software Engineer

MAY 2018 - AUG 2021

Project Overview: Contributed to the development of a GAMP4-compliant, full-cycle pharmaceutical manufacturing automation system for a multinational drug manufacturer operating in 100+ countries.

Key Achievements:

- Delivered a centralized, scalable manufacturing and order management platform, integrating separate pharmacy and TPN modules into a unified solution; reducing manual data entry and system maintenance costs by over 60%.
- Automated validation and verification workflows for drug recipes, batch preparation, and compounding stages; ensuring 100% compliance with GAMP4 and ISO-9001 standards.
- Developed a real-time stock and inventory tracking system, improving component availability forecasting and reducing production downtime by 45%.

Technical Contributions:

- **Backend Development:** Built modular server-side components using **Node.js**, **Express.js**, and **TypeScript**, implementing domain logic for manufacturing workflows, stock control, and billing. Designed distributed backend services leveraging **Cloudflare Durable Objects** for stateful, globally consistent session and messaging management.
- **Frontend Development:** Developed responsive web interfaces with **React 16**, **JavaScript (ES6)**, **HTML5**, **CSS3**, and **Material-UI**, supporting multi-user operations for pharmacists, technicians, and supervisors.
- **Database Management:** Designed normalized schemas for patient data, orders, batches, and compounding logs using **PostgreSQL** and **MongoDB**, with stored procedures, triggers, and indexing to enforce referential integrity and optimize query performance.
- **Reporting & Analytics:** Created KPI dashboards and custom analytics using **Node.js** backend services, **Chart.js**, and **D3.js** for operational and financial visibility.

Tech Stack: Node.js, Express.js, TypeScript, React 16, JavaScript (ES6), HTML5, CSS3, Material-UI, PostgreSQL, MongoDB, Chart.js, D3.js, AJAX, JSON, XML, Git, REST API, CI/CD, Cloudflare Durable Objects, Distributed Infrastructure, AI-powered Messaging Systems

PELOTON INTERACTIVE Full Stack Engineer

SEP 2015 – APR 2018

Project Overview: Contributed to the development and optimization of Peloton's next-generation connected fitness platform - a real-time, data-driven ecosystem that powers live and on-demand workouts across millions of global users.

Key Achievements:

- Architected and developed scalable microservices supporting over 6 million concurrent fitness sessions, optimizing API latency by 45% through asynchronous processing and Redis caching.
- Led modernization of the instructor dashboard, integrating real-time performance metrics and ride analytics via WebSockets, improving responsiveness and user engagement by 60%.
- Collaborated cross-functionally with product, design, and hardware engineering teams to unify workout scheduling, subscription management, and leaderboard systems under a shared service framework.

Technical Contributions:

- **Backend Development:** Developed services using **Node.js**, **Express.js**, and **JavaScript (ES6)**; implemented **Sequelize/TypeORM** for data access and optimized **PostgreSQL/MySQL** queries for large telemetry datasets.
- **Frontend Development:** Built responsive interfaces with **jQuery**, **Knockout.js**, **HTML5**, **CSS3**, and **Bootstrap**, ensuring consistent experience across desktop and tablet devices.
- **Data Management:** Designed relational schemas in **PostgreSQL/MySQL**, implemented triggers and caching with **Redis** for high-frequency telemetry and leaderboard updates.
- **API & Integration:** Created **RESTful APIs** for mobile and device applications; implemented **JSON serialization** and server-side validation.

- **Real-Time Updates:** Integrated **Socket.io** for live updates to class metrics, leaderboards, and social interactions.
- **Testing & QA:** Used **Mocha**, **Chai**, and **Sinon** for automated unit and integration testing; leveraged **Selenium WebDriver** for end-to-end browser testing.
- **DevOps:** Configured **TFS/Git** for version control, CI builds, and automated deployments to staging and production environments.
- **Security & Compliance:** Implemented authentication and authorization with **Passport.js**, enforced secure communication via HTTPS, and role-based access for administrative modules.

Tech Stack: Node.js, Express.js, JavaScript (ES6), Sequelize, TypeORM, PostgreSQL, MySQL, Redis, Socket.io, jQuery, Knockout.js, HTML5, CSS3, Bootstrap, Mocha, Chai, Sinon, Selenium WebDriver, Git/TFS, JSON, Passport.js, HTTPS

VERIZON

Jr Software Engineer

MAY 2012 – AUG 2015

Project Overview: Contributed to the development of Verizon Connect Reveal, an advanced GPS fleet management platform designed to enhance operational efficiency, reduce costs, and improve safety for businesses managing mobile fleets.

Technical Contributions:

- **Backend Development:** Designed and implemented scalable backend services using **Node.js** and **Express.js**, reducing code complexity and accelerating feature development by 30%.
- **Real-Time Features:** Developed real-time vehicle tracking features using **Socket.io**, enabling instant location updates and alerts for fleet managers.
- **API & Integration:** Built modular, maintainable **RESTful APIs** for telemetry ingestion, reporting, and integration with GPS hardware.
- **Data Management:** Optimized **PostgreSQL/MySQL** queries and indexing strategies, improving system responsiveness for large datasets of vehicle telemetry by 40%.
- **Frontend Development:** Enhanced web dashboards using **jQuery 1.7**, **HTML5**, and **CSS3**, ensuring cross-browser compatibility and responsive design for desktop and tablet users.

Tech Stack: Node.js, Express.js, Socket.io, REST API, PostgreSQL, MySQL, jQuery 1.7, HTML5, CSS3, AJAX, Mocha, Chai, Selenium WebDriver, Git/TFS, Web Deploy
