PROFESSIONAL SUMMARY:

- Software Engineer with **4+ years of experience** in designing, developing, and deploying frontend-heavy full-stack applications using **modern Java and JavaScript frameworks**.
 - Proficient in **React.js, TypeScript, Redux, Material-UI, Tailwind CSS**, and backend development using **Spring Boot, Node.js, and RESTful APIs**.
 - Skilled in building **high-performance, scalable, and responsive web applications** with clean, reusable, and testable code following Agile methodologies.
 - Strong expertise in **Java/J2EE technologies** including **JSP, Servlets, Spring (MVC, Boot, AOP, Security, ORM), Hibernate, EJB**, and web services (**REST, SOAP, JMS**).
 - Experienced in containerization and orchestration using **Docker** and **Kubernetes**, and in deploying distributed systems on **AWS (EC2, S3, DynamoDB, CloudFront)**.
 - Adept at developing rich and interactive UI components using **HTML5, CSS3, JavaScript, jQuery, Angular (2+), and React.js**.
 - Implemented and followed **software design patterns** such as **Singleton, Factory, DAO, and MVC** for maintainable and modular architecture.
 - Hands-on experience in **database design and programming** with **Oracle, SQL Server, and MongoDB**, including writing complex queries, stored procedures, and PL/SQL packages.
 - Strong understanding of **Object-Oriented Design (OOD), Software Development Life Cycle (SDLC), and Test-Driven Development (TDD)** practices.
- Proven track record in **performance tuning, debugging, and optimizing enterprise-grade applications**, with excellent analytical, problem-solving, and collaboration skills.

TECHNICAL SKILLS:

- **Languages:** TypeScript, JavaScript (ES6+), HTML5/CSS3, Java, Python, SQL (PostgreSQL, MySQL), NoSQL (MongoDB, DynamoDB), Bash
 - **Frontend Technologies:** React.js, Redux Toolkit, Material-UI, Tailwind CSS, Next.js, Webpack, Babel, Angular
 - **Backend Technologies:** Node.js, Express.js, Spring Boot (lightweight services), REST APIs, GraphQL, JWT
 - **Developer Tools:** Git, Docker, Kubernetes, Jenkins, Terraform, Ansible, GCP, AWS (EC2, S3, RDS, Lambda, IAM), Azure, VS Code, IntelliJ
 - **Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis
 - **Monitoring & Logging:** Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Fluentd
 - **Testing & QA:** Cypress, Jest, Mocha, Chai, React Testing Library, Selenium, JUnit, Mockito
 - **Security & Identity Management:** OAuth2, OpenID Connect, Keycloak
 - **Version Control & Collaboration:** Git, GitHub, Bitbucket, GitLab
 - **Scripting & Automation:** Python, Bash, Shell Scripting, Terraform
-

PROFESSIONAL EXPERIENCE:

Walmart Inc., Reston, VA
Software Engineer

June 2024 – Present

- Spearheaded frontend architecture redesign using React.js, Redux, and TypeScript, improving UI performance and component reusability by 70%.

- Optimized backend microservices using Spring Boot and Hibernate, implementing efficient caching strategies with Redis, reducing API response times by 40%.
- Developed and maintained scalable, responsive UI components adhering to Material-UI and WCAG accessibility guidelines.
- Integrated real-time frontend monitoring using Prometheus and Grafana for enhanced performance insights and faster issue resolution.
- Optimized React Router logic to implement dynamic, lazy-loaded modules, reducing page load times by 30%.
- Automated frontend regression testing suites using Jest, Cypress, and React Testing Library, improving test reliability and reducing manual QA cycles.
- Designed RESTful API integrations with Spring Boot microservices, optimizing API calls and reducing latency by 35%.
- Collaborated with backend engineers to enhance API efficiency, enabling smoother data flow and faster client responses.
- Containerized microservices using Docker and orchestrated deployments using Kubernetes and Jenkins for seamless CI/CD pipelines.
- Implemented OAuth2.0 and JWT-based authentication mechanisms to ensure secure user access across frontend and backend layers.
- Created GraphQL clients for optimized data fetching, reducing network calls and improving frontend data handling efficiency.
- Participated in Agile ceremonies, sprint planning, and code reviews, ensuring high code quality and timely feature delivery in cross-functional teams.

Prudential Financial, Newark, NJ

Aug 2022 – June 2024

Java Full Stack Developer

- Built interactive React-based dashboards with GraphQL integration and Kafka event streams, enabling real-time updates and improving data rendering speed by 40%.
- Developed highly modular, reusable, and responsive UI components using React.js, Angular 12, Material-UI, and Tailwind CSS, improving front-end development speed by 50%.
- Implemented microservice-based architecture using Spring Boot, Node.js, and Express, integrating RESTful and Kafka-based messaging services for seamless backend communication.
- Deployed and orchestrated containerized applications on AWS using Docker, Kubernetes, and Jenkins CI/CD pipelines to automate build, test, and deployment workflows.
- Implemented authentication and security mechanisms using Spring Security, OAuth 2.0, and JWT for secure SSO and user access management across multiple applications.
- Developed and optimized data pipelines using Apache Camel and Spring Kafka to convert legacy data into Avro format and publish to Kafka topics.
- Created automated test suites using Jest, React Testing Library, JUnit, and Mocha, achieving 85%+ test coverage and ensuring high-quality code through TDD practices.
- Configured AWS components such as EC2, S3, and Lambda for hosting microservices, ensuring scalability and high availability across environments.
- Integrated CI/CD pipelines with Jenkins, Git, and Bitbucket, leveraging plugins to streamline continuous integration, code quality checks, and deployments.
- Worked with Oracle, MongoDB, and Hadoop for data management, query optimization, and distributed system performance tuning in production-grade applications.

Goldman Sachs, New York, NY

Jan 2021 – July 2022

Java Developer

- Developed and optimized React.js-based single-page applications using Redux, React Router, and Webpack, improving UI performance and reducing load times by 35%.
- Migrated monolithic UI codebase to a modular, component-driven architecture, enhancing scalability, maintainability, and developer productivity.
- Implemented OAuth2 and JWT-based authentication flows for secure user access and session management across

React and Spring Boot applications.

- Worked closely with backend teams to design and integrate RESTful APIs using Spring Boot and Node.js, ensuring efficient data exchange and smooth user experience.
- Containerized and deployed microservices using Docker and Kubernetes on AWS EC2, with CI/CD automation via Jenkins pipelines for seamless builds and deployments.
- Developed and maintained reusable UI components using React.js, Bootstrap, and Material-UI, ensuring responsive design and consistent user experience across devices.
- Integrated Redux and Redux-Saga for robust state management and efficient handling of asynchronous API calls in large-scale applications.
- Performed Integration and Regression testing using Selenium and Mockito, achieving high reliability and ensuring stability across multiple release cycles.
- Monitored and optimized AWS infrastructure using Amazon CloudWatch and automated build and deployment processes using Maven and Jenkins.
- Worked in Agile/Scrum environments collaborating with product owners and QA teams, delivering high-quality, production-ready applications in iterative sprints.

EDUCATION:

University of Central Missouri

Master of Science in Computer Science
