LinkedIn: [linkedin.com/in/nallagatla-sowjanya-8194a5263](https://www.linkedin.com/in/nallagatla-sowjanya-8194a5263)

As a Salesforce Certified Professional with around **10+ years** of IT experience, I have **8 years** of expertise in Salesforce.com and Force.com. During this time, I have focused on configuration, customization, integration, communities, and lightning migration from classic to lightning. I also have extensive experience in developing Aura, lightning components using the lightning design system. In addition to my Salesforce experience, I also have **2+ years** of experience in JAVA/J2EE.

PROFESSIONAL SUMMARY:

- My expertise includes working with Salesforce.com CRM and Force.com platform, where I served as both a developer and administrator for 7 years. Additionally, I have 2 years of experience in Java/J2EE technologies.
- Developed custom Lightning Web Components (LWC) to enhance Salesforce UI, creating dynamic and responsive user experiences. Integrated LWC with Apex controllers to streamline data interactions and backend operations. Leveraged LWC's versatility to optimize user engagement, satisfaction, and overall Salesforce functionality.
- Proficient in designing and maintaining Apex triggers to automate business processes and enforce data integrity in Salesforce. Experienced in handling large data volumes and optimizing trigger performance through bulkification techniques. Skilled in writing unit tests to ensure code coverage and prevent regression issues.
- Extensive experience in building Aura components to customize and extend Salesforce functionality. Proficient in developing interactive and visually appealing user interfaces using Aura framework. Skilled in implementing event-driven architecture and communication between Aura components for seamless user interactions.
- Successfully set up Salesforce Community Cloud and customized community templates to meet specific business requirements. Created branded community pages and implemented features such as discussion boards and Chatter groups to promote community engagement. Experienced in configuring security settings and managing user access within Community Cloud.
- Proficient in configuring and working with CPQ tools such as Apttus CPQ and Steel Brick CPQ. Experienced in utilizing CPQ objects to create quotes, bundles, and manage products for sales and pricing processes. Skilled in implementing pricing rules, discount structures, and product configurations to optimize quoting and sales processes.
- Integrated automated testing frameworks and quality assurance tools with Copado to validate Salesforce customizations and code changes prior to deployment, minimizing the risk of defects and regressions.
- Utilized Salesforce Health Cloud to improve patient care and outcomes by leveraging its patient management and care coordination capabilities. Implemented predictive analytics to identify at-risk patients and intervene proactively to prevent health events. Experienced in customizing Health Cloud to meet healthcare industry requirements and compliance standards.
- Proficient in source control management using Git and GitHub to ensure code integrity and facilitate collaboration in Salesforce development projects. Experienced in version control, branching, and merging strategies to effectively manage code changes and releases. Skilled in resolving merge conflicts and performing code reviews in Git/GitHub workflows.
- Developed flows in Sales Cloud to automate complex business processes and guide users through predefined tasks and actions. Utilized flows to streamline lead routing, opportunity updates, and contract renewals, improving sales productivity and accuracy. Integrated flows with Salesforce data and external systems to facilitate seamless data exchange and process automation.
- Proficient in Salesforce Marketing Cloud, specializing in creating and managing marketing campaigns, automations, and journeys. Skilled in utilizing Email Studio, Journey Builder, Automation Studio, and other Marketing Cloud tools to execute targeted and personalized marketing strategies.
- Experienced in using Jenkins to automate the build, test, and deployment process for Salesforce applications. Configured Jenkins pipelines to orchestrate continuous integration and delivery (CI/CD) workflows for Salesforce development projects. Skilled in configuring job triggers, scheduling builds, and monitoring pipeline executions in Jenkins.
- Gained experience using agile methodologies such as Scrum and Kanban to manage Salesforce development projects effectively. Participated in sprint planning, daily stand-ups, and sprint reviews to prioritize tasks and track project progress. Skilled in adapting to changing requirements and delivering high-quality solutions iteratively in agile environments.
- Configured Service Cloud to deliver exceptional customer service experiences, including case management, knowledge base, and omni-channel support. Implemented workflows and validation rules to automate case routing, escalations, and resolutions, ensuring timely and efficient customer support.

- Configured object relationships in Sales Cloud using lookup and master-detail relationships to establish connections between related records. Utilized lookup relationships for flexible data associations and master-detail relationships for data aggregation and parent-child relationships.
- Experienced in using Salesforce Data Loader to import, export, and delete data in Salesforce Marketing Cloud. Utilized Data Loader to perform bulk data operations, including data imports for subscriber lists, segmentation, and campaign management in Marketing Cloud.

CERTIFICATIONS:

- Certified by Salesforce Administrator
- Certified by Salesforce Platform Developer-1
- Certified by Salesforce Service AI Specialist
- Certified by Salesforce Sales AI Associate

TECHNICAL SKILLS:

Salesforce Technologies	Configuration, Apex Language, Apex Trigger, Apex Scheduler, Batch Apex, Apex Class, Visualforce (Page, Component & Controllers), Data Loaders, Workflows, Validation rules, Flows, Process Builders, Reports and Dashboards.
Languages	APEX, SOSL, SOQL, JavaScript, C/C++, Java, J2EE, HTML, XML, CSS, JSON.
CI CD Tools	Changesets, AutoRabit, GIT, SVN, Copado, Jenkins, JIRA.
Web	HTML, XML, CSS, JSP, JavaScript, WSDL, SOAP.
Managed Packages	CPQ, FSL, S- DOCS, Youreka, DocuSign, Conga Composer, Digital Engagements, Omni Studio.
Clouds	Health cloud, Sales cloud, Service cloud, Community cloud(Experience cloud), Marketing cloud, Financial cloud.

PROFESSIONAL EXPERIENCE:

Client: Southern Company, Atlanta, GA

Mar 2023 – Till now

Role: Salesforce Lightning Developer

Responsibilities:

- Developed and customized Salesforce Sales and Service Cloud solutions to enhance customer engagement and streamline internal sales processes using Apex, LWC, and Flow Builder.
- Developed custom Lightning Web Components (LWC) to optimize the user experience and interface within the Salesforce Sales Cloud. These components improved the responsiveness and performance of user interactions, enhancing overall system usability.
- Created and customized Apex classes and triggers to improve backend processes within the Salesforce Sales and Service Clouds. The automation of key business processes reduced manual effort and improved data consistency.
- Designed and implemented custom objects and fields within Salesforce to meet specific business requirements, ensuring a seamless and scalable data model. These customizations allowed for more efficient tracking and reporting on key business metrics.
- Integrated third-party systems with Salesforce using REST and SOAP APIs, ensuring seamless and reliable data flow between the platform and external systems. This integration streamlined business operations and increased data accessibility.
- Utilized SOQL queries to retrieve data efficiently, optimizing data access and improving overall performance in Salesforce. The queries were designed to handle large datasets, ensuring minimal impact on system speed.
- Implemented complex business logic through Apex triggers to automate workflows and improve operational efficiency. These triggers were tailored to handle specific requirements and trigger actions based on real-time data changes.
- Customized Visualforce pages to meet specific business needs within Salesforce Service Cloud. These pages provided enhanced user interfaces for support agents, improving case management and customer service processes.
- Created custom reports and dashboards to provide actionable insights into business performance, leveraging Salesforce's reporting tools to help leadership make data-driven decisions. These reports were tailored to meet the needs of various departments for optimal visibility.
- Used Salesforce Data Loader to perform bulk data imports and exports, ensuring consistent and accurate data migration across systems. This tool was essential for handling large volumes of data during system upgrades and integrations.
- Designed and deployed Salesforce Lightning components that improved the user interface in Sales Cloud. The components provided a modern, responsive design that enhanced user engagement and streamlined daily tasks.
- Configured and customized Lightning App Pages to create a streamlined user experience for Salesforce users. These pages were tailored to individual user needs, increasing productivity and reducing time spent navigating the platform.

- Integrated and managed data between Salesforce and external systems using custom APIs and integration patterns. These integrations were critical for syncing data in real-time, improving accuracy and reducing data silos across departments.
- Developed and maintained custom Aura components to extend Salesforce functionality and improve user interaction. The components allowed for a more flexible and interactive experience, meeting specific business requirements.
- Conducted unit testing and debugging of Apex classes and triggers to ensure high-quality, error-free code within the Salesforce platform. This helped minimize issues during deployment and ensured the reliability of automated processes.
- Utilized Copado for version control, continuous integration, and automated deployment processes, ensuring smooth and efficient release management across Salesforce environments. This streamlined the development workflow and improved deployment accuracy.
- Leveraged Git for version control and collaborated with the development team to track changes in the Salesforce codebase. Integrated Jira for issue tracking and agile project management, ensuring that all tasks were efficiently managed throughout the development cycle.
- Utilized Workbench to troubleshoot, validate, and deploy changes across Salesforce environments, ensuring data integrity and system functionality. Configured validation rules to enforce data consistency and ensure the accuracy of user input across all records.
- Designed and implemented automation solutions using Flow and Process Builder to improve operational efficiency across Salesforce clouds. These tools automated routine tasks, freeing up valuable resources for more strategic initiatives.
- Collaborated with cross-functional teams to ensure the successful deployment and optimization of Salesforce instances across multiple clouds. The teamwork ensured that all solutions were tailored to meet business goals and user requirements.

Environment: Apex classes, LWC, Flows, SOQL, Triggers, REST & SOAP API's, Data Loaders, Copado, Git, Agile methodologies, Jira, Workbench, Aura, Reports & Dashboards, Custom objects, Report Types, Test classes, Workflows.

Client: Macys, NY

Apr 2021 – Feb 2023

Role: Senior Salesforce Developer

Responsibilities:

- Developed and customized Salesforce Sales and Service Cloud solutions to enhance customer engagement and streamline internal sales processes using Apex, LWC, and Flow Builder.
- Implemented Lightning Web Components (LWC) and Aura Components to create dynamic, responsive, and reusable UI components for an improved user experience.
- Designed and optimized Apex triggers, classes, and batch processes to automate business logic, ensuring data accuracy and seamless integrations with external systems.
- Integrated Salesforce with third-party applications such as payment gateways and inventory systems using REST and SOAP APIs to provide a unified commerce experience.
- Created and managed Experience Cloud (Community) portals for Macy's customers and partners, enabling self-service functionalities and reducing support dependency.
- Developed robust automation using Flows, Process Builder, and Approval Processes to streamline order management, returns, and customer support workflows.
- Designed and implemented scalable data models and security controls including Sharing Rules, Profiles, and Permission Sets to ensure compliance with Macy's data policies.
- Enhanced Salesforce CRM performance by optimizing SOQL queries and implementing asynchronous processing techniques such as Future Methods and Queueable Apex.
- Configured and customized Salesforce CPQ (Configure, Price, Quote) to support Macy's sales operations by automating pricing rules, discounting strategies, and quote approvals.
- Developed and managed Copado deployment pipelines for version control and release management, ensuring smooth CI/CD processes across multiple Salesforce environments.
- Worked closely with Marketing Cloud teams to set up Journey Builder and Email Studio integrations with Sales Cloud, enabling personalized customer engagement campaigns.
- Led end-to-end implementation of Salesforce Order Management System (OMS) to optimize order processing, fulfillment, and tracking for Macy's e-commerce platform.
- Conducted data migration and cleansing activities using Data Loader and ETL tools to ensure accurate customer, product, and transaction data within Salesforce.
- Collaborated with business stakeholders and cross-functional teams to gather requirements, design scalable solutions, and provide Salesforce best practices.
- Provided ongoing production support and troubleshooting for Salesforce applications, identifying and resolving issues related to performance, integration, and user access.
- Implemented Copado deployment pipelines to automate Salesforce release management processes, enabling streamlined deployment of changes across development, testing, and production environments.
- Configured Copado user stories and deployment templates to standardize deployment practices and promote consistency in Salesforce release management.

- Collaborated with cross-functional teams to define integration requirements and deployment strategies, ensuring alignment with business objectives and project timelines.

Environment: Apex Triggers, Classes, LWC Components, lightning AURA Components, Visualforce, MuleSoft Integration, Copado, Approval Process, Reports, Workbench, data loader, Community cloud, Lightning Record Pages, Custom Actions, Platform Event Flows.

Client: Blue Cross Blue Shield of Michigan

Feb 2019 – Mar 2021

Role: Salesforce Admin/Developer

Responsibilities:

- Created Custom Objects and fields for transactional and contractual information and experience with custom application development in Force.com, utilizing Visualforce and Lightning Components/Framework.
- Leveraged Health Cloud's advanced features, particularly the Care Plan functionality, to design and implement personalized care plans. These plans are customized to meet individual patient needs, promoting better adherence to treatment regimens, and ultimately improving patient outcomes. The platform's flexibility allows for dynamic adjustments to care plans based on real-time health data.
- Migrating existing Aura Components and Visual force page to lightning web components (LWC) to improve application performance by following web standards, shadow DOM, custom elements, templates, ECMAScript, events.
- Developed and customized Salesforce applications, including Apex classes, triggers, Visualforce pages, Lightning components, and Flows, to meet specific business requirements.
- Utilized Health Cloud to enhance patient engagement through communication tools and portals. Implemented features that allow patients to actively participate in their healthcare journey, fostering communication with healthcare providers, scheduling appointments, and accessing educational resources.
- Implemented Salesforce solutions to automate and streamline health insurance claims processing, reducing manual efforts and enhancing accuracy.
- Implemented CI/CD pipelines within Copado to automate the build, test, and deployment processes for Salesforce applications and configurations, enabling faster delivery of high-quality releases.
- Community Cloud supports the creation of partner and customer portals, facilitating collaboration, communication, and self-service capabilities tailored to the specific needs of each audience.
- Implement predictive analytics models using tools like CRMA Analytics, Einstein Analytics, or third-party solutions to forecast sales, customer behaviour, and other key performance indicators.
- Developed custom data mappings, transformations, and validation rules using MuleSoft's Data Weave language to ensure data consistency and integrity across integrated systems.
- Created a unified customer view by integrating data from various Salesforce clouds (Sales Cloud, Service Cloud, Marketing Cloud, etc.) within Omni Studio.
- Integrated Salesforce CRM with enterprise resource planning (ERP) systems, customer service platforms, marketing automation tools, and other business applications using MuleSoft's.
- Developed and maintained ETL processes to extract, transform, and load healthcare data into PostgreSQL databases from various sources such as electronic health records (EHRs), medical devices, and external systems.
- Developed in configure price quote (CPQ) app such as Apttus. Experience in configuring price quote (CPQ) with Apttus and Designed, developed, and implemented solutions for the Salesforce/Apttus CPQ/CLM system deployed on the Salesforce platform. Experience with APPTUS CPQ for subscription, billing, invoicing and can take control of sales process from Quote to Cash.
- Used Salesforce Health Cloud tool to improve patient care and outcomes also used predictive analytics capabilities to identify at-risk patients and intervene before they experience a health event.
- Experienced in configuring and customizing Conga solutions for our business. Created and modified Conga Composer templates, automated document generation, and personalized output documents.
- Implemented DocuSign Connect to enable real-time updates and notifications on document status within Salesforce. Experienced in working on integration of projects using Salesforce Omni Studio.

Environment: Salesforce.com Platform, Apex Language, Visualforce (Pages, Components and Controllers), Workflow & Approvals, Reports, CRMA, Data Loader, Data Migration, Pardot, Rest API, SOAP API, site track, Visual flows, Custom Objects, Community cloud, Custom Tabs, Email Services, Java Script, Web Services.

Client: Zoho Corporation, Chennai, India

Sep 2015 – Nov 2017

Role: Salesforce Administrator

Responsibilities:

- Implemented validation rules to validate banking transactions based on predefined criteria, such as transaction amounts, currency types, and transaction types, ensuring accuracy and compliance with regulatory guidelines.
- Executed data loader tools to verify and manage banking product/pricing data within Salesforce CRM, maintaining data accuracy and consistency.
- Designed approval processes for banking transactions, such as wire transfers and credit limit increases, incorporating multi-step approval chains and escalation rules to ensure timely decision-making and compliance with internal policies and regulatory requirements.
- Collaborated with cross-functional teams to customize Salesforce Sales Cloud and Service Cloud for specific banking needs, including customer portal and marketing cloud integration.
- Developed and optimized PostgreSQL database schemas to accommodate banking data requirements within Salesforce CRM, ensuring performance and scalability.
- Configured Service Cloud features for efficient case management and customer support. Integrated Salesforce with communication channels, streamlining customer interactions and improving service delivery.
- Implemented workflow actions, including field updates, email alerts, and task assignments, to streamline communication and task management within banking teams, enhancing collaboration and productivity.
- Responsible for all the activities related to Data Management like updating using Data Loader, Data Import Wizard and uploading data in CSV files into Salesforce and for checking the correctness of the data.
- Managed data import and export processes using Data Loader to streamline data migration and integration between banking systems and Salesforce CRM, ensuring seamless data synchronization and accuracy.
- Created various Summary Reports, Matrix Reports, Pie Charts, Dashboards, and setup Report Folders to authenticate users based on their profiles with permissions and Configured Salesforce.
- Engineered Apex Triggers within Salesforce CRM to automate complex banking processes, such as transaction monitoring, fraud detection, and account management, ensuring regulatory compliance and operational efficiency for Wells Fargo client.
- Utilized triggers to execute custom business logic for dynamic calculation of interest rates, fees, and commissions based on banking product configurations and customer attributes, improving accuracy in financial transactions.
- Developed data loader scripts and templates to automate repetitive data loading tasks, such as bulk account creation, transaction uploads, and customer data updates, improving efficiency and reducing manual effort.
- Implemented workflow actions, including field updates, email alerts, and task assignments, to streamline communication and task management within banking teams, enhancing collaboration and productivity.
- Integrated external banking data sources into Salesforce CRM using Extract, Transform, and Load (ETL) processes, enabling accurate and up-to-date analytics for informed decision-making.
- Implemented Lightning Connect to access external banking data sources directly from Salesforce, enhancing the visibility and usability of critical information.

Environment: Service & Sales Cloud, Lightning Design System (LDS), Visualforce Pages, Apex Triggers, Batch Apex, Schedule Apex, REST, Lightning Web Components (LWC), GitLab CI/CD, Jenkins, Jitterbit, DocuSign, Vlocity, JIRA, Git, GitHub, Agile.

Client: Experion Technologies, Bengaluru, India

July 2013 – Aug 2015

Role: Java Developer

Responsibilities:

- Designed and developed application in n-tier fashion as per struts based MVC architecture using Servlets.
- Scripting of Test cases based on the Specifications received for the request.
- Responsible for Coding using JSP, Java Servlets, Spring MVC and XML.
- Assisted in developing and maintaining Java applications, contributing to code reviews, and debugging efforts.
- Collaborated with team members to design and implement new features, ensuring adherence to coding standards and best practices.
- Participated in daily stand-up meetings, providing updates on progress, and discussing potential solutions to technical challenges.
- Worked closely with the QA team to identify and resolve software defects, ensuring a smooth user experience.
- Supported version control and code repository management, using tools like Git for code versioning and collaboration.
- Requirements gathering- Proto-typing, Walk-through to business groups and gap analysis.
- Understand the business aspect of the application and convert it into requirements documents.
- Create POC for first time patterns and vendor integrations.
- Worked on Eclipse as the development environment using CVS version controller.
- Called Stored procedures in Oracle using callable statements in JDBC.
- Used ANT tool to build and deploy application on Tomcat Server.

Environment: SQL, PL/SQL, DB2, Apache Tomcat, XML, CSS, Windows XP, Linux, Struts, EJB, Java/J2EE coding, J2EE patterns, Angular JS, JDBC, Spring, Tomcat.
