

Sowjanya Vasa

sowjivasa@gmail.com | +1 (757) 861-4927 | [Sowjanya Vasa - LinkedIn](#)

SYNOPSIS: Experienced professional with 6+ years of proven expertise in Application Development, Testing, Deployment, and Maintenance across diverse domains, including Financial and Insurance

EXPERIENCE SUMMARY

- Proficient in utilizing Java, Spring Boot, RESTful APIs, Angular, AWS, and Docker to deliver robust and scalable solutions.
- Full exposure to complete Software Development Life Cycle (SDLC) like Requirement gathering, Analysis, Design, Development, Documentation, Testing and Deployment.
- Experienced in developing web applications using Spring MVC and Spring Boot frameworks, proficient in designing and implementing RESTful APIs for client-server communication.
- Experienced in developing web applications using Java EE technologies such as Servlets, JSP (Java Server Pages), Struts, JDBC, RESTful Web Services (JAX-RS), SOAP(JAX-WS).
- Experienced in designing responsive web applications using HTML5, CSS3, JavaScript, jQuery, and Bootstrap. Proficient in developing interactive user-friendly interfaces with Angular and React.
- Experienced in working with various databases, including MySQL, Oracle, and MongoDB, with expertise in schema design, optimization, and managing schema migrations.
- Experienced in utilizing JDBC, JPA (Java Persistence API), ORM and hibernate for seamless communication with databases.
- Strong working knowledge of Database Programming using SQL, PL/SQL. Experienced in implementing Triggers and Stored Procedures for efficient data management.
- Experience in implementing Test-Driven Development (TDD) practices and utilizing JUnit and SonarQube for comprehensive unit testing, ensuring high-quality and resilient software solutions.
- Experienced in utilizing AWS services like EC2 and S3 for scalable computing and storage solutions.
- Experienced in deploying Enterprise Java Beans and J2EE applications (WAR, JAR) on Apache JBoss and Tomcat application servers.
- Proficient in containerization using Docker for efficient deployment and management. Experienced in implementing CI/CD pipelines with Jenkins to automate build, test, and deployment processes.
- Experienced in implementing Log4j for centralized logging in java applications, enable effective monitoring and debugging of application logs in IAT, UAT and Production environments.
- Proficient in Agile-based development methodologies and actively engaging in Scrum sessions.
- Proficient in utilizing Git for version control and GitHub as a code repository, enabling streamlined collaboration and code management within development teams.
- Proficient in utilizing Maven for project management and dependency management, Jira for issue tracking, and Confluence for collaboration in Agile development environments.
- Expertise in using Development Tools like IntelliJ IDEA, Eclipse, and Visual Studio Code.

QUALIFICATION

Degree	Institute	Year
Master of Computer Science	Illinois institute of Technology	2024
Electronics & Communication Engineering	R.V.R. & J.C. College of Engineering	2017

CERTIFICATION

Certification	Institute	Year
DevOps Engineer	edureka	2020

Data Visualization Virtual Internship	Illinois institute of Technology	2023
---------------------------------------	----------------------------------	------

Professional Experience:

Holiday Channel, US
Senior Software Engineer (Internship)
February 2025 – Present

Project Name: MVP Digital Magazine

Project Description: The MVP Digital Magazine project involves publishing 91 articles, with 56 successfully released, and plans for Google Ad promotions to enhance reach.

Environment: Angular, Java 8, Spring Boot, REST API, MongoDB, AWS S3, IntelliJ, Git, Docker, Clickup

Responsibilities:

- Developed and integrated RESTful APIs for backend services based on article requirements.
- Designed and implemented a user-friendly UI using Angular to enhance the front-end experience.
- Designed and optimized MongoDB collections and schemas to efficiently handle unstructured JSON data, improving query performance and reducing data retrieval time.
- Built a Java utility to upload images, documents, audio, and video files to AWS S3 for secure storage.
- Led weekly status meetings, assigned tasks, and mentored team members to ensure project progress and collaboration.

IBM, Bangalore, India
Application Developer
September 2021 – July 2023

Project Name: LMS (IBM Learning Management Application)

Project Description: An internal enterprise LMS, integrating with IBM Blue Pages to mandate and track employee training with SCORM-compliant eLearning modules.

Environment: React, SCORM, LMS, Java 8, Spring Boot, REST API, JSON, Kafka, MongoDB, IntelliJ, Git, Jenkins, Docker, Kubernetes, ServiceNow, Confluence, Agile Scrum

Responsibilities:

- Collaborated in Agile development, providing task estimates and regular progress updates to clients through daily and weekly reports, ensuring alignment and timely delivery on project objectives.
- Designed and developed responsive user interfaces using React, focusing on creating intuitive and engaging user experiences for clients.
- Configured SCORM compliant Java-based APIs for communication between e-learning content and the LMS backend, ensuring accurate tracking of progress and completion data.
- Developed efficient and scalable RESTful APIs using Java 8, applying streams and functional programming for clean and maintainable code.
- Designed and configured backend systems using Spring Boot to manage course uploads, metadata extraction, and learner tracking.
- Implemented Kafka registry and Kafka config for the modern application development.
- Implemented data persistence using MongoDB to store and manage large-scale JSON documents, ensuring high availability and scalability of the database.
- Worked with cross-functional teams to whitelist the role-based access & secure API communication.

sowjivasa@gmail.com | +1 (757) 861-4927 | [Sowjanya Vasa - LinkedIn](#)

- Orchestrated containerized microservices using Amazon EKS (Elastic Kubernetes Service), ensuring efficient container orchestration, scalability, and resource management.
- Documented code, scripts, APIs, and development processes to facilitate knowledge sharing.
- Used Confluence for collaboration and issue tracking to support an organized development process.

Tata Consultancy Services, Chennai, India

Java Developer

August 2017 – September 2021

Client 1: HDFC Life Partner

Project Name: PCSPS & Corporate Portal

Project Description: A one stop application for all customer and sales data which include Protection, Pension, Savings & Investments, Health, etc.

Environment: Java8, Spring MVC, Spring Boot 2.1, React, RESTFUL API's, JPA, JSON, XML, SOAP, Oracle 11g, MongoDB, Eclipse, Maven, Git, Jenkins, AWS, JIRA, Agile, Scrum, Log4J, JUnit, Postman, JBoss, JAX-RS.

Responsibilities:

- Implemented Agile Scrum methodology to organize and manage development tasks efficiently, ensuring transparency, collaboration, and adaptability throughout the project lifecycle.
- Developed a custom user login module for the HDFC Life Insurance partner web app, using HTML, CSS, JavaScript, Oracle, and CI/CD tools, supporting login access for 18 unique employer roles.
- Configured Single Sign-On (SSO) for secure and simplified user authentication and Implemented Spring OAuth 2.0 for secure and standardized authentication across microservices.
- Developed backend services with Spring Boot and React for the frontend for a customer service portal, implementing modules for policy creation, updates, and customer reports (monthly, quarterly, semi-annual, and annual).
- Designed and implemented RESTful APIs and business logic using Spring MVC to facilitate communication between the frontend and backend components of the system.
- Developed microservices for a React application, integrating RESTful APIs with external systems (SMTP, NSDL, OCR) to improve user interactions.
- Designed and developed the user interface using Angular, focusing on creating an intuitive and user-friendly experience for inventory managers and administrators.
- Integrated Spring Data JPA to enable interaction between the application and the Oracle database.
- Designed and optimized MongoDB collections and schemas to efficiently handle unstructured JSON data, improving query performance and reducing data retrieval time.
- Conducted unit testing, integration testing, and end-to-end testing to validate the functionality and performance of the application.
- Utilized Maven as a build tool to ensure dependency management and build automation.
- Leveraged Git and GitHub as the code repository and version control system, facilitating collaborative development, code review, and version tracking within the project.
- Managed Jenkins pipelines to trigger builds upon code commits, execute tests, and deploy artifacts to AWS environment.

Client 2: CERSAI (Central Registry of Securitisation Asset Reconstruction and Security Interest)

Project Name: Central Known Your Customer (CKYC).

Project Description: An application to act as single point of registry for multiple financial institutions to store their customers details without any duplicates

Environment: Struts 2, Java, HTML5, CSS3, jQuery, JavaScript, Hibernate 4, MySQL, Oracle, Junit, MVC, Maven, Spring Batch, WSDL, AJAX, SOAP, Web services, AWS, TortoiseSVN, Bitbucket, Bash, Apache Tomcat, JBoss7, EC2, Log4J, Waterfall

Responsibilities:

- Gathered requirements through interaction with all the relevant teams and prepared high-level design and detailed design documents.
- Developed a monolithic web application with UI screens using JSP, HTML5, CSS3, and JavaScript.
- Utilized JSP, Servlets, and Struts to resolve production support issues in CKYC web application.
- Created Action Forms, Action Servlets, and Validation Forms within the Struts framework, implementing Struts Dispatch Action and form bean classes.
- Managed client-server validations using the Struts Validator Framework's validate plugin.
- Migrated Java application into a standalone Spring Batch application, achieving significant performance improvements.
- Implemented multithreading to handle concurrent requests and improve application performance.
- Developed and maintained SQL Stored Procedures, Packages, and Functions, building complex queries for data analysis and extraction.
- Developed a business continuity plan for the MYSQL server databases using JDBC drivers.
- Developed RESTFUL web services for data exchange between applications.
- Developed a Spring Batch application to migrate files from ISILON to AWS EC2 (Dell EMC ECS).
- Configured Hibernate mappings and entities to establish relationships between Java objects and MySQL database tables.
- Created tables, views, and indexes in Oracle 11g to support data migration from MySQL databases.
- Resolved session leakage issues by upgrading Hibernate from 3 to 4.
- Resolved memory and CPU utilization problems of Java Standalone utilities.
- Deployed applications on client Linux servers, ensuring reliable and efficient performance.
- Wrote scripts to archive and purge the metadata and outdated logs files of application.
- Created reusable components to enhance development efficiency and consistency across projects.
- Used TortoiseSVN for version control to manage code effectively and support team collaboration.
- Leveraged ANT build tool to compile code and generate JAR & WAR files for application deployment
- Configured and deployed applications on servers such as Apache Tomcat and JBoss.
