

Sasidhar Reddy Kunduru

Sr .Net Full Stack Developer

Email: sasireddy1616@gmail.com

Mobile: +1(616-3007-171)

Professional Summary:

- Over 10+ years of IT experience specializing in Dot Net technologies, including .NET CORE, C# 10.0 features, Multithreading, Collections, ASP.NET CORE, ADO.NET, MVC, AJAX, VB.NET, JavaScript, Web services, Web API, HTML, CSS, WCF, WPF, XML, Angular, LINQ, SSIS, SSRS, SQL Server, Entity Framework, and PostgreSQL/NoSQL.
- Proven track record of successfully applying Agile Scrum methodologies to software development projects.
- Developed applications following architectures such as Onion architecture, MVC architecture, N Tier architecture, and Microservices, with a focus on Asp.Net Core Web App, Asp.Net Core Web API and Asp.Net MVC.
- Skilled in designing and deploying various .NET applications, including Web API, Win Forms, WCF, and Web Services.
- Expertise in designing and implementing RESTful APIs and services in .NET Core, utilizing cutting-edge technology trends to build scalable, efficient, and interoperable web solutions.
- Hands-on experience with Object-Relational Mapping (ORM) tools like ADO.NET, Entity Framework, and LINQ, coupled with strong database development skills in SQL Server and Oracle.
- Expertise in implementing and managing API Gateways on Azure Cloud, ensuring secure, scalable, and efficient communication between microservices and external clients.
- Proficient in implementing and integrating Web Services like RESTful, SOAP, utilizing OAuth2, SSL, and JWT for enhanced security.
- Proficient in creating ASP.NET-based Graphical User Interfaces with CSS, HTML, Bootstrap, JavaScript, TypeScript, Angular JS, React JS, and PowerShell scripting.
- Experienced in developing robust and efficient applications using Java widely used object-oriented programming language.
- Hands-on experience with databases including SQL Server, PostgreSQL, Star Dog, and MongoDB for both SQL and NoSQL solutions.
- Expertise in creating and optimizing PL/SQL stored procedures, functions, triggers, and complex queries for effective database management.
- Implemented messaging queues like MSMQ, RabbitMQ, and others for efficient communication between components.
- Experienced in using testing tools such as Postman, SOAP UI, and Swagger UI for comprehensive API testing and documentation.
- Proficient in utilizing advanced testing methodologies, including XUnit, NUnit, and Moq, to ensure software reliability, performance, and functionality, effectively identifying and mitigating potential issues.
- Expertise in Azure DevOps CI/CD from a developer standpoint, ensuring seamless integration and continuous deployment.
- Proficient in working with cloud technologies like AWS, Azure, and others, leveraging their services and infrastructure for scalable and resilient applications.
- Expertise in performing Functional Testing, Integration Testing, Backend Testing, Regression testing and API Testing using Selenium/Web driver, Java and JUnit/TestNG, Unit Testing.
- Experience working on MS SQL Server Databases including Database Design, Query Tuning, and Writing Complex stored procedures while working with the large databases.
- Experience in working with Crystal Reports, SQL Server Reporting Services (SSRS) and SQL Server Integration Services (SSIS) using Visual Studio
- Skilled in version control tools including Git, SVN, TFS, and others, ensuring collaborative and organized code management.
- Proficient in build tools such as Visual Studio, Visual Studio Code, and SQL Server Management Studio, ensuring efficient project development and maintenance.
- Good understanding of various workflow models such as Agile, DevOps and Waterfall.

Technical Skills:

Microsoft Technologies	.NET Framework 3/3.5/4/4.5/5/6/7, ASP.NET, ADO.NET, ASP, ADO, WCF, LINQ.
Programming Languages	C, C++, C#, .net, VB.Net, Knowledge in Python, COBOL, JCL, Razor
Web Scripting Languages	JavaScript, JSON, jQuery, CSS, HTML, DHTML
Web Technologies	ASP.NET, HTML5, CSS3, Java Script, JQUERY, Angular 13, Angular 12, Angular 9, Angular 8, XML, JSON, XAML, XSL, XSLT, Kendo UI, Azure, Knockout JS, Angular JS, Marionette.js, Require JS, Ajax, Web Services, Boot Strap.
Database Technologies	SQL Server (Stored Procedure, Triggers, User Defined Functions, Views), MS Access, T-SQL, PL/SQL, ODBC, MySQL, SQL Server client management studio, MongoDB, Oracle 10g/9i/8i.
XML Technologies	XML, XHTML, DHTML, SOAP, WSDL, Web Services
Operating Systems	Windows 2007, Windows 10, and Windows server 2012/ 2016/2019
Software/Tools	Jenkins, Docker, Kubernetes
Modelling Tools	UML, Rational Rose, Design Patterns, MVC
Cloud	Azure. AWS
Application Servers	IIS

Testing Tools	MS-Test, N unit, Mocking, Visual Studio Unit Test, J unit, Jasmine.
Version Control Tools	Visual Source Safe (VSS), Team Foundation Server (TFS), VSTS, GIT
Tools	SQL Server Reporting Services, Redis, PostgreSQL, OData, RDF Crystal Reports (2010/9/8.5/8), SQL Server Integration Services, UML, MS Visio, SharePoint, Visual SourceSafe, Subversion, Team Foundation Server, Delphi, Xpedite, Adobe Experience Manager.

Professional Experience:

Client: CapitalOne
Location: Mclean,VA
Role: Full stack .Net Developer

Oct'2022 – present

Roles and Responsibilities:

- Involved in the complete Software Development Life Cycle including Analysis, Design, Implementation, Testing and Maintenance using Agile methodology.
- Utilized Microservices architecture, developing and deploying RESTful APIs using .NET Framework and ASP.NET Core Web API.
- Effectively Implemented the power of .NET Framework and ASP.NET Core Web API to design, develop, and deploy RESTful APIs.
- Developed business logic using C#.NET through abstract classes, interfaces, and classes.
- Utilized Angular components and services to create dynamic and responsive user interfaces for seamless data retrieval and real-time updates within the Member Portal.
- Utilized Entity Framework for Object-Relational Mapping (ORM) to interact with the database.
- Implemented data exchange using JSON format.
- Implemented OAuth2 for secure authentication and authorization mechanisms.
- Utilized Angular, HTML, CSS, JavaScript, Bootstrap, and TypeScript to create dynamic and responsive user interfaces, ensuring an engaging and user-friendly experience.
- Leveraged Mean Stack (Node, Express, and Angular JS) to build applications, taking advantage of a comprehensive technology stack.
- Utilized SQL Server to store and manage catalog data, ensuring efficient event sourcing and data processing within the application.
- Utilized VB.NET alongside C# to ensure seamless integration and compatibility between different parts of the application.
- Utilized RabbitMQ to enable asynchronous communication between various modules, improving system responsiveness.
- Utilized Apache Kafka as the message queue for efficient communication and data processing between different services and components within the application.
- Developed Azure Cloud API Gateway to orchestrate and manage the RESTful APIs, ensuring seamless communication between different services and modules within the application.
- Utilized Azure cloud services and resources for developing, deploying, and managing the application.
- Utilized Xunit and Component testing for end-to-end testing, ensuring code stability and overall software quality.
- Proficient in Karma and Jasmine for Angular testing, ensuring robust code quality and seamless user experiences.
- Utilized Postman, SOAP UI, Swagger UI, etc., for testing API endpoints and ensuring their functionality and reliability.
- Employed Azure DevOps for project management, version control, continuous integration, and deployment, streamlining the development workflow.
- Utilized Docker for containerization and Kubernetes for orchestration, streamlining application deployment and scaling processes.
- Led the implementation of robust CI/CD pipelines using tools like Jenkins, GitLab CI, or GitHub Actions, integrated with Terraform for infrastructure provisioning.
- Customized Sitecore pipelines to incorporate custom business logic and workflows, facilitating integration with external systems and third-party applications.
- Utilized SonarQube for code quality analysis, ensuring adherence to coding standards and best practices.
- Collaboratively managed and tracked changes in the project's source code using Git version control system.
- Utilized Visual Studio as the primary build tool for the project.
- Proficient in Team Foundation Server (TFS) for collaborative version control and efficient project management.

Environment: .NET 5, ASP.NET 4.5,.Net Core 3.0, MVC 5, .Net Framework, Angular JS 11/13, Windows 10, CID, PWA, DEV Apps, JIRA, Jenkins, Azure, Visual Studio 2019, GITLAB, TFS, ER/Studio, Data Modeling, ODP.NET, VB6, SharePoint 2013, VB.Net, Web Forms, JSON, Web API, AJAX, Bootstrap, SQL, MS SQL 2016 R2 enterprise server, swagger, XML, Active Directory, C#, SOA, IIS8.0, JQUERY and CSS, HTML5, SOAP, LINQ, JavaScript.

Client: State of Michigan
Location: Lansing, MI
Role: Sr. Net Developer

June'2019- Oct'2022

Roles and Responsibilities:

- Developed and supported applications following Agile software development methodologies.
- Implemented Onion Architecture principles to enhance application modularity, separation of concerns, and maintainability, ensuring a robust and scalable software design.
- Developed Web API controllers in ASP.NET Core to build and maintain Restful APIs, both serving as an API provider and consuming APIs from Azure cloud services.
- Developed and implemented RESTful APIs in .NET Core to gradually replace PHP endpoints, allowing for a phased transition while minimizing disruption to users.
- Utilized Entity Framework Core for object-relational mapping in .NET applications.
- Implemented JSON data format for communication between various components of the application.
- Integrated applications with Azure cloud services, including API Gateway, for seamless communication and data exchange.
- Implemented OAuth2 for secure authentication and authorization in the application.
- Utilized Angular, HTML, CSS, JavaScript, and Bootstrap for building responsive and interactive user interfaces.
- Experience with JavaScript frameworks such as AngularJS and Knockout JS, React JS.
- Collaborated effectively with designers and backend developers to implement CoreUI components and features that align with project requirements.
- Utilized Azure App Service to host Win forms developed with WPF and XAML, benefiting from its scalability and reliability.
- Implemented Azure DevOps to achieve continuous integration (CI) and continuous deployment (CD), using Jenkins pipelines to deploy microservices to Azure Kubernetes Service (AKS).
- Designed, data test from the external team and internal team on Cosmos DB and PostgreSQL access Azure API Management portal use updated Azure APP Service and test azure Active Directory groups security.
- Seamlessly integrated Azure-specific third-party controls and libraries, making use of the Azure Marketplace for smooth integration.
- Ensured version control and collaborative development among team members through Azure Repos.
- Designed and developed dynamic Model-Driven and Canvas applications, providing seamless user experiences and enhanced business functionality.
- Implemented advanced workflows and automation using Power Automate, optimizing business processes and increasing operational efficiency.
- Developed interactive and visually appealing reports using SSRS, providing insightful business intelligence to stakeholders.
- Utilized SSIS for data migration, synchronization, and automating repetitive tasks, improving overall data management processes.
- Implemented NoSQL databases, specifically MongoDB, for efficient handling of unstructured data, showcasing expertise in designing flexible and scalable data storage solutions.
- Customized Adobe Experience Manager (AEM) for efficient content management and delivery across multiple channels.
- Created user-friendly WPF based UI using Silverlight.
- Implemented RabbitMQ as a message queue for asynchronous communication between application components.
- Implemented unit tests using XUnit to ensure the functionality and reliability of .NET components.
- Used Karma and Jasmine for testing Angular components, ensuring a robust user interface.
- Utilized Postman for API testing and Swagger UI for API documentation and testing.
- Implemented CI/CD pipelines in Azure DevOps for continuous integration and deployment, ensuring efficient delivery of software updates.
- Analyzed and resolved security hotspots and vulnerabilities flagged by SonarQube, enhancing application security.
- Utilized Git for version control, ensuring collaboration and coordination among team members.
- Utilized Visual Studio and Visual Studio Code for code development and management.
- Proficient in working with third-party controls, like Telerik Rad controls, to enhance application functionality and user experience.

Environment: Visual Studio 2015, Visual Studio Code, .NET Version 4.5, Entity Framework, ASP.NET Web API, C#, CSS3, Azure App Service, Azure Functions, Azure API Management, HTML5, Twitter Bootstrap, JavaScript, jQuery, Angular JS, Angular 8, AJAX, SQL Server 2012, T-SQL, Gulp, NUnit, SSRS, SSIS, SSMS, JWT, IIS, VSTS.

Client : Fannie Mae
Location: Washington, DC
Role: .Net Developer

April'2017 – June'2019

Roles and Responsibilities:

- Involved in analysis, design, and development of the application.

- Managed the extraction of data from XML files into databases.
- Demonstrated expertise in handling Datasets and data tables.
- Utilized Data Grid to review and modify manipulated data efficiently.
- Proficiently employed ADO.NET objects, including Data Reader, Dataset, Data Adapter, and Data View for consistent SQL Server data access.
- Created web pages using C#, ASP.NET, and Visual Studio .NET 2010.
- Constructed dynamic web pages with ASP.NET Web Server Controls, user controls, and integrated Flash content.
- Designed and developed User Interfaces with ASP.NET, JavaScript, ADO.NET, SQL, HTML, CSS, and AJAX Web services.
- Developed the application using ASP.NET C/Vb.Net SQL Server and SDLC on the visual studio IDE.
- Designed and implemented the User Interface Layer with ASP.NET web forms.
- Utilized Entity Framework for object-relational mapping and CLR data types to SQL server data types.
- Conducted software and system testing, release testing, beta support, and bug verification.
- Managed programming activities and product design across multiple modules and subsystems.
- Created Custom User Controls to enhance User Interface coding and aesthetics.
- Enhanced functionality in the business and data access layers.
- Proficient in importing and exporting data between XML files and datasets.
- Utilized ADO.NET for Data Access management with SQL Server.
- Designed and developed complex stored procedures in SQL Server 2008.
- Developed C# components to implement business logic, facilitating database transactions in the middle tier via ADO.NET.
- Generated reports using Data Grid.
- Developed screens using ASP.NET AJAX, C#, and ADO.NET for data display.
- Participated in the development and testing of web services as a middle-tier application on IIS.
- Employed Tortoise SVN for version control.
- Implemented business logic in C# and managed database transactions using ADO.NET objects, including Datasets, Data Adapters, and Data Readers.
- Proficient in preparing, reading, writing, and understanding program specifications.

Environment: ASP.NET 4.0, C# 4.0, MVC 3.0, Html, JavaScript, jQuery, XML, XSLT, Ajax, TFS, VS.NET 2008, SQL Server 2008 and SSRS

Client: BSNL

March 2014 – Jan 2017

Location: Hyderabad, India

Role: .Net Developer

Roles and Responsibilities:

- Followed Agile SDLC using SCRUM methodologies, which involved iterative development and regular sprint planning meetings to ensure continuous improvement and adaptability to changing requirements.
- Implemented the MVC (Model-View-Controller) architecture in the Asp.Net MVC framework to maintain a clear separation of concerns, making the codebase modular and easily maintainable.
- Utilized Asp.Net MVC to develop the web application's backend, allowing for structured development and easy integration with front-end technologies.
- Created RESTful web services to facilitate data exchange between the frontend and backend components, enabling efficient communication and data retrieval for the payment processing system.
- Utilized ADO.NET as a versatile Object-Relational Mapping (ORM) framework, seamlessly integrating the application with databases, ensuring efficient data operations, and enhancing the overall robustness of the payment processing system.
- Successfully migrated and integrated legacy systems built in VB.NET with modern ASP.NET Core components, ensuring seamless project management and enhanced client satisfaction.
- Developed interactive and responsive web pages using Asp.Net MVC for the user interface.
- Utilized TypeScript to enhance the front-end development, providing strong typing and improved code maintainability, especially when working with Angular 2 for building interactive and responsive web pages.
- Utilized these technologies like HTML, CSS, JavaScript, Bootstrap and Ajax to design and enhance the web user interface, ensuring a visually appealing and user-friendly experience.
- Demonstrated ability to customize CoreUI components and styles to create visually appealing and intuitive user interfaces.
- Developed visually appealing and interactive reports using SSRS, translating complex data into easy-to-understand visualizations for effective decision-making.
- Designed and developed ETL (Extract, Transform, Load) packages using SSIS to efficiently transfer and transform data between various databases and data sources.
- Managed data storage and retrieval using SQL Server, ensuring data integrity and reliability for payment processing.
- Employed MongoDB for specific data storage needs, taking advantage of its flexibility and scalability.
- Used React JS in development of the web application to bind the data/model that is being retrieved from a database through services provided in a controller to the view using scope.

- Developed React JS pages, Web services calls, and AJAX calls for the application.
- Designed and developed custom Power Apps solutions, streamlining workflow processes and enhancing user interactions for efficient banking operations.
- Successfully collaborated with cross-functional teams to design, implement, and deploy Power Platform solutions that align with business objectives and user requirements.
- Developed interactive dashboards and reports using Power BI, providing actionable insights into financial data and trends for informed decision-making.
- Utilized AWS cloud services to host and manage various components to web applications, APIs, and other services on AWS infrastructure, ensuring scalability and reliability.
- Used AWS API Gateway to create, publish, and manage RESTful APIs, which would facilitate the seamless communication between different services and modules within my application.
- Implemented XUnit as the testing framework for unit testing and quality assurance, ensuring the reliability and correctness of the developed software components.
- Developed Team Foundation Server (TFS) for version control, allowing for collaborative development, code versioning, and tracking of changes made by team members.
- Utilized Visual Studio for code development, Visual Studio Code for specific tasks, and SQL Server Management Studio for database-related tasks, streamlining the development and deployment process.

Environment: Visual Studio 2012, SOAP, .NET Version 4.5, Entity Framework, ASP.NET Web API, C#, CSS3, HTML5, Twitter Bootstrap, Power Platform, JavaScript, jQuery, Angular JS, Angular, AWS, AJAX, SQL Server 2012, T-SQL, Gulp.
