SUMMARY

- Experienced dynamic **Sr. Full Stack Developer** with **9+ Years** of experience with a demonstrated history of working in IT, specializing in Finance, Health Care, Insurance, and Retirement.
- Extensive experience in designing and developing software applications with Java, J2EE, JavaScript, Hibernate, Spring, Struts MVC, AJAX, JMS, ORM, JNDI, Web services, JDBC, JAXP, RMI, XML.
- Proficient in the implementation of spring frameworks like Spring MVC, Spring IOC, Spring REST, Spring AOP, Spring transaction management, Spring Data, Spring DAO, Spring Batch, Spring Security, and Spring Boot.
- Hands-on experience with design patterns like MVC, business object, value object, singleton, factory pattern, business delegate, session facade, service locator, front controller, and DAO pattern
- Extensive knowledge in developing applications using various scripting frameworks like Angular13, HTML5, CSS3, XHTML, Bootstrap, JavaScript, JSON, ReactJS, Typescript, jQuery, AJAX, XML and JSON.
- Expert in creating web services components of RESTful Web services to interact with UI Interfaces using REST API with NodeJS, ExpressJS, and installing client-side dependencies.
- Hands-on experience in AWS infrastructure on various resources IAM, EBS, Security Group, and Auto Scaling in Cloud Formation JSON templates and some internet technologies, including TCP/IP and HTTP.
- Hands-on experience in consuming RESTful services using AJAX (Angular, http resource and jQuery) to exchange (request/responses) information with SQL/NoSQL databases.
- Proficient in SQL, PL/SQL developed Stored Procedures, Triggers, Functions, and Packages besides writing DDL, DML, and Transaction queries with development tools like TOAD and Rapid SQL.
- Hands on experience working with databases like Oracle 12c/11g, SQL Server, DB2, Mongo DB, MySQL, PostgreSQL.
- Experience in performing CRUD operations and Data Migrations in NoSQL databases and have strong experience designing and working with DynamoDB and MongoDB.
- Experienced with MQ Series Clustering, MQ Client / Server setup, MQ Series System Administration.
- Expertise knowledge in building reports using Jasper Reports through Excel, HTML, PDF, and XML to create dynamic report designs.
- Experienced with writing unit tests using Selenium, JUnit, Mockito, Power Mockito, Jasmine, Karma, Chai, Mocha and Log4j.
- Experience in developing applications using Eclipse IDE, IntelliJ, STS, Visual Studio Code, and JBoss.
- A self-motivated professional and natural communicator possessing sound technical, initiating, leadership, and problem-solving skills and has proven to be a good team player.

SKILLS

C, C++, Java, JavaScript, TypeScript, HTML, Angular, jQuery, Bootstrap, CSS, Node, Express, Spring, Hibernate, Maven, Gradle, XML, AJAX, XSL, JSON, JMS, Apache, JBoss, ANT, APIGEE, WebLogic, Servlets, Struts2, Swing, JPA, Database expert, SQL, NoSQL, Oracle, DB2, Kafka, Argo CD, Cassandra, MongoDB, Elastic Search, PL/SQL, JDBC, Cloud computing expert, AWS (EC2, ECS, RDS, Lambda, DynamoDB), Jenkins, Docker, Azur Cloud, PHP, Testing proficiency, Junit, Jasmine, Chai, Karma, Mocha, Kubernetes, Mockito, Version Controlling, GIT, JIRA, Bitbucket, SVN, Concept development, Project management, Technical Analysis, Tools Proficiency, IntelliJ, STS, Postman, SOAPUI, VSC, Studio3T, PostgreSQL, IBM WebSphere MQ, Eclipse, SQL developer.

WORK EXPERIENCE

Role: Sr. Java Full Stack Developer

Client: Bluestem Brands, PA

Mar 2023 – Current

- Developed UI components using Angular13, JavaScript, TypeScript, HTML5, CSS3, AJAX, Bootstrap, and jQuery.
- Responsible for designing the User Interface by coding in HTML5, CSS3, JavaScript, and Bootstrap to build the Single Page Application.
- Worked on Angular directives, Controllers, Filters, Services, Forms, Templates, Events, and Injectors also created the angular custom directives, Filters, and Services.
- Worked in using ReactJS components, Forms, Events, Keys, Router, Animations and Flux concept.
- Developed business components using Spring Boot, IOC, AOP, Spring annotations and created user detail service for authentication and access control using Spring LDAP and Spring Security.
- Implemented micro services using Spring Boot and Spring Cloud and used Spring MVC framework for building the application based on MVC design paradigm.
- Created Spring batch microservice to sync the data from PostgreSQL to MongoDB.
- Involved in core and advanced data structures Java coding by using Java APIs such as Collections, Multithreading, Exception Handling, Generics, Enumeration, and Java I/O to fulfill the implementation of business logic.
- Used MyBatis framework (ORM) to connect the application with the Database and for Entity Relational Mapping.
- Used Spring framework with EJB to create these services which can handle transactions in millions.
- Design and Implemented RESTFUL Web Services using various data format (JSON, XML) to provide the interfaces.
- Developed and performed test cases using Jasmine and Karma in the unit test and used the protractor and Http-Server for the end-to-end testing.
- Worked on AWS for continuous integration of files to the UI and worked for the backend development using Spring.
- Worked on Maven, Gradle scripts for Jenkins Continuous Integration and Continuous Deployment (CI/CD).
- Monitoring Resources and Applications using AWS Cloud Watch, including creating alarms to monitor metrics such as EBS, EC2, ELB, RDS, and S3, and configuring notifications for the alarms generated based on events defined.
- Involved in writing Java API for Amazon Lambda to manage the schedulers for triggering sync process.
- Perform root-cause analysis of any issues that arise post-implementation and work on solutions related to fixing the problems.
- Understand the business requirements detailed out by the business stakeholders/product owners, design a technical solution, and document the technical solution in the form of design diagrams for communication with the application architecture team.
- Participating in the Agile release planning, sprint planning sessions, and backlog grooming sessions as per client agile guidelines. Involving in complete 'Agile Development Methodology/SCRUM,' adhere to all the stages.

Environment: Java1.8, Angular13, ReactJS, Spring, Hibernate, Oracle, RESTful, SOAP, HTML5, CSS3, JavaScript, TypeScript, jQuery, AJAX, Bootstrap, JSON, XML, AWS, ECS, EC2, S3, RDS, JSON, XML, log4j, IBM Web Sphere, Postman, STS, IntelliJ, MyBatis, Jasmin, Karma, Chai, Maven, Gradle, DynamoDB, MongoDB, PostgreSQL, Jenkins, TDD, JIRA, GIT, Junit and Agile

Role: Java Full Stack Developer

Client: BCBSA, Chicago

June 2021 – Dec 2022

- Extensively involved in coding with Angular9, jQuery UI, and jQuery Mobile to add functionalities and effects like Accordion, Infinite Scroll bar, Slider bar, Draggable/Droppable, Resizable, Progress bar.
- Developed user components Angular 9, HTML, TypeScript, JavaScript, CSS, jQuery, NodeJS.
- Implemented load-balancing with NGINX to allow dozens of NodeJS instances to handle thousands of concurrent users.
- Developed and performed unit testing scripts with Junit API and Power Mock API in TDD environments.
- Implemented the services using Spring Boot and Spring Cloud and used Spring MVC framework for building the application based on MVC design paradigm.
- Optimized Microservices using NodeJS and ES6 as interfaces to Cassandra NoSQL database.

- Designed and implemented container-based polyglot microservice architecture using Docker and ActiveMQ for new application infrastructure.
- Implemented unit test cases, test suites using Junit Framework and provided technical direction with JavaScript, jQuery, and Ajax.
- Used Bootstrap and AngularJS, ReactJS and NodeJS in effective web design.
- Enabled different security authentication mechanisms across mongo instances.
- Redesigned and re-implemented services using NodeJS, Express JS, Mongo DB, and MySQL.
- Designed the Backend-API using mongoose with express framework. Connected to the Mongo database using Mongoose.

Environment: Java, JavaScript, HTML, CSS, JSON, XML, Spring, Angular9, Hibernate, NodeJS, Ajax, jQuery, RESTful, Junit, NGINX, MongoDB, MySQL, JIRA, GITLAB, Agile.

Role: Java Backend Developer

Client: Freddie Mac, VA

Sep 2020 – May 2021

- Provided technical guidance to business analysts, gathered the requirements, and converted them into technical specifications/artifacts.
- Developed all the tiers of the J2EE application, implemented business logic using spring in the middle tier, developed Beans and helper classes to communicate with the presentation tier which consists of JSPs and Servlet.
- Design and development of SOA service using Spring, Java, JPA, Hibernate, DB2 and WebLogic for secondary mortgage infrastructure.
- Configured Spring to manage objects and set their dependencies in a Spring context file and integrated middle tier with Spring application framework.
- Developed ORM mappings using Hibernate annotations and established data integrity among all tables sitting on Oracle Database.
- Used EJB and JPA to display values from DB2 database on screen and to fix lots of bugs and enhancements for screen.
- Worked with offshore team and coordinated the requirements on shared basis.
- Responsible for setting up the multi node cluster for OCP & creating, managing necessary pods for respective docker images for the micro services-based architecture.
- Responsible for preparing design document and delivery of batch applications, un-block technical impediments for the team, cross team interactions, code review, client interaction on daily basis, manage offshore deliverables.
- Extensive working experience in setting up WebLogic cluster environment, including WebLogic Domains, Admin Servers, Managed Servers, and Node Manager

Environment: Java8, Spring Boot, Hibernate, Maven, Gradle, IBM SOA, JSF, Oracle WebLogic Application Server12c, PostgreSQL, Selenium, MongoDB, Cloud native, Kubernetes, Docker, Spring Retry, Istio, GIT, JFrog, CI/CD.

Role: Java/J2EE Developer

Client: Anthem Inc, VA.

Aug 2016 – Aug 2020

- Analyzed technical requirements that has been shared by the System Analyst to come up with technical requirements and design for the project.
- Configured the spring framework for the entire business logic layer for new interfaces.
- Developed one-to-many, many-to-one, one-to-one annotation-based mappings in Hibernate.
- Designed the Backend-API using mongoose with express framework. Connected to the Mongo database using Mongoose.
- Extensively used NodeJS tools like Gulp, Grunt, web pack. Developed internal CLI applications using commander module for application build.
- Developed microservice on boarding tools leveraging Python and Jenkins allowing for easy creation and maintenance of build jobs and Kubernetes deploy and services.
- Designed and developed asynchronous RESTful Microservices using Spring boot, Couchbase and RX Java that are consumed by other microservices with an average response time of 30ms.
- Implemented several Asset Related RESTful web services in TDD environment.

- Implemented the Micro services using Spring Boot and Spring Cloud and used Spring MVC framework for building the application based on MVC design paradigm.
- Used NodeJS to run Grunt Tasks and build properly the project (compile, minify, concat, etc.,)
- Utilized Kubernetes for the runtime environment of the CI/CD system to build, test deploy.
- Responsible for managing AWS resources in cloud and maintain Continuous Integration and Continuous Deployment pipeline for fast paced robust application development environment.

Environment: Java, Spring ORM, Spring Integration, Spring Batch, Hibernate ORM, Spring Security, SOAP web services, Restful services, Microservices, ReactJS, Express JS, JUnit, Log4J, NodeJS, GitHub, Maven, Mongo DB, Web sphere, IBM DB2, Linux and Windows.

Role: Java Developer

Client: Meridian Soft, Hyderabad, India

June 2012– Dec 2014

- Worked in Agile methodology, understanding user requirements in design discussions and implementation feasibility analysis both front-end and back-end.
- Worked on Application Modeling, developing DAO layer with Hibernate standards to access data from IBM DB2 through the JPA layer, creating Object-Relational Mappings, and writing PL/SQL procedures and functions.
- Used Multithreading to invoke the database and implemented complex modules that contain business logic using Collection, Reflection, and Generics API.
- Focused primarily on the MVC components such as Dispatcher Servlets, Controllers, Model, View Objects, and View Resolver.
- Created the action and form classes, based on the Struts framework, to handle the pages and, wrote JavaScript for client-side validation, worked on web pages using HTML, CSS, and JSP.
- Involved in the development of RESTful Web Services using Spring MVC to extract client-related data.
- Used Spring (MVC) architecture to implement the application using the concrete principles laid down by several design patterns such as Session Facade, Business Delegate, Bean Factory, Singleton, Data Access Object, and Service Locator.
- Developed a data access layer and components using JPA/Hibernate frameworks with Spring framework support for object persistence to DB2.
- Developed Web Services using WSDL, and SOAP to communicate with the other modules.
- Migrated web application from Tomcat to WebLogic Application Server deployment environments.

Environment: Java, JavaScript, JSP, JPA, JSF, JMS, HTML, CSS, Servlets, Struts, Hibernate, Spring, Web Services, XML, IBM DB2, PL/SQL, Oracle, Eclipse, Junit, Log4j, WSDL, SOAP, POJO, AJAX, Apache Tomcat, WebLogic.
