

Name: Sreehaas Payidi
Email: sreehaaspayidi99@gmail.com
Phone: +1 (682) 306-9196
Role: Java Full Stack Developer

ABOUT ME:

I have **9 years** of experience in designing, analysing, developing, integrating, implementing, and maintaining enterprise applications using Java/J2EE technologies. Well-versed in SDLC, Agile/Scrum, Waterfall, and TDD methodologies, with experience in developing applications using various Java technologies like Hibernate, Spring Framework, RESTful Web Services, and Micro services. I have expertise in working with different databases, web servers, IDEs, and testing frameworks. I have also deployed applications using Apache framework tools such as Maven, ANT, Gradle, and Hudson and deployed applications on AWS EC2 instances and S3.

PROFESSIONAL SUMMARY:

- Experience of around **9 Years** in Design, Analysis, Development, Integration, Implementation, and Maintenance of Enterprise Applications using **Java/J2EE technologies**.
- Used the best practices of **SDLC** as well as **Agile/Scrum, Waterfall, TDD** methodologies.
- Well versed with **AGILE methodologies** and experience in Iterative development, Continuous Design, Refactoring, Continuous Integration and Test-driven development.
- Knowledge in developing applications using **Java/J2EE** technologies Hibernate, Servlets, JSP, JSF, AJAX, JDBC, JNDI, GWT JavaBeans, JSTL, Swing, Struts, XML, Web Services, JMS.
- Experience on Spring Framework – **Spring Core, Spring DAO, Spring IOC, Spring MVC, Spring ORM, Spring AOP, Spring Boot, Spring Web flow** and hands on experience in working with **Spring Batch** for monitoring, logging into the application, tracing, application support, transaction and resource management.
- Good working experience with **Java 8** features like Lambda Expressions, Streams API, Date Time API, Default and Static methods in Functional Interfaces.
- Developed and debugged Java-based applications using **Visual Studio**, integrating it into the build process with Maven for efficient project management.
- Good command and knowledge in working with **core java concepts** like Collection frameworks, Interfaces, Synchronization, Serialization, Thread pools, JavaBeans, Externalization, Generics and Annotations.
- Proficient in developing front-end systems with **JavaScript, jQuery, Ajax, Bootstrap, HTML**.
- Experience in developing **Microservices** using spring framework.
- Experience in developing **RESTful Web Services** using **spring framework**, POSTMAN for testing the same.
- Knowledge in Middleware persistence frameworks like **Hibernate/JPA 2.1** Entities for mapping Java classes using **Hibernate Query Language (HQL), HSQL Named Queries, Criteria, Projections**.
- Used Spring Core Annotations for Dependency Injection Spring DI and Spring MVC for REST API s and Spring Boot for micro-services.
- Experienced in working with databases like **Oracle 10/11g, SQL Server, MySQL, DB2, and NOSQL Databases**.
- Experience in configuration and deployment of multi-tier applications using different web servers like **Apache Tomcat, WebSphere, and Apache HTTP Server**.
- Experience in working with different **IDE's** like Eclipse, Rational Application Developer (RAD), NetBeans, IntelliJ, STS (Spring Tool Suite), Visual Studio, Dream Viewer.
- Good Knowledge in XML technologies including **XML, XSD, XSLT, (DOM, SAX), SOAP, WSDL**, Web Services using **AXIS**
- Expertise in **PBX (Private Branch Exchange)** systems and telecommunication networks for enhancing enterprise communication.
- Developed and optimized backend microservices using **Go**, improving application performance and reducing latency in high-transaction environments.
- Implemented **RESTful APIs in Go** to handle efficient inter-service communication, ensuring low-latency interactions across various systems.
- Designed and developed IVR workflows using **Genesys Interactive Routing Designer (IRD)** to streamline call routing logic.
- Optimized **Genesys IRD** routing strategies for enhanced call flow efficiency and reduced Average Handling Time (AHT).
- Integrated Go with existing Java-based services to enhance system scalability and modularity.
- Hands-on experience with setting up and managing telephony systems, including **IVR and multi-channel contact** center systems for seamless customer interactions.
- Experience with **Genesys Cloud CX or Pure Connect** for managing multi-channel contact center operations.

- Skilled in designing, implementing, and troubleshooting telecommunication infrastructures to optimize call routing and reduce downtime.
- Conducted end-to-end testing of **Genesys ORS** workflows to validate functionality and accuracy of routing logic.
- Enhanced existing **Genesys ORS** workflows by implementing new business rules and optimizing for scalability.
- Experience in Monitoring and optimizing contact center KPIs such as average handle time (AHT), service levels, and first-call resolution (FCR) using analytics tools.
- Proficiency in developing Model View Controller (**MVC**) Architecture based applications using Struts and Spring Frameworks.
- Developed and maintained **shell scripts** for automating tasks such as data processing, log management, and system monitoring, enhancing operational efficiency and reducing manual effort.
- Experience in Troubleshooting and resolving technical issues in Genesys environments, including system outages and application errors.
- Designed and implemented **data pipelines** to ingest and integrate large volumes of structured and semi-structured data into **Snowflake**, ensuring seamless integration with external data sources like AWS S3 and other cloud platforms.
- Utilized **Redis** for caching and high-performance data retrieval, reducing database load and improving application speed by 20%.
- Developed and optimized **data models** and schemas within **Snowflake** to support high-performance querying and reporting, facilitating more efficient data retrieval for analytics and business intelligence.
- Expertise in using **Spark** for large-scale data processing, real-time stream processing, and data analytics.
- Skilled in optimizing **Spark** jobs through techniques like partitioning, caching, and tuning resource configurations.
- Experience in implementing real-time data processing pipelines using **Spark Streaming** for low-latency and fault-tolerant processing.
- Designed and optimized **SQL queries**, **PL/SQL** stored procedures, and triggers for efficient data retrieval and processing within **Oracle 10/11g environments**.
- Worked on database optimization projects to enhance query performance, achieving a reduction in query execution time.
- Strong front-end **UI** development skills using **scripting languages** like HTML5, CSS3, JavaScript, jQuery, AJAX, JSON, Ext Js, **ReactJs**, DOM, JSP, **jQuery** Plug-ins.
- Strong understanding of **React.js** concepts such as components, state management, and virtual DOM.
- Skilled in using **Redux** for state management, **React Router** for navigation, and Axios for API integration.
- Deep understanding of **React Lifecycle** methods and **hooks**, optimizing component rendering and performance.
- Hands-on experience in designing and developing Single Page Application (SPA) using **Angular JS**, **Node JS**, **Express JS**, **ReactJS** and other UI technologies such as Bootstrap and HTML.
- Strong experience in writing Angular JS Modules, Services, Controllers and in developing components using Custom Directives.
- Configured and managed job schedules using **Control M**, orchestrating complex workflows and ensuring timely execution of critical processes.
- Monitored job status, resolved job failures, and implemented preventative measures, reducing system downtime by 65%.
- Implemented and managed job scheduling using **Control M**, ensuring efficient execution of batch processes and workflows in a large-scale enterprise environment.
- Designed and developed complex job streams in **Autosys**, incorporating dependencies, time-based scheduling, and event-driven triggers to optimize system performance.
- Familiar with NLP and Machine Learning basics, especially in enhancing chatbot functionality and customer experience optimization.
- Extensive experience in end-to-end design, analysis, development, unit testing, and debugging for large and complex Java/J2EE systems, utilizing tools like JUnit for ensuring code quality and minimizing defects.
- Extensive experience in Java Full Stack Development, with additional expertise in Site Reliability Engineering (SRE) practices and managing ELF binaries for optimized software deployment.
- Implemented migrations from **SQL** to **NoSQL databases** such as **MongoDB** and **Cassandra**.
- Good experience on CI/CD using **Ansible**, **ANT** and **Jenkins** on **WebSphere**, **WebLogic**, **JBoss** and **Tomcat**
- Experience in using different version controlling/tracking systems **Subversion**, **CVS**, **GIT**, and **Rational Clear Case**.
- Actively **mentored junior developers** on best practices for coding standards, responsive designs, and MVC frameworks to improve team expertise.
- Contributed to **Scrum processes**, suggesting performance optimizations during sprint retrospectives, and participated in product refinement meetings.
- Proficient in multiple modern programming languages including **Java**, **JavaScript**, and **Node.js**, with experience in leveraging the best practices of each for both front-end and back-end development.

- Partnered with QA and design teams to **own the quality of web applications**, ensuring adherence to performance and scalability goals.
- Contributed to **continual improvement** by implementing team-wide coding standards and design techniques for maintainable solutions.
- Built and Deployed applications using **Apache framework tools** such as Maven, ANT, Gradle and Hudson.
- Expertise in Testing with JUnit Framework using Mockito, Easy Mock, Spring Junit Runner and JMeter.
- Used testing environments like **Junit, Selenium, and Jenkins** and used logging tools such as **Log4j**.
- I have knowledge of Java Message Service (JMS) MQ's like **Apache Kafka, IBM MQ and Active MQ**.
- Experience in developing and utilizing **JAR, WAR, EAR** files with building tools like **Maven, ANT, and Gradle**.
- I worked with **Log4j** for logging and used **JUnit** and **Mockito** for unit testing and integration testing.
- Experience in implementing and deploying **Java EE** design patterns such as **MVC, Singleton, Factory, DAO, DTO** and **Business Delegate** in the development of multi-Tier distributed Enterprise Applications.
- Excellent in deploying the applications in **AWS** as **EC2** instances and creating snapshots for the data that must be stored in **AWS S3**.

TECHNICAL SKILLS:

Java/J2EE Technologies	Java 6/7/8/17, J2EE, Servlets, JSP, JSTL, JDBC, Hibernate, JPA, Spring Framework (Spring Core, Spring MVC, Spring DAO, Spring AOP, Spring Boot 3.x), RESTful Web Services, Microservices, JavaBeans, Visual Studio, JMS, Web Services (SOAP/REST), Executor Framework, Java 17 features like Records, Sealed Classes, and Pattern Matching, Genesys Cloud CX or Genesys Pure Connect
Languages	Java SE 6/7/8, Java 1.6/1.7/1.8/J2EE
Web Technologies	HTML, JavaScript, CSS, XML, Node, React
Frameworks	Struts, Spring, Spring-Data, Spring JDBC, Hibernate, JPA, Spring Core, Spring ORM, Spring MVC, Spring AOP, ReactJS, AngularJS, NodeJs, Kafka, Apache Kafka, RabbitMQ, AWS SQS, JMS, Active MQ, AWS CloudWatch, Datadog, PagerDuty
Web/Application Servers	Web Logic, WebSphere, Apache Tomcat, JBOSS
Testing	Junit, SOAP UI, POSTMAN, gdb, read elf
Version Control Tools	GIT, SVN, CVS
Build Tools	Ant, Maven, Gradle
Methodologies	Agile (Scrum), Iterative
Database Environments	Oracle, PostgreSQL, MySQL
Standards & Protocols	HL7, FHIR.

PROFESSIONAL EXPERIENCE:

Client: Wells Fargo, Charlotte NC

Sep 2022 – Till Date

Role: Sr. Java/IVR Developer

Description: The Wells Fargo Banking System project is designed to create a comprehensive platform that meets the modern needs of both retail and corporate banking customers. The core value of project aimed to provide a seamless, 'secure, and user-friendly interface for managing a wide array of banking operations online.

It supports various functionalities, including account management, fund transfers, bill payments, loan applications, and investment tracking. Customers could easily manage their accounts, check balances, and review transaction histories. The system also supported inter-bank and intra-bank fund transfers, allowing users to transfer money with ease and confidence. One of the significant features of this project was the bill payment module, which integrated with multiple utility providers, enabling users to pay their bills directly from their bank accounts. This feature aimed to enhance customer convenience and streamline payment processes. Additionally, the system facilitated loan applications, allowing users to apply for personal, home, or auto loans, track their application status, and manage their loan accounts post-approval. The platform has also included functionalities for managing payroll, handling bulk payments, and tracking corporate expenses. It provided detailed reports and analytics to help businesses monitor their financial health and make informed decisions. The System supported high transaction volumes, while the front-end offered an intuitive and accessible user experience across various devices, including desktops, tablets, and smartphones.

Responsibilities:

- Part of an **agile** environment with bi-weekly sprints and daily **Scrum** meetings with backlogs and story points.
- Involved in multi-project development, maintenance and release processes of the **Software development life cycle (SDLC)**.

- I participated in daily sprint calls and offshore meetings from Webex.
- Worked on a migration IVR-Next gen application using Avaya Orchestration designer as a tool from the Peri pro.
- Maintaining Volumes, Creating Snapshots and Security Groups in AWS.
- Consumed and utilized SOAP Web Services by installing SSL on the JDK.
- Used AWS S3 to store data and to retrieve it and used Elastic Search for searching the document.
- Designed and created database architecture for the table structure and created different entities in Java to map it to the Cassandra tables.
- Used GSON and DataStax API to map different entities in the Cassandra table.
- Followed the DAO design pattern in creating the framework code for prompt and collect, menu, Announcement and different data blocks.
- Designed and implemented data pipelines using Apache Spark for processing large datasets from various sources such as **AWS S3** and **Hadoop**, improving data processing efficiency by 40%.
- Designed and developed scalable data pipelines using **Apache Spark** and **Java** to process high volumes of customer transaction data, improving the efficiency of batch and real-time processing
- Involved in the development of DOM parsing, SQL procedures and in development of IVR in VXML, CCXML by using Java and JSP.
- Designed and implemented scalable, secure, and robust application systems using Java/J2EE and Spring technologies, specifically aligned with modern banking architecture for handling high transaction volumes and integration with third-party banking APIs.
- Designed and implemented responsive web layouts using fluid grids, **CSS3** frameworks, and **HTML5**, ensuring compatibility across devices and browsers.
- Integrated **SVG** graphics and sprites for efficient resource loading and scalable graphics across web applications.
- Developed and optimized **cross-browser page layouts**, ensuring consistency and performance across modern browsers like Chrome, Firefox, and Edge.
- Enhanced website performance by implementing **lazy loading** techniques and reducing page load times.
- Ensured web accessibility compliance by incorporating **WCAG** standards and **semantic HTML5 elements**.
- Provided **run support for high-availability applications**, quickly diagnosing and resolving production issues to ensure 99.9% system uptime.
- Configured and managed job schedules using **Control M**, orchestrating complex workflows and ensuring timely execution of critical processes.
- Monitored job status, resolved job failures, and implemented preventative measures, reducing system downtime by [specific %].
- Implemented and managed job scheduling using **Control M**, ensuring efficient execution of batch processes and workflows in a large-scale enterprise environment.
- Used Angular 2 Framework for the development of web application using Ajax, DHTML and DOM scripting.
- Performed web Page Applications using Angular JS with other development teams.
- Implemented a python sync daemon by utilizing Redis for high performance.
- Worked on AWS Data Pipeline to configure data loads from S3 to Redshift.
- Implemented Jenkins for Continuous Integration (CI) Builds automated Notifications.
- Implemented **ETL workflows** to ingest, transform, and store large datasets from multiple sources, ensuring seamless integration with existing banking systems and facilitating data-driven decision-making.
- Consumed Web Services for transferring data between applications and Used JAX-WS, SOAP in creating different modules of the project like activation and authentication of the caller.
- Configured and maintained **Autosys** calendars, global variables, and job parameters to support dynamic scheduling requirements across multiple applications.
- Leveraged **Spark SQL** to analyze large datasets, generating actionable insights that improved operational decision-making and customer experience analytics.
- Experienced in writing detailed documentation for complex Java/J2EE systems, with a strong focus on unit testing and debugging using JUnit, ensuring seamless integration and error-free deployments.
- Optimized **Spark jobs** by tuning partitioning strategies and resource configurations, reducing job execution time by 25% and improving **cost-efficiency** on **AWS EMR**.
- Implemented automated infrastructure monitoring using AWS CloudWatch, achieving 99.9% uptime as part of SRE practices. Managed ELF files for efficient software deployment, using gdb and readelf to optimize and debug binaries.
- Optimized **Snowflake queries** and **data warehouse** performance by implementing partitioning, clustering, and **materialized views**, resulting in a 30% reduction in query processing times
- Ensured **data security** and compliance by leveraging **Snowflake's data encryption** and **role-based access control (RBAC)** features, ensuring secure data management and adherence to industry standards.
- Collaborated with **data scientists** and business analysts to gather requirements and deliver **high-quality data solutions**, enhancing data accuracy for real-time reporting and analytics.

- Utilized **Redis** for caching and high-performance data retrieval, reducing database load and improving application speed by 20%.
- Working on converting tomcat-based application to a liberty profile for the deployment of EAR file.
- Used **Java 8** features like Lambda Expressions, Stream API's, creating resource classes, fetching documents from databases and **Core Java** API's, Collections, Threading, Exceptions and Interfaces to develop java applications.
- Used **Java 8**, Lambda expressions (for code optimization and improved performance).
- Worked with **Spring** Features like **Spring MVC, Spring DAO, Spring Boot, and Spring Batch**.
- Implemented **Spring Boot** controllers, components, and services to read/write data to/from **SQL** and **DB2** data sources. Implemented user authority management with **Spring Security**.
- Interpreted and analyzed **SIP (Session Initiation Protocol) based VoIP (Voice over IP)** traffic for enhanced call quality and reliability.
- Provided production support by identifying and resolving critical issues in real-time applications, ensuring 99.9% system uptime.
- Led root cause analysis and implemented solutions for recurring production defects, reducing system downtime by 30%.
- Implemented automated monitoring solutions to proactively troubleshoot issues in production environments, improving issue detection and resolution speed.
- Experience in troubleshooting SIP messaging, media flow, and codecs to ensure smooth communication across telephony systems.
- Created Front end pages Using JSP's and handled the server-side logic in EJB 3.0 and Servlets.
- Used **Spring MVC** transaction Management, Spring/Hibernate Batch Transactions & Hibernate cache concepts.
- Designed, Configured and deployed **Amazon Web Services (AWS)** for a multitude of applications utilizing the **Amazon cloud formation**.
- Deep understanding of business processes and architecture, enabling effective collaboration with cross-functional teams to optimize solutions in line with client business needs.
- Utilized **Snowflake's Snow pipe** for **real-time data ingestion** and **streaming analytics**, enabling real-time decision-making and monitoring of business operations.
- Monitored and troubleshooted **Spark** and **ETL pipelines** using **AWS CloudWatch**, achieving **99.9% uptime** and ensuring high availability and reliability of banking operations.
- Designed conversational flows for customer interactions in IVR using VXML/CCXML, optimizing user engagement and response times. Currently expanding expertise into **Genesys Cloud CX** for enhanced multi-channel contact center solutions.
- Collaborated with cross-functional teams to implement custom call routing rules based on business requirements.
- Performed troubleshooting and debugging for **Genesys IRD** workflows, ensuring optimal system performance.
- Integrated speech recognition and **DTMF** input handling into IVR designs for enhanced user interaction.
- Implemented and maintained **Active MQ** messaging services to ensure smooth communication between distributed systems, improving application performance.
- Developed and deployed routing workflows using **Genesys Orchestration Server (ORS)** to facilitate intelligent call routing.
- **Integrated Genesys ORS** workflows with backend systems, including databases and APIs, for real-time decision-making.
- Managed and monitored ORS-based workflows to ensure high availability and low-latency performance.
- Experienced in setting up **Amazon EC2** instances, virtual private cloud (VPCs), and security groups. Setting up databases in **AWS** using **RDS**, storage using **S3** bucket and configuring instance backups to **S3** bucket.
- Implemented **Spring Boot Microservices** to divide the application into various sub modules. Used micro-services architecture with spring-based services to integrate user libraries in the application.
- Developed **REST Web services** to make web service calls simple and easy for the client to access it with the help of standard **HTTP** URLs.
- Deployed and Monitored **Microservices** Using Pivotal Cloud Foundry, also Managed Domains and Routes with the Cloud Foundry.
- Developed reusable and interoperable web service modules based on service-oriented architecture (**SOA**) by using **SOAP** and **RESTful** services. Created **GET/PUT** request and response using **RESTFUL** web services.
- Handled response data from **RESTFUL** Webservices using **XML, JSON** and **jQuery** to update **UI** Interacted with java controllers. Converted **EJB's** to **RESTful** web services using **spring boot**.
- Migrated RESTful APIs and microservices using **Node.js** and **Express.js**, ensuring high performance and scalability.
- Implemented **disaster recovery** strategies and backup mechanisms within **Snowflake**, ensuring data availability and minimizing downtime during system outages.
- Implemented authentication and authorization mechanisms using **OAuth 2.0** and **OpenID Connect**, providing secure access control to web applications and APIs.

- Integrated with identity providers and external authentication systems, such as **LDAP**, for single sign-on (SSO) functionality.
- Utilized SCIM (System for Cross-domain Identity Management) for user provisioning and management, automating user lifecycle processes and reducing administrative overhead.
- Designed various tables required for the project in **Oracle database**, using Stored Procedures, Triggers and Functions on **SQL Server** as well as **PL/SQL** on **Oracle** to support both databases for the application.
- Worked on **Oracle** as the backend database and integrated with spring to retrieve Data Access Objects.
- Experienced in development and implementation of **Hibernate** with Spring Data Access. Extensively used **Hibernate** concepts such as inheritance, lazy loading, dirty checking, locking, and transactions.
- Used **Spring Framework** for Authentication and Authorization along with **Hibernate Tool** for supporting **ORM** components. Developed the persistence layer using **Hibernate Framework**, created the **POJO** objects and mapped using **Hibernate annotations** and **Transaction Management**.
- Built dynamic and interactive user interfaces using **React.js** with component-based development and creating reusable **UI components** to enhance code maintainability and scalability.
- Integrated **React** applications with **RESTful APIs**, facilitating data fetching, and updating **UI components** based on server responses.
- Managed and developed speech recognition systems for **voice-enabled IVR systems**, enhancing user interaction through natural language processing.
- Managed IVR systems, including troubleshooting and optimizing performance for seamless customer interactions, ensuring 99.9% uptime across telephony platforms.
- Monitored and analyzed contact center metrics like **average handle time (AHT)**, **first-call resolution (FCR)**, and service levels to enhance customer experience and operational efficiency.
- Collaborated with IT and business units to implement system enhancements, upgrades, and improvements, optimizing contact center workflows.
- Created and optimized grammar for speech recognition, ensuring accurate command interpretation and improving system efficiency.
- Integrated speech recognition systems with back-end services to provide real-time, automated responses in customer service environments.
- Maintaining the business standards in EJB and deployed them in **WEBSPPHERE 7** application server.
- Created and used Context API for managing global state within **React** applications, providing an alternative to **Redux** for smaller scale projects.
- Worked on performance profiling tools like **React Developer Tools** and **Chrome DevTools** for identifying and addressing performance bottlenecks.
- Experienced in writing unit tests and integration tests for **React** components using testing libraries such as **Jest** and **Enzyme**.
- Experienced in deploying applications on **Apache Tomcat**, **WebLogic** and **Apache** servers.
- Implemented **CI/CD** jobs in **Jenkins** and deployed the application on **EC2** instance using **OpenShift**, **Docker**.
- Experienced in building automation using **ANT**, **Maven**, **Jenkins**.
- Involved in the process of converting the deployment to Jenkins based continuous build, while integrating with **TFS-Git** and **CVS** source controllers.

Environment: Java 8, J2EE, JavaScript, jQuery, JWT, JSP, JSTL, AJAX, CSS, HTML, JDBC, Oracle, PL/SQL, Hibernate ORM, JMS, Tomcat in AWS EC2 instances, S3, SNS, SQS, AWS Lambda, CloudWatch, CloudTrail, Serverless, Apache Camel, Kafka, WebLogic, Docker, Node JS, AngularJS, JSP, Spring IOC, Spring MVC, Spring Boot, Spring AOP.

Client: Experity Health, Atlanta, GA

Feb 2022 – Aug 2022

Role: Sr Java Full stack Developer

Description: Project ProHealth allows hospitals to maintain patient information. ProHealth is a sole case management automation tool used by all hospital workers responsible for case management activities and Front desk operations. ProHealth supports the reporting of data to the Care Analysis Reporting System. Within the project, there are different modules like intake management, case management, financial management and administration.

Responsibilities:

- Involved in multi-project development, maintenance, and release processes of the **Software development life cycle (SDLC)**.
- Planning, analysis, design and implementation of different modules using **Agile** (Scrum) Methodology.
- Involved in Daily Scrum meetings, Sprint planning and estimation of the tasks for the user stories, participated in retrospective and presenting Demo at end of the sprint.
- Developed business layer components as Stateless Session Beans based on EJB API.
- Build the application based on new features of Java JDK 1.8 features at service layer level.

- Integrated **HL7** and **FHIR standards** into healthcare applications to ensure seamless data exchange and compliance with healthcare protocols.
- Involved in Construction of UI using **HTML, JSP, CSS, Bootstrap, jQuery, and JavaScript**.
- Created servers on Node JS to deliver static content and made API calls to REST API accordingly.
- Involved in debugging and performance tuning for high-volume IVR systems, ensuring seamless customer interactions. Gaining experience in troubleshooting **Genesys Cloud CX** configurations for contact center optimization
- Built interactive user interfaces using **AngularJS and React**, leveraging **MVC frameworks** and common JavaScript design patterns.
- Utilized **CSS3** features and preprocessors such as **SASS** to implement responsive web designs for healthcare management tools.
- Improved web page performance by employing design techniques like **lazy loading** and minimizing resource usage.
- Designed and developed business components using **Spring Boot, Spring Dependency Injection (Core), Spring AOP, and Spring Annotations**.
- Designed and optimized scalable data pipelines for contact center data processing using **Apache Spark**, improving call metrics analysis and reporting efficiency.
- Implemented and optimized monitoring and troubleshooting processes for high-volume IVR systems, identifying and resolving technical issues in real time.
- Developed the data access layer components as entity Beans based on EJB API.
- Developed and integrated **RESTful APIs** with **AngularJS** and **React** front-end systems, adhering to coding standards and secure designs.
- Ensured adherence to **backend frameworks** like Spring Boot for scalable and maintainable API development.
- Refactored existing monolithic application by identifying components that needs to be transformed to **Microservices** architecture, with **Spring Boot** based services interacting through a combination of **REST, RabbitMQ** and AWS API-Gateway.
- Used spring framework's **MVC framework** to better control the presentation, business and navigational aspects of the applications.
- Developed **Restful web services** for produce and consumed the services by making Web Service calls to remote services in different applications to get the patients information and their claim numbers etc...
- Used **AWS SDK** for connection to **Amazon S3 buckets** and **EC2** to deploy Docker containers with **Microservices** architecture.
- Leveraged **AWS services**, including **S3, EMR, and Glue**, build and manage scalable data pipelines that process large healthcare datasets, ensuring compliance with healthcare regulations.
- Integrated Apache Kafka with Spark Streaming to handle real-time data ingestion and processing for high-availability customer service systems.
- Integrated **Snowflake** for scalable data storage and retrieval, optimizing the platform for fast query performance and enhanced data analytics capabilities.
- Developed and maintained **data models and schemas** for various healthcare modules, ensuring accurate data flow and documentation across different application layers.
- Developed complex data transformation and aggregation workflows using **Spark Data Frames** and **RDDs**, enhancing the processing and analysis of banking transactions and customer data.
- Configured and implemented Spring Application Context to instantiate all bean classes in **Spring MVC application framework**.
- Deployed the EJBs on Web Sphere.
- Used **Microservices architecture** with **Spring Boot** based services interacting through a combination of **REST** and **Apache Kafka** message brokers.
- Designed and developed **Microservices** business components and **RESTful** service endpoints using spring core. Moreover, converted a monolithic app to **microservices** architecture using Spring Boot using 12-factor app methodology.
- Troubleshooted and resolved **Autosys** job failures, performing root cause analysis and implementing preventive measures to improve overall system reliability.
- Built and deployed Spring Boot 3.x microservices, leveraging advanced Spring features to create scalable, secure, and high-performance APIs.
- Implemented automated infrastructure monitoring using AWS CloudWatch, achieving 99.9% uptime as part of SRE practices. Managed ELF files for efficient software deployment, using gdb and readelf to optimize and debug binaries.
- Collaborated with cross-functional teams to integrate **Autosys** with various enterprise applications, ensuring seamless data flow and process automation.

- Consumed Web Services to interact with other external interfaces in order to exchange the data in the form of **XML** and by using **SOAP**.
- Used **Hibernate** object relational data mapping framework to persist and retrieve the data from database.
- Designed and Developed Module based persistence layer under the guidance of DAO design pattern, ORM/JPA principles, using **Hibernate**.
- Created and managed the messages asynchronously by creating queues on **Rabbit MQ** server and involved in implementing the client layer using Spring AMQP framework to consume messages.
- Built **NoSQL** schemas to store document and maintain sessions in **MongoDB**.
- Developed and managed asynchronous messaging systems using Apache Kafka for real-time data streaming and event-driven architecture.
- Utilized AWS services (EC2, S3, RDS, Lambda, CloudWatch) for deploying, monitoring, and scaling microservices and databases in a cloud environment.
- Designed and implemented NoSQL databases like MongoDB and Cassandra, ensuring flexible and scalable data storage solutions.
- Developed backend services and APIs using **Node.js** and **Express.js**, ensuring adherence to RESTful principles and best practices.
- Designed and implemented data models and schemas using **MongoDB** and **Mongoose ORM**, ensuring data integrity and consistency.
- Developed user-facing features and reusable UI components using **React.js**, ensuring high performance and responsiveness.
- Implemented state management using **Redux** to manage application state in large-scale applications, improving maintainability and scalability.
- Utilized **React Router** for client-side routing to create a seamless **single-page application (SPA)** experience.
- Integrated **RESTful APIs** with Axios for data fetching and updating, ensuring smooth data flow between the client and server.
- Implemented unit tests using **Jest** and **React Testing Library** to ensure code reliability and maintainability, achieving high test coverage.
- Packaged and deployed the application in **IBM WebSphere Application** server in different environments like Development, testing etc.
- Used SOAP UI to test **SOAP Web Services**.
- Developed Single page application and structured the **JavaScript** code using **AngularJS**.
- Used POSTMAN, Advanced Rest Client to test the **Restful Web services**.
- Used **log4J** for application logging and notification tracing mechanisms.
- Using **Git Hub** as Version Control System (Source repository).
- Using **JIRA** tool for Project management.
- Triggered the jobs in Jenkins for continuous integration and continuous deployments (**CI/CD**).

Environment: Java 8, JSP, Spring, JSTL, EJB, JMS, XML, XSLT, JDBC, AJAX, HTML, CSS, Bootstrap, JavaScript, Node.js, Restful, AWS, POSTGRES, SQL Developer, jQuery, Hibernate, JPA, Microservices, PL/SQL, AngularJS, JBoss, Docker, RabbitMQ, Log4J, Maven, Windows, Junit, Mockito, JIRA

Client: Logik Works, Hyderabad, India.

May 2019 – Jul 2021

Role: Java Full stack Developer

Description: Logik Works handles end to end Content needs and Project Management needs for any Educational Institutions. It automates bookkeeping, Curriculum Design, Exam Management - Compliance and reporting capabilities of the business, reduces human effort and increases efficiency.

Responsibilities:

- Involved in all phases of the Software development life cycle (SDLC) using **Agile** Methodology.
- Developed source code to consume **JSON** response received through **XHR/AJAX** calls using **JQuery**. **Ajax** calls.
- Worked on building & deploying Java code through Jenkins, used Jenkins **Amazon Web Services (AWS)** Code Deploy plugin to deploy to AWS and worked AWS Cloud management.
- Used **Java 8** features lambdas and **stream API** with collections.
- Developed complex **Multithreaded** Java applications for processing large volumes of data to achieve Multitasking.
- Created and managed **integrations** between internal healthcare applications and external services, ensuring seamless data flow and synchronization.
- Integrated third-party services into the existing system, such as payment gateways and identity management systems, improving application functionality and user experience.
- Automated workflows between internal systems and external APIs, enhancing data accuracy and system efficiency.

- **Expertise in JDBC Connection Pooling, Persistence, Caching, EJB Server, HTTP, HTTP Tunneling**
- Involved in component development using J2EE principles and used design patterns such as **Singleton, Factory and Data Access Object (DAO)** in the implementation of the application.
- Implemented **Microservices** Architecture, with **Spring Boot**-based services interacting through a combination of **REST** and **SOAP**.
- Designed and implemented **responsive e-commerce** platforms by integrating content management systems, improving efficiency for dynamic content updates.
- Leveraged **HTML5 APIs**, **CSS3** frameworks, and JavaScript libraries like **jQuery** for building dynamic and interactive web pages.
- Created and maintained **cross-browser-compatible** layouts to ensure consistent rendering and functionality across platforms.
- Worked on **fluid grid layouts** for scalable web designs that adapt to various screen sizes and devices.
- Implemented the application using **Spring IOC, Spring MVC Framework, Spring AOP, Spring Boot, Spring Batch, and Spring Cloud Data Flow** and handled the security using **Spring Security**.
- Designed and developed the End Points (Controllers), Business Layer, DAO Layer using Hibernate/JDBC template, **Spring IOC** (Loose coupling between layers) and published cross cutting concerns like Logging, User Interface exceptions, Transactions using **Spring AOP**.
- Involved in batch processing using **Spring Batch** framework to extract data from database and load into corresponding App tables.
- Troubleshooted and resolved issues in IVR workflows, improving call routing efficiency and reducing response times for customer queries
- Explored integration with conversational interfaces like **AWS Lex**, focusing on optimizing **NLP-based customer interactions**. Enhanced bot functionality through user feedback loops.
- Designed and developed multiple J2EE MVC based web applications using J2EE technologies EJB, Servlets, JSP , patterns and popular open-source frameworks like Struts, Spring, Hibernate
- Responsible for developing the sequential and conditional **batch jobs** using the **spring batch** framework.
- **Spring MVC** model integration for front-end request action controller.
- Participated in object-oriented design, development and testing of **REST APIs** using Java.
- Integrated **Spring DAO** for data access using **Hibernate**.
- Developed **SQL** Functions and procedures to interact with **SQL server**.
- Used **Spring Security** for Authentication and Authorization of the product application for login security for everyone.
- Implemented Restful web services using **JAX-RS** annotations, **Jersey** as provider and implemented security using **Oath**.
- Created webpages using **HTML5, CSS3, JavaScript, jQuery, AngularJS** and **AJAX** to create interactive front-end GUI.
- Developed Single page application and structured the JavaScript code using **Angular JS**.
- Used **Angular JS** to Implement rich functionality in various pages: form validation, search, sort, tags input, advanced directives, etc.
- Familiar in writing Custom Directives and services in **Angular JS**. according to the application requirement.
- Used **Nodejs** module to handle Restful calls to enable communication between view components and servers.
- Created reusable components in Angular Js based on the project need using Custom Directives. Services and Factories.
- Implemented **CI/CD pipelines** using **Jenkins** and **Spinnaker**, automating the deployment and monitoring of data pipelines for continuous integration and delivery
- Experienced in various Java persistence technologies like JDO, Hibernate, EJB-entity bean etc.
- Integrated with various third-party APIs and services for authentication, payment processing, and data synchronization, ensuring seamless integration and functionality.
- Developed unit test cases using **Junit** framework for testing accuracy of code and logging with **Log4j**.
- Worked with **Web Sphere application** server that handles various requests from Client and used **Jenkins** to perform continuous Integration.
- Worked on setting up **Maven** scripts to build, package, and deploy application code to the target **Web Sphere Servers** and worked on continuous integration servers like **Jenkins**.
- Worked with **Source Tree** version control tool for pulling and pushing the code changes and solved merge issue.

Environment: Java 1.8, J2EE, Eclipse RCP, Spring MVC, JSP, Rational Application Developer RAD, Hibernate, HTML, CSS, JavaScript, Talent, JSTL, jQuery, AngularJS, JUnit, Maven, Struts, Web Services (Restful), JSON, SVN, CVS, UML.

Responsibilities:

- Actively involved in requirement gathering and came up with proof of concepts (**POC**) for various scenarios.
- Building architecture design documents from business requirements, and overseeing the development, code quality and security of the application throughout the project life cycle.
- Implemented service layer offering **JSON or XML** data through **RESTful services** using CXF
- Involved in integration of components that form core group by exposing services for legacy modules and implementing new services with CXF.
- Extensively used **Spring components** and concepts like Aspect Oriented programming, Transaction Management, Dependency Injection, DOA and MVC
- Used **Spring JDBC** as ORM tool in persistence and developed POJO's and Data Access Object (DAO) to handle all database operations.
- Involved in UI development for various modules with **Spring MVC** combined with AngularJS and HTML.
- Configured and created **RESTFUL web services** from scratch
- Designed and developed functionality with excellent understanding of design patterns like singleton, List Iterator, Command, Factory etc.
- Involved in coding common logging service using **Log4j** to log the information, to track the problem during production support.
- Involved in Java/J2EE Design and EJB, Struts/JSP using MVC architecture.
- Hands-on experience in creating and consuming **RESTful Services** using AngularJS.
- Utilized **Backbone.js framework** to manage client-side models and views for dynamic single-page applications.
- Implemented **LINT tools** for validating JavaScript and CSS codebases, maintaining high-quality standards across projects.
- Designed lightweight and fast-loading web applications by employing **scalable SVG graphics and sprites**.
- Integrated popular **HTML5 APIs** (audio, video, etc.) into dynamic applications, enhancing the user experience.
- Used **GitHub** as version control and streamlined the code check-in process by implementing continuous build, continuous Integration/deployment using **Maven** build scripts.
- Used **Jenkins** as a continuous integration tool for the GIT version control setup
- Improved the code quality and code coverage to meet standards set in SonarQube.
- Collaborated with cross-functional teams, reported project status to client on daily basis and involved in release planning meetings.

Environment: Java, Spring, J2EE, JSP, JSTL, JavaScript, JQuery1.8, MyEclipse, WebSphere 7.0, ANT, SOAP, Apache CFX, JAX-WS, Web Services, AngularJS, Jenkins, GIT, Maven

EDUCATIONAL DETAILS:

Master of Science in Information Systems, Arlington, TX

08/2021--12/2022

The University of Texas at Arlington

B. Tech in Computer Science & Engineering, Bengaluru, India

01/2010--12/2014

Alliance University
