

Professional Summary

Experienced Full Stack Developer & Cloud Engineer with 10+ years of expertise in designing, developing, and deploying full-stack web applications. Skilled in building scalable backend services using Python and API-first architectures, as well as developing responsive frontend applications with JavaScript. Strong background in AWS native services, and Infrastructure as Code (IaC), with hands-on experience in secure, high-volume data processing of structured and unstructured datasets. AWS Certified with a proven track record of delivering reliable, scalable, end-to-end cloud solutions.

Technical Skills

- **Programming & Scripting:** Python, JavaScript, Node.js, Shell Scripting, SQL, NoSQL
- **Frameworks & Libraries:** Flask, FastAPI, Django, Pandas, NumPy, React.js, Hugging Face, LangChain, OpenAI API (LLMs)
- **Frontend Development:** HTML, CSS, JavaScript, UX/UI Design
- **Database & Data Modeling:** MySQL, Oracle, PostgreSQL, AWS RDS, AWS DynamoDB, MongoDB, Spark SQL, Data Modeling, Schema Design
- **Cloud & DevOps:** AWS (S3, Lambda, EC2, SNS, SQS, IAM, VPC, CDK, Glue, EKS), Cloud Engineering, CloudOps, Cloud Platform Engineering, Infrastructure as Code (IaC), Terraform, AWS CloudFormation, CI/CD (Git, Jenkins, GitLab), Docker, Kubernetes (AWS EKS), Elasticsearch, OpenSearch
- **Data & Analytics:** Apache Spark (PySpark), ETL Pipelines, Data Reporting, Visualization (NumPy, Matplotlib), Pandas
- **Data Streaming & APIs:** Apache Kafka, SFTP, AWS API Gateway, REST APIs, RESTful APIs, JIRA APIs, API Development, API endpoints, CRUD operations, Mutual TLS (mTLS), OAuth2, JWT, Swagger (OpenAPI)
- **Security & Data Protection:** AWS Cognito, mTLS API Endpoints, Encryption, Decryption, Access Controls
- **Monitoring & Governance:** AWS CloudWatch, Datadog, Logging, Auditing, Data Lineage, Compliance Frameworks
- **Methodologies & Tools:** Agile/Scrum, JIRA, Version Control, Automated Testing (Pytest, unittest), Code Reviews

Work Experience

Toyota - Plano, TX | Nov 2022 - Present

AWS Full Stack Developer

- Designed and developed scalable backend services and RESTful APIs using Python (FastAPI/Flask, Django) and Node.js, while building interactive frontend interfaces with JavaScript, React, and UX/UI technologies including HTML and CSS in serverless microservices architecture.
- Delivered cloud-native solutions on AWS using Lambda, S3, RDS, PostgreSQL, DynamoDB, EC2, and API Gateway, applying event-driven design patterns to handle scale and keep costs under control.
- Developed Python scripts for automation, data transformation, and process optimization, working with relational databases (MySQL, PostgreSQL) and NoSQL databases (DynamoDB, MongoDB) to support backend applications and cloud workflows.
- Implemented data modeling and schema design for both relational and NoSQL databases, optimizing performance and storage.
- Developed and maintained Infrastructure as Code (IaC) with Terraform and AWS CloudFormation to automate provisioning and deliver consistent, repeatable cloud deployments.
- Built AWS Lambda functions for real-time data processing, API orchestration, and transformation logic with robust error handling and validation.
- Orchestrated 100+ AWS Lambda functions for APIs, schedulers, and operations.
- Implemented 30+ secure REST API endpoints to handle CRUD operations with authentication using like OAuth2, JWT, input validation with strong error-handling and logging for reliable service delivery.
- Used Large Language Models (LLMs) to analyze unstructured documents and communication logs, making it easier to identify and classify consumer data. This helped automate DSAR handling, enforce policies, and detect risks early to stay compliant with CCPA.
- Integrated event-driven architectures using AWS SNS, SQS, and Apache Kafka for asynchronous processing and pub/sub messaging.

- Set up and maintained automated CI/CD pipelines with GitLab, Jenkins, and Git, streamlining deployments and ensuring fast, reliable releases.
- Deployed and managed services in Docker containers orchestrated with Kubernetes (EKS) for high availability and auto-scaling.
- Monitored production workloads using AWS CloudWatch and optimized applications for performance, reliability, and cost efficiency.

Cigna - Bloomfield, CT | Apr 2021 – Nov 2022

AWS Python Engineer

- Automated workflows using Python scripts and Terraform to implement infrastructure as code, making deployments scalable and reproducible.
- Implemented REST APIs with Python and integrated them with Kubernetes-based microservices to ensure seamless backend communication.
- Managed datasets with Pandas and NumPy and retrieved data from MySQL using Python to support efficient data processing and reporting.
- Developed complex SQL queries, stored procedures, and functions for data extraction, transformation, and reporting.
- Created AWS Lambda functions with Python and Boto3 that respond to HTTP requests via API Gateway, enabling serverless application workflows.
- Built ETL pipelines using S3 and AWS Glue to store data in Snowflake and optimize workflows.
- Optimized API performance by applying efficient data serialization (using JSON and XML) and caching techniques to reduce latency and improve response times.
- Designed and executed API testing strategies using Postman, Pytest, and Unittest to ensure reliability, functionality, and performance.

Verizon - India | Jun 2019 – Apr 2021

Software Engineer

- Designed and implemented backend systems and RESTful APIs in Python to enable efficient, scalable business workflows.
- Developed cloud native applications leveraging AWS services (Lambda, S3, API Gateway) to optimize operational efficiency.
- Automated data processing, integration, and reporting pipelines using Python and AWS, reducing manual effort and errors.
- Migrated legacy systems to Spark and Spark SQL for scalability.
- Converted JSON datasets into PySpark DataFrames for distributed processing and automated PDF report generation.
- Implemented CI/CD pipelines using GitLab to automate testing, deployment, and delivery of applications.
- Collaborated with analytics teams to deliver curated datasets for business intelligence and advanced analytics.
- Implemented infrastructure-as-code with Terraform and CloudFormation to ensure scalable and repeatable deployments.
- Monitored and optimized production workloads for high availability and cost efficiency.

SLK Software Services Pvt. Ltd. - Karnataka, India | Aug 2015 – Jun 2019

Software Developer

- Developed and maintained backend applications using Python, ensuring clean, efficient, and reusable code.
- Built RESTful APIs and integrated third-party services to support frontend applications and mobile clients.
- Wrote automated tests to improve code quality and reliability using frameworks like pytest and unittest.
- Developed custom Python scripts and modules for data extraction, cleansing, and validation, ensuring high data quality and consistency across multiple sources.
- Implemented performance tuning techniques to optimize data queries and pipeline throughput, reducing processing time by 40%.
- Collaborated with cross-functional teams to deploy and monitor data solutions in production, ensuring reliability and troubleshooting data issues proactively.
- Created comprehensive technical documentation and reusable code libraries to support long-term maintainability and knowledge sharing within the team.
- Followed Agile methodologies, participated in sprint planning, code reviews, and daily stand-ups to deliver high-quality data engineering solutions on time.

Education

- **Bachelor's degree** in computer science from Jawaharlal Nehru Technological University Hyderabad | May 2015

Certification

- **AWS Certified Solutions Architect – Associate** | [Credential URL](#)
Amazon Web Services (AWS)
Issued: July 29, 2025, | Expiry: July 29, 2028
