

SAI SRINIVAS DASARI

E-mail: saisrinivasdasari24@gmail.com

Strong hands-on experience in enterprise level testing/software engineering with a Bachelor's in Computer Science Engineering. Significant experience in developing requirements and tests from high-level design, specifications, and planning documents. Exposure to different types of testing like Automation, System, Functional, Regression, End-End, Integration, Smoke, Database, GUI, API, Black-box and White-box. Well conversant with software testing methodologies including, test data management, developing Test plans, Test scenarios, Test cases, Test procedures, Test reports and documenting manual and automation tests. Very proficient with Java, JavaScript, Python, VBScript, UFT, Selenium, JUnit, TestNG, jMeter, SQL, SDLC, Agile and Waterfall. Great collaboration with experience in leading large teams and mentoring them. Open to relocate and available to start immediately.

PROFESSIONAL SUMMARY:

- Experience in building teams as a QA Architect and leading teams as a QA Lead.
- Specialized in building COE teams to implement QA best practices across the organization.
- Software Engineer with 12+ years of experience in Software Testing (Automation and Manual) with a solid understanding of Requirement Analysis, Test Design, Test Planning, Test Execution, Defect Tracking.
- Experience in developing Automation frameworks (TDD, BDD, Keyword Driven, Functional Decomposition and Hybrid) and test scripts from scratch in JAVA, Gherkin, JavaScript, Typescript and VB Script languages.
- Specialized in writing GUI and API automated tests using HPE Unified Functional Testing – UFT.
- Expertise in Selenium automation for GUI, AI and DocuSign applications (Web and Mobile) using Selenium WebDriver, Selenium Grid, Cucumber, Appium, Espresso, JUnit and TestNG.
- Expertise in Automation Tool Selenium 2.0, UFT and performance testing tool jMeter and Load Runner.
- Experience in full **Software Development Life Cycle (SDLC)**, Agile, Scrum, Sprint, Waterfall and in-depth knowledge of contemporary QA/test principles and methodologies.
- Efficient in analyzing System Requirements, Use Cases, and other documents to gain overall understanding of the new application to determine the appropriate level of testing required and designing **end-to-end testing** framework that supports both **manual and automated**.
- Proficient in executing and managing the tests and defects in HP ALM and JIRA.
- Proven ability to plan, organize, conduct, and lead test efforts at all levels of the software development lifecycle in both Agile and predictive environments.
- Excels at building relationships between team members and across functional groups.
- Experience working in Retail, Banking and Finance domains.

EDUCATION:

Bachelor of Engineering in Computer Science, 2012, V.R. Siddhartha Engineering College (Acharya Nagarjuna University), Vijayawada, Andhra Pradesh, India.

TECHNICAL SKILLS:

Selenium/JAVA	SQL	Postman
Cucumber/Gherkin	Groovy	SOAP UI
UFT/VB Script	Appium	Azure DevOps
JavaScript	ALM	HTML and CSS
Eclipse	JIRA	Bash/Shell Scripting
Git	jMeter	DB and ETL
Bamboo	JUnit and TestNG	Bitbucket and CI/CD
Jenkins	XCUITest	Espresso
iOS and Android	Web and Windows	Mac OS

PROFESSIONAL EXPERIENCE:

Client: Wells Fargo, Minneapolis, MN

Jan 2023 – Dec 2024

Project: SMIS – Service Member Information System

Role: Lead Software Engineer (SDET)

Solution Environment: Java and API application in the front end, SQL and other interfaces in the back end.

Tools: Selenium, HP ALM 14.0, PL/SQL, JUnit, TestNG and JIRA

Responsibilities:

- Designed and developed the front end Java, JavaScript and Groovy based application along with testing ceremonies.
- Preparing the estimation for the project and gathering required QA resources and resource planning and utilization.
- Wrote stories, planned iterations, managed backlog in JIRA for team of eight testers both onsite and offshore.
- Automated UI, API and integration tests using Selenium Suite (Selenium WebDriver).
- Involved in **End-to-End** Testing and performed User Acceptance Testing for the applications.
- Used Selenium WebDriver APIs for writing JUnit and TestNG test suites and test cases for testing functionality.
- Performed Manual Testing of the application Front-End and Functionality.
- Performed Web Services and Apache REST testing using SOAP UI Pro.
- Strong knowledge on Java, JSON and Groovy to test both frontend and backend.
- Performed Integration Testing, Security Testing, Positive and Negative Testing.
- Scripted and worked on SQL statements to perform verification and validation of the DB and ETL systems.
- Created Mobile test scripts using Appium, Espresso and XCUITest across iOS, Android, Web and Mac OS platforms.
- Worked on Javascript, Python and SQL languages for automating tests end-to-end with Selenium, Playwright and Cypress across multiple browsers.
- Collaborated across several teams to deliver the scripts which can be used by multiple teams.
- Leveraged Azure DevOps and CI/CD pipeline experience to build, test and deploy changes.
- Experience in testing Informatica applications and testing of GUI, API and Database.
- Executed tests in virtual machines and reviewed test output; documented test results and defects; assisted developers with bug triage, reproduction, bug retest and fix verification.
- Performed Data Driven and Keyword driven Tests.
- Developing the Test Strategies, Test Plans during the entire SDLC process in Agile and defining the clear-cut entry and exit criteria.
- Preparing and Reviewing the Business Scenarios, Functional Test scripts and RTM.
- Review the code and test cases automated by the team members.
- Making effective follow ups to gather the test data from the external vendors and arrange, clarify the business functionality knowledge for the team so that they are more comfortable to meet the deadline.
- Preparation of Test Summary Report, lessons learnt and best practices.
- Using ALM and JIRA as management and defect tracking tools.
- Carrying out Quality Assurance activities for all deliverables, so that developed software meets the standards and guidelines defined and meet requirements specified by end users.
- Managing the resources and leveraged their efforts to produce a quality outcome.
- Led weekly QA status meetings, presented overall issue status to senior management, and coordinated issue resolution and release process with the development engineering teams.
- Apart from delivering a quality application, also suggested various improvements in user perspective.
- Finally walked through the deliverable with the customer to meet the exit criteria and avail a signoff from the customer for the quality deliverable.
- Created defect prevention checklists to avoid re occurring of preventable defects.

Client: Bank of America, Minneapolis, MN

Apr 2022 – Jan 2023

Project: GPO – Global Payment Orchestration

Role: Lead Software Engineer (SDET)

Solution Environment: Java, Python and API application in the front end, Oracle server and other interfaces in the back end.

Tools: Selenium, Cypress, Cucumber, Postman, Toad for Oracle and JIRA

Responsibilities:

- Designed and developed the front end Java, JavaScript and Groovy based application along with testing ceremonies.
- Preparing the estimation for the project and gathering required QA resources and resource planning and utilization.
- Wrote stories, planned iterations, managed backlog in JIRA for team of ten testers.
- Used Cypress with Typescript and Cucumber to develop test suites and test cases for testing functionality.
- Involved in **End-to-End** Testing and performed User Acceptance Testing for the applications.
- Performed Manual Testing of the application APIs and Functionality.
- Created Mobile test scripts using Appium, Espresso and XCUITest across iOS, Android, Web and Mac OS platforms.
- Performed Web Services and Apache REST testing using SOAP UI Pro.
- Involved in Adobe PDF testing for documents signed via DocuSign.
- Performed Integration Testing, Security Testing, Positive and Negative Testing.
- Collaborated across several teams to deliver the scripts which can be used by multiple teams.
- Preparing the Test Strategy, Test Plan and defining the clear-cut entry and exit criteria.
- Preparing and Reviewing the Business Scenarios, Functional Test scripts and Requirement traceability Matrix.
- Involved in delivery and scripting with Bamboo and Jenkins.
- Created Automation Test scripts with HTML and CSS objects for the C# and .NET application services.
- Strong knowledge on Java, JSON and Groovy to test both frontend and backend.
- Leveraged Azure DevOps and CI/CD pipeline experience to build, test and deploy changes.
- Experience in testing Informatica applications and testing of GUI, API and Database.
- Used Swagger to test and maintain the RESTful APIs.
- Used Docker to build and maintain the containers across the teams.
- Executed tests in virtual machines and reviewed test output; documented test results and defects; assisted developers with bug triage, reproduction, bug retest and fix verification
- Review the code and test cases automated by the team members.
- Making effective follow ups to gather the test data from the external vendors and arrange, clarify the business functionality knowledge for the team so that they are more comfortable to meet the deadline.
- Developing the Test Strategies, Test Plans during the entire SDLC process in Agile and defining the clear-cut entry and exit criteria.
- Preparation of Test Summary Report, lessons learnt and best practices.
- Using ALM as management and defect tracking tool.
- Carrying out Quality Assurance activities for all deliverables, so that developed software meets the standards and guidelines defined and meet requirements specified by end users.
- Managing the resources and leveraged their efforts to produce a quality outcome.
- Led weekly QA status meetings, presented overall issue status to senior management, and coordinated issue resolution and release process with the development engineering teams.
- Finally walked through the deliverable with the customer to meet the exit criteria and avail a signoff from the customer for the quality deliverable.
- Created defect prevention checklists to avoid re occurring of preventable defects.

Client: Wells Fargo, Minneapolis, MN

Apr 2020 – Mar 2022

Project: ECM&D – Enterprise Contract Management and Digitization

Role: Lead Software Engineer (SDET)

Solution Environment: Java, Python, API, AI and DocuSign application in the front end, SQL server and other interfaces in the back end.

Tools: Selenium, HP ALM 14.0, PL/SQL, JUnit, TestNG and JIRA

Responsibilities:

- Designed and developed the front end Java, JavaScript and Groovy based application along with testing ceremonies.
- Preparing the estimation for the project and gathering required QA resources and resource planning and utilization.
- Wrote stories, planned iterations, managed backlog in JIRA for team of eight testers.
- Automated GUI tests using Selenium Suite (Selenium WebDriver).
- Involved in **End-to-End** Testing and performed User Acceptance Testing for the applications.
- Used Selenium WebDriver APIs for writing JUnit and TestNG test suites and test cases for testing functionality.
- Performed Manual Testing of the application Front-End and Functionality.
- Performed Web Services testing using SOAP UI Pro.
- Involved in Adobe PDF testing for documents signed via DocuSign.
- Created Automation Test scripts with HTML and CSS objects for the C# and .NET application services.
- Performed Integration Testing, Security Testing, Positive and Negative Testing.
- Strong knowledge on Java, JSON and Groovy to test both frontend and backend.
- Leveraged Azure DevOps and CI/CD pipeline experience to build, test and deploy changes.
- Scripted and worked on SQL statements to perform verification and validation of the data.
- Worked on Java and PL/SQL languages for automating tests with Selenium.
- Designed and implemented Page Object Model concept in the automation framework.
- Collaborated across several teams to deliver the scripts which can be used by multiple teams.
- Conducted testing of GUI, API, AI, DocuSign, Mainframe, DB and ETL.
- Executed tests in virtual machines and reviewed test output; documented test results and defects; assisted developers with bug triage, reproduction, bug retest and fix verification.
- Performed Data Driven and Keyword driven Tests.
- Developing the Test Strategies, Test Plans during the entire SDLC process in Agile and defining the clear-cut entry and exit criteria.
- Preparing and Reviewing the Business Scenarios, Functional Test scripts and Requirement traceability Matrix.
- Review the code and test cases automated by the team members.
- Making effective follow ups to gather the test data from the external vendors and arrange, clarify the business functionality knowledge for the team so that they are more comfortable to meet the deadline.
- Preparation of Test Summary Report, lessons learnt and best practices.
- Carrying out Quality Assurance activities for all deliverables, so that developed software meets the standards and guidelines defined and meet requirements specified by end users.
- Managing the resources and leveraged their efforts to produce a quality outcome.
- Led weekly QA status meetings, presented overall issue status to senior management, and coordinated issue resolution and release process with the development engineering teams.
- Apart from delivering a quality application, also suggested various improvements in user perspective.
- Finally walked through the deliverable with the customer to meet the exit criteria and avail a signoff from the customer for the quality deliverable.
- Created defect prevention checklists to avoid re occurring of preventable defects.

Client: Ameriprise Financial Inc, Minneapolis, MN & Bangalore, India

Jan 2014 – Apr 2020

Project: EMMS – Enterprise Money Movement System

Role: Test Automation Lead (SDET)

Solution Environment: Java and .Net application in the front end, Mainframes, Oracle server and other interfaces.

Tools: UFT, Selenium, Appium, HP ALM 14.0, PL/SQL, JUnit, TestNG, jMeter and JIRA

Responsibilities:

- Designed and developed the front end Java and Bash/Shell scripting based applications along with testing ceremonies.
- Preparing the estimation for the project and gathering required QA resources and resource planning and utilization.
- Wrote stories, planned iterations, managed backlog in JIRA for team of five testers.
- Automated GUI tests for C#, Java and .NET based applications using Selenium Suite (Selenium IDE, Selenium RC, Selenium Web Driver and Selenium Grid).
- Involved in **End-to-End** Testing and performed User Acceptance Testing for the applications.
- Used Selenium WebDriver APIs for writing JUnit and TestNG test suites and test cases for testing functionality.
- Created Automation Test scripts for the C# and .NET application services.
- Enhanced backend interface that is used by the REST API.
- Formulated methods to perform Positive and Negative testing against requirements.
- Performed Integration Testing, Security Testing, Positive and Negative Testing.
- Strong knowledge on Java, Swift and Kotlin to test both frontend and backend applications and services.
- Scripted and worked on SQL statements to perform verification and validation of the data.
- Performed Mobile App testing across iOS and Android platforms using Espresso.
- Worked on VB Script, Java and PL/SQL languages for automating tests with UFT and Selenium.
- Designed and implemented Page Object Model concept in the automation framework.
- Collaborated across several teams to deliver the scripts which can be used by multiple teams.
- Led team of testers in upgrading and testing the regression test scripts on various platform uplift projects.
- Conducted testing of GUI, API, Mainframe and Database.
- Executed tests in virtual machines and reviewed test output; documented test results and defects; assisted developers with bug triage, reproduction, bug retest and fix verification.
- Performed Data Driven and Keyword driven Tests.
- Preparing the Test Strategy, Test Plan and defining the clear-cut entry and exit criteria.
- Preparing and Reviewing the Business Scenarios, Functional Test scripts and Requirement traceability Matrix.
- Review the code and test cases automated by the team members.
- Making effective follow ups to gather the test data from the external vendors and arrange, clarify the business functionality knowledge for the team so that they are more comfortable to meet the deadline.
- Developing the Test Strategies, Test Plans during the entire SDLC process in Agile and defining the clear-cut entry and exit criteria.
- Preparation of Test Summary Report, lessons learnt and best practices.
- Carrying out Quality Assurance activities for all deliverables, so that developed software meets the standards and guidelines defined and meet requirements specified by end users.
- Managing the resources and leveraged their efforts to produce a quality outcome.
- Mentored, trained, and coordinated activities of other members of test team. Led weekly QA status meetings, presented overall issue status to senior management, and coordinated issue resolution and release process with the development engineering teams.
- Apart from delivering a quality application, also suggested various improvements in user perspective.
- Finally walked through the deliverable with the customer to meet the exit criteria and avail a signoff from the customer for the quality deliverable.
- Created defect prevention checklists to avoid re occurring of preventable defects.

Client: J. P. Morgan & Chase: Retail, Bangalore, India

Jun 2012 – Dec 2013

Project: iPAY

Role: Test Automation Analyst

Solution Environment: C# and .Net application in the front end, Mainframes, Oracle server and other interfaces.

Tools: Quick Test Professional, HP Quality Centre 10.0, PL/SQL Developer.

Responsibilities:

- Developed Test plan, Test Scenario Design, Test cases, Test scripts from the data mapping documents, Functional Specification documents and mapped the test cases with the requirements for generating the Requirement Traceability Matrix (RTM) Requirements walk through from Clients.
- Provide estimates for testing activities and get approvals from Business.
- Creating Test Data Characteristics, Test plan, Test Approach.
- Used Quality Center for Test Execution and Management.
- Created Automation Test scripts for the C# and .NET application and Mainframes.
- Followed IQA, EQA and all the quality process which in result provide quality and timely deliverables to clients.
- Manually checked with the results from the application execution and captured the SQL statements.
- Coordinated in whole **UAT** process and involved in **UAT** documentation preparation.
- Manually verified the applications according to the requirements. Modified automation scripts as test case changes.
- Handle the tasks of managing test data, developing test scenarios and logging test results.
- Managed test data in the SQL database to test rules engines. The same database was used for UAT.
