EDUCATION

- **CUNY Hunter College** New York, NY
Bachelor of Arts in Computer Science

EXPERIENCE

- **NYSHEX** New York, NY
Lead Software Engineer, Software Engineer 2021-2023
 - **NVOCC Team Lead - Nebuchadnezzar (Java, PostgreSQL, Python, Spring):** Transitioned into a leadership role, ensuring a smooth knowledge transfer that maintained prior team's momentum. Empowered new team to achieve new heights, delivering high-visibility and critical projects. Coordinated implementation of a stopgap solution that temporarily utilized static data furthering funding goals. Directed migrations of over 75 member accounts to the NVOCC user type.
 - **Tactical R&D Backend Engineer - Endeavour:** Devised solution for enabling logistics partners to discuss and monitor container allocations from within our platform and email notifications. This solution included designing API endpoints, request and response JSON objects, PostgreSQL table schema as well as building the Java microservice that tied it all together. Implemented expansion to contracts microservice that allowed NVOCC members to access their contracts all from a single login, no longer requiring them to sign in and out of multiple accounts and increasing their productivity.
- **American Express** New York, NY
Engineer II 2019-2021
 - **Enterprise Architecture - One Data (Java, NoSQL, Groovy):** Developed tool that converted and migrated database entries without resulting in downtime for platform users. Repaired and improved pipeline that maintained resource isolation by reducing latency and allowing preemptive isolation. Tested and documented instructions for blue-green deployment feature. Coded job that provided daily updates via email of the functions deployed to each development environment.
- **Bank Of New York Mellon** Jersey City, NJ
Lead Developer, Senior Associate 2016-2019
 - **Application Platform Services (Java, AngularJS, OracleSQL):** Refactored legacy backend service, reducing REST endpoint's request payload by 90%, improving data retrieval time >10%, without scaling BXP servers, by consolidating redundant retrievals and removing antiquated data store accesses. Collaborated in design discussion across scrum teams, advising and pushing back on requests to overextend our revamped service core responsibilities. Set reasonable response time SLA for upstream services.
 - **Developer Efficiency Group:** Created Jenkins CI plugin to streamline data collection of >1000 daily builds across company's developer teams. Lead requirement gathering, and remediation of conflicting use cases from different developer teams.
- **Patientory, Inc.** Boulder, CO
Web Developer Intern (Seed Round Start-up) 2016
 - **Web Application (PHP, MySQL):** Implemented ~20 page layouts, leveraging reusable design of components, to quickly respond to evolving projections of customer usage patterns. Actively involved in product decisions.
