

Tayo A. Shittu

Houston, Texas 77002 • (773) 595-0303 • Tayoshittu2012@gmail.com

Summary

Sr. Storage Engineer with 10+ years of experience deploying SAN switches and configuring storage solutions in mission-critical environments. Trained staff, manage offshore resources, & project coordination with vendor & team. Duties include daily operations, weekend maintenance activity, zoning, volume allocation, server (Linux/Windows/VMware) provisioning, pseudo mapping, and more. Conducted ARB presentations & POC deployments for refreshes, migrations, and IAAS, PAAS, SAAS integrations. Conducted capacity planning with internal teams to manage footprint, worked with vendors for contract renewals, maintenance, EOSL replacements, and more. Provide Tier 2/3 troubleshooting to resolve data outages in SAN, cloud (AWS/Azure), & hybrid environments. Experienced with storage technologies such as EMC, NetApp, HPE, IBM, Pure, Nimble, Cisco, Brocade and more; scripting experience with Python & Powershell to enhance storage agility. Configured daily/weekly backups via Commvault, Veeam, & Azure; managed Commcell servers in regions (NAM, APAC, EMEA), and set data retention policies per requirements.

- 12+ years configuring & deploying SAN storage solutions in mission-critical environments.
- Trained & managed staff, on/offboarding, performance reviews, delegations, task assignments, and team/vendor coordination.
- Daily operations, weekend maintenance, environment health checks, bottleneck & utilization threshold monitoring, CMR task approvals & validations, san-switch zoning, lun/volume allocation, server (Linux/Windows/VMware) provisioning, pseudo name mapping and more.
- Presented Architectural Review Board (ARB) projects & POC deployments, capacity planning, asset PO revisions, contract renewals, EOSL refreshes, migrations, decommission & sanitization.
- Implemented backup solutions for NAM, APAC, EMEA regions, setting data retention policies.
- Experienced in core-edge, full-mesh, & cascade design of SAN architecture.
- Experienced in deploying switched, point-to-point, and arbitrated loop design of SAN topology.
- Migrated data using tools like Open Replicator, Hot Pull and Host based tools Open Migration/LVM mirroring, PowerPath Migration Enabler.
- Revise in zones, zonesets, alias database, vsan and configurations in Brocade & Cisco switches.
- Configured daily/weekly/monthly backups via Commvault, Veeam, & Azure; manage Commcell servers in regions, install media agents, and review Azure global backup report for jobs status.
- Implemented IAAS/PAAS/SAAS solutions for various goals of offloading compute or middleware resources to cloud, as well as full-stack management.
- Weekly CAB meetings, CMR approvals, and CMDB template design for ServiceNow platform.
- Tier 2/3 troubleshooting to resolve data outages in on-prem, hybrid, & AWS/Azure cloud environments, ensured redundancy in HA architectures, & failover/failback capabilities for DR.
- FC switch design layout, slot/port/cable management, rack/stack install and configuration.
- Auto-provisioning, FAST Cache, FastVP on VMAX 40K, 20K using SYMCLI and SMC.
- Cost-benefit analysis of AWS, Azure, GCP, IBM Blue, Sun, & VMware service providers for PAGY services.
- Deployed EC2 resizable virtual servers for utilizing S3, EBS, EFS storage services, including Glacier for long-term backup for integrated solutions such as FrameIO per business needs.
- Install multipathing & load balancing software (PowerPath, NetApp-DSM, & Veritas DMP) for systems
- End-to-end provisioning expertise with Hitachi VSP, EMC VMAX/DMX4/ 800/1000/2000/3000, VNX, Clariion CX3-80 & CX700, EMC NAS, Netapp 6240 & FAS/V3250 filers, IBM XIV, IBM SVC, IBM V7000 HP EVA 8000/P65000, HPC Traditional Cluster/Converged, 3PAR StoreServ, HP Storage Essential, EMC Control Center, IBM TPC, EFCM, and Navisphere Unisphere software.
- Datacenter cabinet deployment of PMAX, 3PAR, Powerscale, FAS8040, MDS9513, McData i10k, DCX8510.
- Configured NAS file servers & shares/exports (SMB/CIFS/NFS) for Windows & Linux environments.

Education

MAY 2015

Bachelor of Arts Technical Writing | Chicago State University | Chicago, IL

3.45 GPA • Member of university's Honor Society

Certifications

- **Dell/EMC Storage Specialist**
- **Dell/EMC Converged Infrastructure Specialist**
- **EMC Technology Foundations - CLARiiON Solutions (EMCPA)**
- **Brocade Certified Fabric Administrator 16 Gbps**
- **EMC VMAX/VMAX3 Local Replication**
- **EMC PowerStore T/X/500**
- **NetApp Certified Data Management Administrator (NCDA)**
- **XIV Storage System Technical Solutions Version 2**
- **Hitachi Data System Certification (HDS)**

Experience

10/2022 – 12/2024

Sr. Storage Operations Engineer | Abbvie | Chicago, Illinois

- Engineering, implementation, and operations of storage services for on-prem VMAX, Isilon/PowerScale, Unity, VNX & NetApp solutions.
- Executed Lake County J41 Data Center footprint expansion & EOL Brocade & Cisco SAN switch refresh to implement VxRail & VxRack hyper converged solutions.
- Collaborated with business units providing consultation and technical support for hosting CIFS, NFS, Hybrid, & Reverse-Hybrid solutions for data, dept, rd, and application support.
- Utilized Python/Powershell scripting to investigate/assist engineers with new technologies (Ansible) to automate tasks & enhance on-prem storage platforms agility.
- Implemented best practices, governance and security controls across storage infrastructure, networking, and core Internet protocols (e.g. TCP/IP, DNS, SMTP, HTTP, and distributed networks).
- Provide approvals for creation of shares/folders/AD groups/quota increases/NFS server additions & support to outsourced operations team to ensure Incident and Ticket Management via SNOW for documentation, tracking, & continuous improvement to daily operations.
- Symdev provisioning for Oracle DBs to Linux, Windows and ESX servers on Vmax PowerMax 8000 & PowerMax 8500 arrays via SYMCLI/SMC.
- Configuration of Alias, Zones, Zonesets, & enabling active cfg/vsan on Brocade & Cisco Fabric.
- Executed migration of Contact Center & Distributor Management DBs from EOL VMAX850F & VMAX950F (source) to PMAX8500 (target) via SRDF utilizing RDF groups for ACP disk copy, async mode consistency, rdg split from source/target, mirroring of IG, PG, SG, and Masking View, powerpath pseudo name config for mount points, FStab update, and volume mounting on server clusters.
- Collaborate with budget approvers on DCDR cost quote capacity requests on new/existing shares/quotas.
- Utilized TreeSize/InsightIQ for CIFS/NFS server/directory management to Deny Access privileges to clean up DFS paths & reclaim unutilized space.
- SyncIQ relocation (creating policy, break relationship, apply group to new path, & tree delete on source).
- Performed and managed data migration utilizing Komprise from NetApp HA-pair solutions & 34-node Isilon cluster (EGV001) to multiple separate PowerScale clusters (EGV006, EGV007, ABV01, etc.).
- Aggregate & vsriver configuration, provisioning volume, & lun creation on NetApp storage technologies including ONTAP, FAS, AFF, Clustered ONTAP, Storage Grid, Metrocluster & Hybrid Cloud.
- ONTAP installation & aggregate config on Netapp FAS2720, FAS8200, FAS9000, AFF-A220, AFF-A800.

- Configured MetroCluster on FAS8200 arrays in source & target datacenters via peering clusters, mirror root aggregates, creating mirrored data aggregate and executing operations.
- Deployed MetroCluster configuration between Elk Grove DC & Lake County DC configuring fiber channel network for syncmirror (NVRAM) and TCP/IP network for config replication of SVM and cluster peering.
- Executed planned DR switchover testing of MetroCluster configuration by confirming local/remote nodes are configured & normal state, run “switchover” and “operation show” commands to confirm switchover was successful, and verify DR SVMs & LIFs are online.
- Replication/DR/COOP activity utilizing SnapMirror configuration in EGV, RWC, ABV1, & IRV locations.
- On-call Cloud Engineer in IAAS, PAAS, & SAAS services on Google Cloud Platform (GCP), AWS, & Microsoft Azure configuring VMs, storage accounts, replication services, access tiers, and resource groups.
- Configured GCP/AWS policies utilizing formulas and custom images to deploy network.
- Managed 20+ migrations of on-prem applications to AWS, utilizing CloudFormation & EC2, improving system availability by 30%.
- Configured AWS CloudWatch and SNS for monitoring & alerting, reducing incident response times by 25%.
- Collaborated with dev-ops teams implementing IAM best practices, enhanced security posture and achieved compliance with industry standards.
- Assisted cross-functional team in architecture and deployment of serverless application utilizing AWS Lambda and API Gateway.
- Implemented CI/CD pipeline via AWS CodePipeline and CodeBuild, decreased deployment time, and enhanced release reliability.
- Executed a cloud cost-optimization strategy, leveraging AWS Cost Explorer to reduce monthly cloud expenditures by 20%.
- Exposed VM & cloud services in the VNet to the internet using GCP External Load Balancer.
- Utilized Traffic-Manager to redirect traffic from region to region.
- Migrated 1PB+ of data from on-prem to cloud to decommission VMs, reduce footprint & cost.
- Utilized cloud shell to write, debug scripts to automate the processes, and migration of VMs involving creation & copying of VHDS.
- Troubleshoot performance, connectivity issues for apps hosted in GCP platform.
- Utilize GCP virtual network, VPN, and express route to establish on-prem and cloud connectivity.
- Executed SSL Venafi certificate install & renewal activity for HTTPS on Powerscale clusters utilizing WinSCP and adding SmartConnect names to management network pool.
- Performed SSL renewal activity on Komprise systems via keystore/keytool file by execution.
- Troubleshoot & implement SMB solutions via best practices via ACL in active directory security groups supporting all storage hosting services and solutions.
- Collaborated with cross-functional teams to implement new storage application solutions.
- Assisted legal team to identify shares/folders, recall data, segregate visibility and apply service account to requested directories.
- Submitted quarterly Storage Privilege Access Recertification to grant rights such as admin/full control to storage admins and service accounts.
- Establishes strong partnerships with key vendors, BTO's, and teams to deploy datacenter infrastructure.
- Adhere to corporate standards regarding applicable corporate and divisional policies.
- Configure Commvault incremental & full backup operations for clients (servers), file system, backupset, & subclients with daily, weekly, or monthly storage policies.
- Executed Commvault backup & restore operations of Oracle DBs or directories performed for servers.
- Develop BCV jobs in relation to Commvault utilizing SMA console for automation via python scripting.

05/2019 – 08/2022

Sr. Storage Engineer III (Principal) | Herbalife Nutrition | Charlotte, NC

- Proposed approved Business Continuity Disaster Recovery (BCDR) ARBs for SAN Storage Array Refreshes.
- Executed VMAX-850/950 & PMAX-8000 Engine/Capacity upgrades, along with HyperMax OS upgrades from Code 5978.479.479 to 5978.711.711 across prod & non-prod sites.
- Rezone standby servers to VMAX-950F/PMAX-8000 in Brocade X6-8 Director switches following multiple HBA profile changes.
- Executed SAN-Switch Refresh from BROCADE DCX-8510-8 to Brocade X6-8 Director switches, cutover & fabric migration, and port-to-cable mapping in prod & non-prod sites.

- Storage migration from VNX8K-6610/UNITY600 to VMAX950F & PMAX8K storage arrays.
- Configuration and management of Brocade BNA Fabrics.
- Removed VMware servers zoning connected to VNX6610/UNITY9323 storage arrays from SAN Switches.
- Removed all the stale zones (Linux servers) from active zonesets in SAN switches.
- Supported teams in deployment of SAAS/PAAS/IAAS solutions.
- Create & mount NFS/SMB shares for multiple HA servers and provided read/write access to users via AD.
- Identify security vulnerabilities and remediate risks.
- Executed OneFS Upgrade for Isilon/Powerscale clusters (over 20 nodes) from Code 8.2.2.0 to 9.1.0.8.
- Configured/installed PowerPath on Linux servers for Hardware refresh/OS upgrades.
- Created SNAPVX Scripts configuring SnapGroups, generation to keep, Snap source & target, and hot backup settings to migrate non-prod instances backups from Commvault to SnapVX.
- Built & tested Clone/SnapVX schedules across DB instances.
- Created cable matrix, zoning mapping, & other enterprise documentation for switch refresh activities.
- Troubleshoot SAN-SW errors, IO & bandwidth metrics and distributed VDI servers across multiple enclosures to increase performance for IO demanding VM servers in production environment.
- Configured ESRS on Isilon/Unity clusters across multiple DCs.
- Migrated storage for all ESXi servers to Dell PowerStore 5000T, removed VNX5300 datastores from ESXi hosts, and disabled FC ports connected to VNX5300 in UCS FIs.
- Revise support contracts for assets RPO, RTO, SLA, and EOSL hardware support via Service Express.
- Migrated & decommission over 100 instances from Linux, Windows, & ESXi servers & reclaimed R1 TDEVs from reproduction & reporting BCV1, BCV2, R2 and Gold instances.
- Decommissioned EOL VMAX, VNX, & HP 3PAR nodes in multiple DC.
- Spearheaded Data Sanitization process for LUNs, VMs & physical disks in decommissioned arrays in multiple sites across US/EMEA locations.
- Manage cable disconnection from cabinets, array deallocation, & removal across US/EMEA locations.
- Review Azure/AWS tiers, retention policy, & capacity planning.
- Implemented SRDF-A on prod DBs via R1/R2, RDFG, DG & CG.
- Utilized SRM tools (CloudIQ/InsightIQ) for performance monitoring.
- Utilized Python 3.4 for Linux & OCFS volume management over SSH.
- Managed Isilon clusters in environment for weekly health checks via Python scripting & automation.
- Assisted in multi-region AWS deployment, improving application latency by 20% and ensuring HA.
- Automated routine tasks via AWS Lambda and Python scripts, increasing operational efficiency and reducing manual workload by 15 hours per week.
- Participated in the design and implementation of a disaster recovery plan using AWS S3 and Glacier, ensuring data durability and compliance.
- Provide Azure technical expertise including strategic design and architectural mentorship, assessments, POCs, etc., in support of the overall sales lifecycle and consulting engagement.
- Hands-on experience in Azure migrations, hybrid cloud and cloud native workloads including backup and disaster recovery strategies.
- Networking design and configuration for various cloud workloads including hub/spoke implementations and site-to-site connectivity.
- Extensive experience in writing automated pipelines (CI/CD) and Infrastructure as code (IaC).
- Troubleshoot performance, connectivity and other issues for the applications hosted in Azure platform.
- Performed role swap via Fortra Robot HA for replication.

07/2015 – 04/2019

Storage Engineer | MUFG Bank | Atlanta, GA

- Manage 20+ PB SAN in heterogeneous environment including EMC (VMAX, DMX and CX series) IBM FastT storage and IBM (DS series (4k, 5k & 8k)).
- SAN Administration of a complex multi-petabyte environment consisting of VMAX/DMX4, Clariion, IBM XIV and SVC storage arrays including file system configuration in AIX, Solaris and Linux servers/clusters.
- Storage volume allocation & administration across complex multi-peta byte SAN environment consists of VMAX, Netapp, VNX, 3PAR, Cisco MDS, Brocade BNA, Data Domain, & Commvault arrays including file system configurations in AIX, Unix/Linux, Windows, & VMWare servers.

- Performed HP 3PAR upgrade activities across Prod & Non-Prod environments.
- Executed firmware, drive, motherboard & SP upgrades across dozen Netapp clusters..
- Zoning & Fiber Channel switching activities on Cisco MDS & Brocade switches
- Configured block storage on HPE 3Par, VNX arrays, and file storage on Netapp Clusters.
- Configured & executed storage replication activities in synchronous/asynchronous environments.
- Supported VMWare, AIX, & Windows virtualization concepts & integrations in infrastructure.
- Executed storage migrations between platforms.
- Storage allocation to new build and existing UNIX, Windows servers/clusters and VMWare ESX environment using auto provisioning on V-max using SYMCLI/SMC. Tasks include creation of tdevs, binding tdevs to thin pools, creation of initiator/storage/port groups and creating masking view and enabling bit settings to initiators.
- Provisioning storage to UNIX, Windows and ESX servers from DMX4/DMX3 arrays using SYMCLI/SMC.
- VNX/VMAX, Cisco, RecoverPoint and VNX (Block) DMX
- Configuration and management of Cisco Fabric environment. Tasks include creation of device alias, zones, adding zones to zoneset and activating zoneset.
- Implemented thin provisioning from VMAX to UNIX (AIX, Solaris and Linux) and Windows2003/2008 (clusters) servers, and VMware ESX Servers.
- Created data devs, thin pools, tdevs, Meta volumes using SMC and Symcli.
- Configuration and management of VNX arrays using Unisphere Manager. Assigned storage to unix and windows servers and configuration of NFS exports and CIFS shares using Unisphere manager.

01/2011 – 06/2015

SAN Administrator | American Income Life | Schaumburg, IL

- SAN administration of a complex multi-petabyte storage environment consists of VMAX/DMX4, Clariion arrays, IBM SVC, XIV, V7000 arrays including file system configuration in AIX, Solaris, and Linux systems.
- Migration using Global Mirror; from Legacy SVC to SVC model 2145-DH8.
- Migration Cleanup after Migration.
- Provisioning on XIV, SVC, V7000, NAS 6250 and creating Share Drives.
- Zoning on Brocade using BNA and zone cleanup after Migration.
- Configuring back-end storage controllers Flash 900, XIV and V7000.
- Configure VSC Tools for troubleshooting Performance and Capacity issue.
- Troubleshoot issue arising from GM CG, connectivity issue between storage, fabric and hosts.
- Provided Storage Support for Production, Test, and Development systems and applications.
- Performed SAN Reclaim on already migrated luns after 30 days.
- Created LSAN Zones for Global Mirroring Migration of data from legacy SVC to NextGen SVC
- Created Mirror Copy Zones for Global Mirroring Migration of data between SVC in the same Fabric.
- Created Daily and Monthly Global Mirroring of data for two SVCs in different Fabric.
- Created Daily and Monthly Flash Copy for test servers.
- Worked with Hardware Facility Team and SA Team to resolve HBAs and Switch ports configuration.
- Storage allocation to new build and existing UNIX, Windows servers/clusters
- Connectivity of Storage with SAN Switches
- Creation of Arrays, Logical Volumes (LUN) and mapping to Hosts\Host groups
- SAN implementation and storage provisioning/ LUN allocation, zoning and LUN masking.
- Extending the Storage Space.
- Creation of LUNs from Storages and assigning them to Servers
- Taking config backup of IBM Storages and SAN Switches
- Interact with LINUX/Windows teams to support SAN requirements
- Decommissioned Window and Unix hosts when required.
- Documented procedures and processes that will help other team members to be more efficiently.
- Involved in data/host migration support for SVC attached hosts.
- Involved in Administration of Symmetrix VMAX, VNX, CLARiion, VPLEX, FAS3040, FAS3140, FAS317 arrays using SMC/SYMCLI, Unisphere and VPLEXCLI/Management Console/Unisphere respectively.
- Configured RecoverPoint CDP/CRR using Array Based Splitters.
- Implemented FAST/VP and Thin Provisioning in VMAX by creating Thin Pools and binding devices to POOLS

per EMC Best practices.

- Troubleshooting issues in the environment by working with the NetApp Customer support
- Installed Snap Manager For Exchange
- Implemented Snap Mirror Technology to Migrate Data to DR Location
- Created aggregates/volumes/qtrees in a NetApp environment
- Created Device Mirrors in VPLEX to migrate multiple LINUX Servers.
- Performed Health and Performance checks on VPLEX using Perpetual Monitors.
- Created various Monitors on VPLEX Directors to study the Performance.
- Implemented various Scripts on VPLEX for Reporting.
- Administered RecoverPoint using RecoverPoint Management Application/Unisphere and RecoverPoint CLI.
- Expanding Thin Pools with additional capacity.
- Configured RecoverPoint Disaster Recovery Remotely for mission critical Message Queuing Application.
- Conducted Knowledge Transfer Sessions on Administration, Operations and Performance of RecoverPoint.
- Replicated Oracle Databases and Application LUNs between Sites in Asynchronous mode.
- Implemented SRDF for Production by creating R1 and R2 device pairing, RDF groups and device groups.
- Experience with Prosphere/SRM tools to perform end-to-end monitoring.
- Involved in migrations using open replicator/SANCopy/PPME for array consolidations.
- Implemented Disaster Recovery Exercises to check the consistency of the replicated data.
- Performed Failed Over and Failed Back the Production from Primary to the DR Site and vice-versa to perform Maintenance at the Primary site.
- Planned and Executed the Encapsulation of LUNs from EMC DMX, VMAX, CLARiion and VNX Arrays in VPLEX.
- Performed VPLEX Data Mobility to Consolidate the Storage by Migrating Data from Symmetrix DMX to VMAX and CLARiion to VNX Arrays.
- Created Storage Pools and RAID Groups on VNX Arrays.
- Configured VNX as CIFS server and migrated CIFS Shares from Windows/NetApp to VNX using RoboCopy/EMCopy.
- Provisioned LUNs from EMC VPLEX, DMX, VMAX, CLARiion and VNX arrays to a variety of Hosts including Linux, AIX, ESX and Windows.
- Configured and troubleshoot fabric switch zoning using Cisco and Brocade Switches.

03/2008 – 11/2010

Windows System Administrator I | UPS | Hodgkins, IL

- Standardize and implement the scheduled maintenance plan documentation process.
- Administered VMware virtual machines, hypervisors and clusters with support from virtualization engineers.
- Coordinated with other teams to support network hardware such as firewalls, load balancers and switches and storage hardware such as SAN, DAS and NAS systems.
- Decreased restore time to less than 50% of prior configuration by implementing backup / restore process.
- Provided support and disaster recovery services for MSSQL failover clusters and IIS 7 web servers.
- Responsible for LAN/WAN network communications, operations, hardware and application software for intensive segment of customers.
- Monitored the LAN/WAN network environment including routers, switches, firewalls, internet access, and software applications.
- Managed, led and supported Windows XP, 7, Server 2008, VMware and Active Directory domain network in multi-locations.
- Troubleshoots problems with computer systems, including troubleshooting hardware and software.
- Configured, troubleshoot, and maintained Windows 2003 and 2008 Servers.
- Configured and upgraded Cisco Adaptive Security Appliances and firewalls.
- Provided server maintenance and installation, desktop deployment and maintenance, and end user support.
- Deployed and administered Microsoft SQL Server in standalone and clustered environments.
- Developed and implemented procedures for operational processes including upgrade, migration and maintenance.
- Performed daily backup operations, ensuring all required file systems and system data are successfully

backed up to the appropriate media.

- Performed daily duties including answering internal support calls, system health checks and event notification.
- Monitored system performance and diagnosed software/hardware problems with performance monitor and PAL.
- Managed large, complex environments with hundreds of servers across multiple datacenters on multiple continents.
- Produced, maintained, and improved documentation on various internal processes, OS standards, and refresh cycle schedules.
- Provided technical recommendations for network design, implementation, optimization and upgrade.
- Installation, configuration and maintenance of Windows servers, Cisco infrastructure, and system network components.
- Performed troubleshooting and diagnosis to hardware/software network failures, and provided resolutions.
- Participated in hardware reduction cost projects by providing server virtualization technology.
- Provided detailed updates and plans to meet project deliverables.
- Document and track issues via a ticketing system.
- Participated in 24x7x365 on-call rotation.

10/2007 – 03/2008

Desktop Support Intern | Prairie State College | Chicago Heights, IL

- Provide support for desktop computer operating systems, Google apps, and hardware/peripherals.
- Responded to requests for technical assistance in person via phone and remotely for the following technologies: Windows and Mac OS based end points (laptops, desktops & thin clients) tablets & smart phones (IOS & Android) and Microsoft Office.
- Assisted the Help Desk Manager in supervision training and mentorship of student employees at the Help Desk with a specific focus on leading the team of Desktop Support Referral student employees who also contribute to tier 2 ticket resolutions.
- Proactively resolve customer problems about equipment and services.
- Deliver just-in-time support both at the Helpdesk and across campus and respond to departmental technical emergencies in order to minimize data loss, meet deadlines, and support user needs.
- Test software images developed by Forager colleagues, evaluate software, and develop written technical instructions and documentation.
- Continually updated personal knowledge of computing hardware, operating systems, and software.
- Maintained confidentiality and discretion when working with password or sensitive materials.

Skills

Ansible • Cloud Computing • Network Operations Center • Network Configuration Management • Windows Powershell • Python Scripting Language • AWS Lambda • Microsoft Azure • IBM AIX • EMC CLARiiON • Oracle Solaris • VMware ESX/ESXi • Storage Area Network (SAN) • Brocade • Cisco • Fiber Channel • DELL EMC • Netapp • Symmetrix • SRDF • Open Replicator • SNAPVX • Local Remote Replication • HDS • Google Cloud Platform • Microsoft SQL • MPLS • Powerpath • Robocopy • VPLEX • XIV • V7000 • Global Mirror • 3PAR • CIFS NFS Hybrid • Active Directory • HyperMaxOS • Commvault • Cloudwatch • Elastic Beanstalk • AWS RDS • Storage Gateway • Amazon Route 53 • AWS ADS • AWS IAM • Azure Blob
