

Tello Rios

Staff Software Engineer

Woodland, CA • (530) 309-0275 • tellorios.dev@gmail.com

SUMMARY

Experienced Staff Software Engineer with expertise in full-stack development, microservices, cloud technologies (AWS), data integration, LLM integrations, specializing in building scalable, high-performance systems and real-time applications.

PROFESSIONAL EXPERIENCE

SALESFORCE

REMOTE

Staff Software Engineer

Mar 2018 – Feb 2025

- Worked as a **Staff full-stack developer** specializing in **Java**, **Spring Boot**, **AWS**, and modern frontend frameworks including **React**, **Angular**, collaborating in a cross-functional team to build a patient and member engagement platform within **Health Cloud**, providing **care coordination**, **patient insights**, and **personalized health journeys**.
- **Backend:**
 - Designed and developed scalable microservices using **Java**, **Spring Boot**, and **Spring Cloud**, contributing to the migration from a monolithic system to microservices, improving system resilience and reducing deployment time by 60%.
 - Integrated **FHIR/HL7 APIs** via **Spring WebFlux** and **Apache Camel**, cutting EHR data sync lag by 50%.
 - Optimized event-driven architecture with **AWS EventBridge**, **SQS**, and **Step Functions**, reducing event processing delays by 70% and improving real-time patient notifications.
- **Frontend:**
 - Worked closely with frontend engineers to build a **React/Next.js** portal for interactive patient insights and care management, integrating dynamic data visualization dashboards powered by **D3.js**, **Recharts**, and **Chart.js**.
 - Optimized performance using **React Context API** for state management, **Lazy Loading**, and **Code Splitting**, leading to a 35% improvement in page load times.
- **Database Performance & Optimization**
 - Collaborated with database administrators to optimize **Amazon RDS (PostgreSQL)** with read replicas, **DynamoDB** for high-traffic workloads, and **Redis (ElastiCache)** caching, achieving a 40% decrease in query latency.
- **AI & LLM Integration**
 - Integrated Salesforce **Einstein AI** to analyze patient data and provide personalized care recommendations, predicting health outcomes.
 - Developed AI tools such as chatbots for patient interactions and personalized care plans using **Golang** and **Python**.

SNOWFLAKE

SAN MATEO, CA

Senior Software Engineer

Aug 2012 - Feb 2018

- **Worked as a Senior Software Engineer** in a fast-paced, early-stage startup at **Snowflake**, where I built a real-time data warehousing and visualization solution from the ground up, using **AWS** and modern frameworks to deliver scalable, high-performance data storage, processing, and visualization.
- **Backend**

- Built **Java/Spring Boot** microservices for data integration and processing, using **Golang** for performance-critical tasks and enabling seamless access to large datasets through efficient data sharing.
 - Used **AWS ECS** for container orchestration and **API Gateway** to secure APIs and manage high-traffic loads, ensuring efficient data flow between services.
- **Frontend**
 - Built an intuitive **React** application focused on real-time data visualization using **WebSocket**, **Chart.js** and **D3.js**, enabling users to interact with and analyze data directly.
 - Implemented **React Query** to ensure efficient and dynamic fetching and caching of data from dynamic tenants, providing users with the most up-to-date analytics without sacrificing performance.
- **Performance Optimization**
 - Designed and developed multi-cluster virtual warehouse architecture, implementing workload-aware scaling, query scheduling policies, and resource isolation using **Java**, **C++**, and distributed systems principles.
 - Engineered cost-based query optimization, distributed execution strategies, and columnar storage pruning by leveraging **SQL** profiling and low-level performance tracing, reducing query latency.
- **Security & Authentication**
 - Integrated **OAuth2** and **JWT** for secure user authentication and authorization, ensuring robust API security.
 - Configured **Snowflake's role-based access control (RBAC)** for fine-grained access management, limiting data visibility and operations based on user roles.

GOOGLE

Software Engineer

SACRAMENTO, CA

Sep 2009 - Aug 2012

- Rebuilt and optimized the integration of Google Product Search for Best Buy using **SQL**, **C++** and **Java**, resulting in a 30% increase in product visibility and improved website traffic.
- Enhanced search algorithms through regression analysis and clustering techniques to improve result relevance, leading to a 20% increase in customer engagement and conversion rates.
- Utilized performance metrics and A/B testing to identify optimization opportunities, contributing to higher sales and a smoother shopping experience for Best Buy users.

SKILLS

Front-end Web Development: HTML, CSS, JavaScript/TypeScript, Angular, React, Redux, Next.js, Context API, Bootstrap, Material UI, Tailwind CSS, D3.js, ApexCharts.js

Front-end Mobile Development: React Native, Swift, Kotlin

Back-end Development: Java/Spring Boot, Node.js/Express/Nest.js, Python/FastAPI, Golang, C#/.NET, C/C++, SQL, NoSQL, Redis, RESTful APIs, GraphQL, gRPC, OAuth, JWT, Kafka, RabbitMQ, Prisma

Database: MongoDB, MySQL, PostgreSQL, DynamoDB

Cloud/DevOps: AWS, GCP, Azure, Terraform, Jenkins, CircleCI, GitHub Actions, Docker, Kubernetes

Testing Frameworks: Unit Testing (Jest, Enzyme), E2E Testing (Cypress, Playwright)

Architecture: Microfrontend, Monorepo, Atomic Design, Event-driven

Programming Languages: JavaScript, Java, Python, Golang, C#, PHP, SQL, C/C++

Other: Mapbox GL, Google Maps API, WebRTC, Swagger, Formik, Webpack, Agile, RESTful API, SEO, Figma, Sketch, A/B Testing, Stripe, React Query, Apollo, DataDog, PagerDuty, Google Analytics, Git, GitHub, GitLab, Bitbucket, Jira

EDUCATION

UNIVERSITY OF CALIFORNIA

Bachelor of Computer Science

BERKELEY, CA

2005 - 2009
