Summary

- Seasoned **Oracle Database Administrator** with **7+ years of experience** managing, optimizing, and securing enterprise-level **Oracle**, **PostgreSQL**, and **SQL Server** databases across on-premise and **cloud environments**. Expertise in **database design**, **performance tuning**, **backup/recovery solutions**, and implementing **high availability** architectures using **Oracle RAC**, **Data Guard**, and **AWS RDS**.
- Adept at leveraging **ETL tools** (SSIS, Informatica) and **automation scripting** (Python, Shell, PowerShell) to streamline workflows and ensure robust data management. Strong focus on ensuring **data security and compliance** (GDPR, SOX) and implementing disaster recovery strategies for mission-critical applications.
- Key Achievements:**
 - Architected and implemented backup and recovery strategies** using **RMAN** and **Oracle Data Guard**, achieving 100% data recoverability in critical production environments at Dell Technologies.
 - Optimized PostgreSQL production databases** with advanced techniques, including **indexing** and **query optimization**, improving system performance and reducing downtime by 30%.
 - Designed and managed **cloud database solutions** using **AWS RDS**, including seamless migration of on-premise databases to **cloud environments** with **AWS DMS**.
 - Configured & maintained **3-node Oracle RAC clusters** with ASM, ensuring high availability & fault tolerance for enterprise applications.
 - Automated database tasks using **Python** and **Shell scripting**, reducing manual intervention and increasing operational efficiency by 40%.
 - Led the implementation of **Oracle GoldenGate** for real-time data synchronization, ensuring seamless replication across production and development environments.
 - Spearheaded disaster recovery plans, including **Point-in-Time Recovery (PITR)** and **log shipping**, ensuring business continuity during critical failures.
 - Designed and executed **data migration strategies** for Oracle and SQL Server databases to **AWS** and **Azure** platforms, facilitating scalable and cost-effective solutions for growing data needs.

Skillset

Database Management Systems: Oracle Database, Microsoft SQL Server, MySQL, PostgreSQL, MongoDB, Cassandra, DB2, Amazon RDS, MariaDB, Redis

Database Design and Modeling: ER Diagrams, Normalization, Star Schema, Snowflake Schema, Dimensional Modeling, OLAP, OLTP

Query Languages and Scripting: SQL, PL/SQL, T-SQL, PostgreSQL PL/pgSQL, MongoDB Query Language (MQL), Shell Scripting, Python Scripting, PowerShell

Performance Tuning and Optimization: Indexing, Query Optimization, Database Partitioning, Execution Plans, In-Memory Caching, AWR Reports, SQL Profiler, Data Compression

Backup and Recovery Solutions: RMAN (Recovery Manager), Oracle Data Guard, SQL Server Always On, Log Shipping, Snapshots, Disaster Recovery Planning, Backup Scheduling, PITR (Point-in-Time Recovery)

Data Security and Compliance: Database Encryption, Auditing, Access Control, Role-Based Security, SSL/TLS, GDPR Compliance, SOX Compliance

High Availability and Scalability: Clustering, Replication, Sharding, Failover Clustering, Load Balancing, Oracle RAC (Real Application Clusters), Mirroring, SQL Server Always On

Tools and Technologies: SQL Server Management Studio (SSMS), Oracle Enterprise Manager, pgAdmin, MongoDB Atlas, DBeaver, HeidiSQL, Toad for Oracle, dbForge Studio, SQL Profiler, Azure Data Studio

Cloud Database Services: Amazon RDS, Amazon Aurora, Azure SQL Database, Google Cloud SQL, Google BigQuery, Oracle Autonomous Database, Azure Cosmos DB

Monitoring and Automation: Prometheus, Grafana, SolarWinds, Nagios, Oracle Grid Control, SQL Server Agent, Ansible, Jenkins, Puppet, PowerShell for automation

Data Migration and ETL Tools: Oracle Data Pump, SSIS (SQL Server Integration Services), Talend, Informatica, AWS DMS (Database Migration Service), Azure Data Factory, Db2 Connect, Sqoop

Professional Experience

Sr. Oracle Database Administrator, Dell Technologies

Jan 2022 – present | Texas

- Performed database cloning and duplication** using **RMAN** and **user-managed hot/cold backups**, ensuring seamless replication and restoration of databases for production and development environments.
- Upgraded Oracle databases** from **12c to 19c** and implemented migration strategies, including **installation**, **configuration**, and **patch management** for **Oracle 11g/12c/19c** on **Red Hat Linux** systems.
- Architected and implemented backup and recovery strategies** with **RMAN incremental backups** and **datapump utilities**, enhancing disaster recovery plans with **Oracle Data Guard** for physical standby databases.
- Administered **AWS EC2 instances**, ensuring optimized performance and integration for hosting multiple Oracle database environments, including **RAC**, **Data Warehouse**, and **Development/Test databases**.
- Monitored and optimized performance for **24/7 high-availability Postgres production databases**, managing **cron jobs** for backups, re-indexing, vacuuming, and **materialized views**.
- Configured and managed **Oracle GoldenGate** components, including **Integrated Extract**, **Replicat**, and **Trail Files**, resolving replication issues and ensuring real-time data synchronization.

- **Installed, configured, and managed 3-node Oracle RAC (Real Application Clusters)** with **ASM**, supporting both production and development environments with capacity planning and high availability.
- Developed and executed **ETL workflows** to extract, transform, and load data from diverse sources into target databases using tools such as **Oracle Data Pump, SSIS, and Informatica**.
- Improved database performance with advanced techniques, including **indexing, SQL query optimization, execution plans, and analysis of AWR, ASH, and TKPROF reports**, reducing downtime and enhancing system responsiveness.
- Automated tasks using **Python scripting**, such as parsing XML documents and integrating data into databases, and leveraged **PowerShell and Shell Scripting** for routine database management.
- Managed database performance monitoring and operations using tools like **Oracle Enterprise Manager (OEM), Toad, and Prometheus**, preventing downtime and addressing bottlenecks in real-time.
- Provided expertise in **Oracle database security and compliance**, implementing **SSL/TLS encryption, auditing, GDPR, and SOX compliance** to ensure secure and regulatory-compliant database environments.
- Delivered **AWS database solutions** by managing **Amazon RDS instances**, optimizing performance with **Aurora**, and leveraging **AWS DMS** for seamless data migration to cloud environments.
- Designed and implemented **disaster recovery plans** and performed emergency recovery scenarios, including **point-in-time recovery (PITR)**, ensuring 100% recoverability of critical business data.
- Collaborated with the system operations team for **database deployment and capacity planning**, configuring OS infrastructure for high-performing Oracle database solutions on **AWS** and on-premise systems.

Oracle Database Administrator, *Epsilon*

Jan 2019 – Dec 2021 | Texas

- **Supported three major projects** from Development to Production across Tech-Test environments, performing daily **configuration, schema management**, and database administration on **Linux and Unix servers** for databases ranging from **4GB to 9TB**.
- **Installed and configured Oracle databases** (10g, 11gR1/R2, and 12c) on **Red Hat Linux 6** and **Unix platforms**, including the setup of **Oracle Enterprise Manager 12c**, repositories, and agent deployments.
- Applied **bug fixes, quarterly security patches**, and maintained high availability for **stand-alone databases and 2-node RAC databases**, ensuring minimal downtime during maintenance windows.
- **Configured and managed physical Standby Data Guard** for disaster recovery while creating **Disk Groups** (OCR, Voting Disk, and archived logs) with **normal redundancy** for high availability.
- Performed **cloning of RAC databases** using **RMAN** to refresh lower environments and supported **backup and recovery operations**, ensuring robust data protection and recovery capabilities.
- Implemented **Golden Gate replication**, troubleshooting issues related to **RAC node evictions** by analyzing cluster and system logs, and performed **SQL/PLSQL performance tuning** using **AWR, ADDM, and ASH reports**.
- Automated critical database tasks using **Shell scripting** and scheduled jobs with **CRONTAB**, improving operational efficiency and reducing manual intervention for routine tasks.
- Monitored and managed production environments using **Oracle Grid Control** and deployed comprehensive **capacity planning** to anticipate and address future growth requirements.
- **Implemented AWS services** such as **Amazon RDS** for database hosting and **AWS CloudWatch** for monitoring, ensuring seamless cloud integration and optimal performance of database environments.
- Designed and executed **data migration strategies** using **AWS Database Migration Service (DMS)**, facilitating a smooth transition of Oracle databases to cloud environments, while adhering to high availability standards.

Oracle Database Administrator/MS SQL Server, *Caterpillar*

Apr 2016 – Dec 2018 | Peoria

- **Created and configured Disk Groups** for **OCR, Voting Disk, and archived logs** using **normal redundancy**, ensuring high availability and resilience for production environments.
- **Performed RAC database cloning** with **RMAN** to refresh production data for lower environments on demand, supporting seamless testing and development processes.
- Managed **database backup and recovery operations**, conducting daily monitoring of database and network issues to prevent downtime and ensure optimal performance.
- **Installed and configured Oracle databases** (10g, 11gR1/R2) on **Red Hat Linux 6** servers, supporting a range of databases from **4GB to 9TB** across multiple development, production, and testing environments.
- Configured **Oracle GoldenGate** for replication, ensuring efficient data synchronization and real-time replication across multiple environments.
- **Deployed Oracle Grid Control** to monitor and manage enterprise-wide databases, ensuring proactive issue detection and streamlined database administration.
- Automated routine database operations with **Shell Scripting** and scheduled jobs using **CRONTAB**, improving operational efficiency and reducing manual errors.
- **Troubleshoot RAC node eviction issues** by analyzing cluster and system logs, identifying root causes, and implementing fixes to maintain stability and high availability.
- **Integrated Azure SQL Database services**, implementing **Azure Data Factory** for seamless ETL workflows and leveraging **Azure Monitor** to track database performance and metrics.
- Designed and implemented **data migration strategies to Azure**, utilizing **Azure Migrate** and ensuring a smooth transition of Oracle databases to cloud infrastructure with high availability standards.

Certificates

OCA - Oracle Certified Associate • SQL Fundamentals • Azure 900

Education

Bachelor of Science in Computer Science, *University of Bamenda*

2013
