🎓 EDUCATION

Degree

San Diego Community College District-CCNA Cisco Academy

📅 Nov, 2003

Degree

Newton High School, Queens

📅 June, 1997

📍 New York

Bachelor of Science
Information System

New York City College

📅 May, 2001

📍 New York

Certifications

Computer Career Center (CCC)

📅 Jan, 1998 - Apr, 2000

★ SKILLS

📅 CAREER OBJECTIVE

Experienced and adaptable Migration Solution Architect with over 25 years of expertise in managing complex migrations and project-based engagements. Recognized for strong team loyalty, real-time problem-solving, and the ability to navigate dynamic work environments. Skilled in leading cross-functional collaboration between internal technical teams and customer stakeholders to ensure seamless migration experiences. Adept at handling shifting timelines and unexpected challenges without compromising delivery quality. Focused on driving value through meticulous planning, on-time execution, and a commitment to exceeding customer expectations in every engagement.

👤 WORK EXPERIENCE

Sr. Storage Migration Solution Architect

Pure Storage

- 📅 3/2020 - Present 📍 Remote New York, NY " Raleigh, North Carolina
- Lead complex data migrations from third-party storage arrays to Pure FlashArray and FlashBlade platforms, ensuring minimal disruption and maximum performance.
 - Partner with pre-sales and account teams to analyze customer environments, contributing to the successful closure of multi-million-dollar opportunities through tailored data mobility strategies.
 - Drive enterprise-scale healthcare projects with a focus on EPIC application data migrations, providing specialized architecture, governance, and risk mitigation throughout the project lifecycle.
 - Utilize advanced migration tools including Komprise, Robocopy, DataDobi, and Parsec for large-scale file migrations, and Double Take, Storage-Vmotion, LVM, P-Move, PPME, Cirrus DMS and Cirrus CMC for block-level and Boot-From-SAN migrations.
 - Serve as a trusted technical advisor to customers, aligning migration solutions with strategic business goals while delivering hands-on implementation, documentation, and post-migration optimization.
 - Lead discovery workshops, architecture planning, and SOW development, contributing to RFP/RFI success and long-term customer satisfaction.
 - Mentor internal teams and partners, sharing best practices across diverse migration domains such as NFS/SMB, block storage, Brocade & Cisco Fabric migrations, application-based, and hybrid cloud environments.
 - Conduct in-depth risk assessments and data analyses during technical discovery phases, shaping customized migration plans with proactive risk mitigation strategies.
 - Create and maintain comprehensive technical documentation, including migration runbooks/workbook, architecture diagrams, and engineering artifacts to ensure clarity and repeatability across projects.
 - Champion a culture of continuous improvement by contributing lessons learned, post-mortem insights, and process optimizations to drive service excellence and innovation within the Data Mobility team.
 - Created Ansible playbooks to configure hosts and push storage multipath and filesystem settings to Linux/UNIX clients during multi-host migration scenarios.
 - Integrated Cirrus CMC API workflows into Python-based automation tools to schedule and monitor block-level migration events.

- Network Engineer / Software, Hardware & Networking troubleshooting specialist, Migration Engineer, Migration Architect, Switch Fabric Architect Brocade & Cisco, Purity Migrate, Boot from SAN Migration, Cirrus CMC/Cirrus DMS Automation, Pure Storage Python SDK.
- Active – Active / Active Passive Cluster Migrations

CERTIFICATIONS

- A+ Certified Service Technician - May, 1999
- Microsoft Certified Professional- (MCP) - Oct, 1999
- 3Com NPP-Sep, 1999
- Microsoft Certified System Engineer-(MCSE) - Aug, 2000
- (MCP2000)-Sep, 2001
- Dell Hardware Certified - May, 2001
- Cisco Certified Network Associate (CCNA) - Oct 2005
- EMC Clariion Solutions Expert (EMCIEe) - Feb, 2006
- Vmware (VCP3) - July, 2007
- Vmware (VCP3-CP) - August, 2007
- NetApp (NCDA) - Sept, 2008
- Brocade (BCFP) - July 2009
- Brocade (BCFD) - Feb, 2010
- Brocade (BCNE) - June, 2010
- Brocade (BCLE) - Sept, 2010
- Brocade (BCFCoEP) - May, 2011
- Brocade (BCEFE) - Aug, 2012
- AWS Certified Solutions Architect – Associate – Oct, 2020
- AWS Certified Solutions Architect – Professional - Nov, 2020
- Cirrus DMS Certified Professional_Leve2 - Feb, 2021
- Komprise Technical Professional - May, 2020
- DataDobi Professional 5 - Jun, 2020
- Pure Storage Certified Architect Professional Flash Array - July 2022

Sr. Storage Architect

CDILLC

5/2019 - 3/2020

Remote New York, NY " Raleigh, North Carolina

- Architect and deploy complex storage and data protection solutions consisting of multiple technologies such as Dell/EMC Avamar, Pure Storage, ESXi 6x, RHEL 5x, RHEL 6x and Cirrus Data Migration (DMS).
- Managing and overseeing multiple large-scale projects such as MetLife and IBM.
- Ensuring team members understand the project solution/architecture, customer requirements, and success criteria.
- Managing separate project initiatives from the same client as one holistic project (scheduling, conflicts, interoperability of technology, dependencies, etc.)
- Assisting in day to day management of storage and backup engineers.
- Driving the execution of Customer-facing projects to conclusion with attention to quality, timeline, and budget.
- Designed and deployed automation scripts using Ansible to streamline provisioning of NFS/SMB shares across Pure Storage and Dell EMC platforms.
- Working with appropriate vendors to ensure team certifications are up to date and relevant.
- Serve as delivery systems Architect expert while working closely with R&D team members and internal cross functional teams with Server hardware & Dell/EMC, Cohesity, Brocade hardware.

Sr. Site Reliability Engineer (SRE)

Cohesity

7/2018 - 5/2019

Raleigh, North Carolina

- Extensive troubleshooting across various O/S platform (RHEL, ESXi 6.7, AIX, Windows) on a Hyper-Converged Secondary Storage solution.
- Providing migration solution from AHV, Pure Storage, OneFS and NetApp (Mode 7 & CDOT) to NFS mount on a Hyper-Converged Secondary Storage solution.
- Responsible of performing Linux debugging , with an emphasis on systemtap, tcpdump ftrace, strace, Wireshark, gdb, and (core dumps).
- Performed archive/replication solution site to site as well as AWS S3 and Glacier.
- Performed On-Premise migration solution with AWS SnowBall to AWS S3 and Glacier.
- Task with being a tech writer for Cohesity to build and grow our internal knowledge base from 165 KB's to 1,500 KB's
- Built automation tooling in Python to orchestrate data movement between on-premise storage and AWS S3/Glacier using the AWS SDK (boto3)

Sr. Principal Engineer (Storage Architect)

SimpliVity – HPE " TekSystems

9/2017 - 7/2018

Raleigh, North Carolina

- Drove the design and execution of a HCI solution that delivers a differentiated customer experience enabling Dell, Lenovo, Cisco UCS an HPE hardware to be the best choice for software defined storage (SDS) solutions powered by SimpliVity 380 Gen9, Gen10 (AHV/Hyper-V/ VMware)

- Pure Storage Flash Blade Architect Associate - Aug 2022
- Pure Storage Certified Architect Professional Flash Blade - Sept 2022
- Pure Storage Migration Specialist - Nov 2023
- Pure Storage Certified Platform Architect Expert - Nov 2024
- Pure Storage Certified Cloud Block Store – Nov 2024
- Pure Storage Certified Data Storage Associate - Jan 2023
- VMware Certified Professional VCP 8 - April 2024
- Cirrus Migrate Cloud Professional - March 2025
- Google Associate Cloud Engineer - March 2021
- Google Professional Cloud Architect - April 2023

- Architected the engineering solution of data protection integration with software defined hyper-converged solution (Avamar and Data Domain) in ESXi 5.5, 6.5 and Hyper-V environment.
- Developed and delivered Dell SDS based converged backup appliance (SimpliVity 380) reference architectures OMNI-Cube.
- Subject matter expert in EMC/Dell storage solutions using PowerEdge server with software defined private cloud/ hyper-converged storage such as 3Par, Nimble and SimpliVity VxRail and VSAN
- Planning disaster recovery solutions to existing hyper-converged use cases – VM vending, VDI, and Enterprise ROBO/LOB.

Sr. Storage Engineer

Fujitsu America, Inc. (Volt)

06/2016 - 9/2017

Raleigh, North Carolina

- Develop and maintain standards and procedures for storage systems and large OS and servers across a complex computing infrastructure.
- Performing cross storage migration projects like XIV to VNX and VMAX along with experience with SRDF, Open replicator for replication purpose between two or three sites.
- Managed Blue Cross & Blue Shield VMware virtual Desktop infrastructure created user profiles along with creating writable volumes.
- Design and architected BNA multiple Brocade edge and core switches after designing and planning successful fabric migration from Cisco MDS in the Blue Cross & Blue Shield Datacenter.
- Review current hardware, software, product, test/certification, performance measurements, and configuration/management to ensure high quality of service for performance, availability, security and administration.
- Managing SAN storage Data Domain, EMC VMAX, VNX using EMC Unisphere.
- Implementation of Horizon 7 integrated with VMware's Software-Defined Data Center, which includes vSphere, vSAN and NSX along with data migration.

Technical Storage Solution Engineer IV

Hewlett Packard (HP)

07/2013 - 06/2016

Queens, New York

- New position as storage solution engineer supporting HP EVA's and 3PAR technologies.
- Full System Life Cycle including installation and configuration, patching, upgrading, performance monitoring, troubleshooting, and capacity planning of 3Par/HP EVA systems.
- Maintain and administer FC SAN storage and associated upgrades/expansions.
- Architect and lead implementation of various IT infrastructure initiatives off-hours and

Service Delivery Consultant – Advanced /Architect

Brocade Communications Systems, Incorporated

10/2010 - 07/2013

Queens, New York

- Responsible for projects spanning multiple technologies: Brocade FAN, SAN, FICON, Channel Extension, and DCFM solutions; FCIP and SAN solutions, Microsoft Solutions, EMC Storage Solutions, VMware Solutions
- Developed fabric migration plans to support interop and zoning database migration from Mcddata director class switches to Brocade DCX Backbone for USARPAC G2 DEPUTY CHIEF STAFF
- Responsible for performing fabric migrations from legacy Mcddata fabric's, Cisco MDS fabrics to new Brocade DCX core environment.
- Design and architect campus wide and state wide Brocade DCX infrastructure with dual FCIP links.
- Pursue technical training paths and industry certification in order to enhance delivery capabilities and resource marketability
- Designed a multitude solutions ranging from enterprise class fabric switch solutions on DCX backbone to small business solutions utilizing 7500 & 7800 edge switches examples include: Layout design to deploy 7500e's between two sites to replace existing M1620 extension network for a major Telecommunications company
- Several SAN designs and assessments involving, FC Routing, FCIP, LSAN Zoning and ISL Trunking or various small and medium sized businesses
- ISL Oversubscription layout designed for a high-performance fabric deployment for HBO

Service Delivery Consultant – Advanced /Architect

Strategic Business Systems – EMC/Dell Partner

 07/2004 - 10/2010

 Union, New Jersey

- Knowledgeable on Fibre and IP Network topologies, protocols, network components, cabling, network operating systems, directories, security, installation, data backup and MS cluster migrations
- Have experience implementing and architecting disaster recovery plans in addition to the configuration of tape libraries where the customer was archiving from Data Domain to tape
- Involved with complex data migration in mix storage environment for commercial and DoD sites
- Manage recruiting efforts and technical screening processes to ensure ideal candidates are provided for various business unites
- Serve as point of technical escalation to ensure highest level of customer satisfaction in project delivery
- Created NAS, CLARiiON, Symmetrix and Compellent Design Workbooks and other site architecture documentation for implementation engineers
- Possess Host to SAN configuration knowledge on all Windows platforms and VMware/ including; Host Bus Adapter configurations, file creation\modification, file structures, input/output controls, and shells
- Administrative level knowledge of layered software components of EMC Storage Attached Networks, Content Addressed Storage, and Network Attached Storage equipment, including local and remote replication methods and best practices
- Experienced with testing, trouble shooting, failure analysis, and root cause analysis of server & storage solutions, primarily FluidFS NAS, Compellent Storage Center, including hardware, software, network and environmental components.

- Manage 100 TB across a primary and failover site for a major federal customer. The environment consisted of four HP EVA Storage Array's, two 3PAR array's, two CLARiiONs, two Celerras, 8 Brocade 12000 Silkworms, 150 Windows

Dell Engineer Team Technical Lead

Infrastructure Development Corp/Dell

 10/2003 - 02/2004  Queens, New York

- Responsible for the implementation and configuration of servers, windows 2000 and windows 2003 OS, Active Directory, Exchange Clusters, DNS Server configuration
- Managing the Storage Area Network systems including SAN devices and Fiber Channel switches
- Directing and supervising staff for multiple data center configurations and implementations

Network System Engineer

Armtec Defense Products

 03/2003 - 10/2003  Palm Springs, CA

- Built and design (DoD) networks to meet (DoD) Operational guidelines and heavy network security policies
- Responsible for 800 users LAN and connections to a 2700 plus user WAN.
- Maintaining, upgrading and installing of network servers running varying operating systems from Windows NT 4.0 to Windows 2000 (Active Directory) and Sun O/S
- Document development including: SSAA (System Security Authorization Agreements) and SECONOPS (Security Concept of Operations) -S&E (Security Testing & Evaluation) -Residual Risk Assessments -RTM (Requirements Traceability Matrix) -SFUG (Security Features User's Guide) -TFM (Trusted Facility Manual) -CONOPS (Concept of Operations) -Associated Appendices

W2K Network System Administrator- (Transition Support Team)

PEC Solution Inc./N.M.C.I Strike Force Project

 06/2002 - 02/2003

- Maintained Novadigm Radia servers as well as Microsoft ISA servers and print servers with over 2000 printers including Exchange email servers with over 50,000 mailboxes
- Operation and sustainment of: WINS servers as well as File Clusters, Veritas NetBackup servers, and Dell Powervault and Data Domain SANs.
- Performed monitoring and remote administration of over 400 Dell servers enterprise wide
- Troubleshoot varying issues from lost Internet connectivity enterprise wide to downed cluster servers
- Installed and configured Tivoli Firewall Toolkit solution to allow effective and efficient management of servers located behind internal corporate firewalls

- Customized and streamlined Tivoli Endpoint installation procedure (11,000 Endpoints), added reporting functionality to meet customer's needs and requests

Network System Analyst

American System Corporation/SPAWAR

 03/2002 - 05/2002  San Diego, Downtown

- Document development including: -SSAA (System Security Authorization Agreements) and SECONOPS (Security Concept of Operations) -S&E (Security Testing & Evaluation) and Residual Risk Assessments -RTM (Requirements Traceability Matrix) and SFUG (Security Features User's Guide) -RFM (Trusted Facility Manual) and CONOPS (Concept of Operations), Associated Appendices
- Testing DoD Windows 2000 and Unix Networks IAW with Defense Information Systems Agency (DISA) Field Security Operations guidelines to include: -System Access Controls and Data Access - Identification and Authentication, Configuration Management - Architecture Security and Security Testing -Personnel Security, Procedural Security, Physical Security, and Administrative Security - Scanned DoD Network with System Scanning Tools and documented software vulnerabilities

W2K Network System Administrator

System Integration & Research, Inc./N.M.C.I Strike Force Project

 03/2001 - 11/2001  San Diego, North Island/Navel Air Base

- Engage in and integral role of standing up the San Diego NOC under a Windows 2000 infrastructure that would support several server farms in the west coast region for the Navy&Marine Corp
- Installed and configured Domain Controllers, Clustered Servers, and Dell SANs equipment that would ultimately service 720,000 Navy and Marine Corps users which will proved

Network Solution Engineer/Project Analyst

Computech International

 04/2000 - 11/2000  Great Neck, New York

- Performed extensive hand on assembly of customized IBM workstation (6868-92U & Z Pro) as well as Compaq (AP200 & AP400) for digital editing (Matrox G-400 dual-head, Reeltime, DV-500, DV-1000) caption cards
- Provided on-site technical an LAN support for CTI as well as network security using Checkpoint and Cisco VPN software for their remote offices located in Florida, Colorado, and San Jose area
- Lead project manager in the cutting edge 3M Volition Fiber optic gb switches running multiple benchmarks testing
- Beta testing IBM & Seagates new 15,000 rpm drives with Mylex and Chapprael controllers for SAN an NAS uses

Senior Technician/LAN-Manager

Power Group

 11/1999 - 04/2000  Jamaica, New York

- Installation and Configuration of NT 4.0, Novell 5.1 Servers for up to 50-500 nodes
- Performing on-site Lan Administration for multiple site's
- Analyzing & Sniffing out multiple networks for higher performance, over Cat-5 & Fiber Optic
- Performing Migration from Novell to NT as well as from NT to Windows 2000 Advanced server

Computer Technician/ LAN-WAN Administrator

Jerry's Computer Services

 04/1997 - 11/1999

 Valley Stream, New York

- Configured a variety of Compaq, IBM, Dell and Gateway systems for Network connectivity using Windows 9x, Windows NT Workstation, UNIX and OS/2
- Performed Administrative functions on Windows NT servers that consisted of Adding Users, Modifying user access to server resources, Defining TCP/IP Printers, HP Jet Direct Printers and print queues
- Extensive hands on experience with installing and troubleshooting of modems, hard drives, video cards, motherboards, memory, cd roms, floppies (LS 100's), Zip drives, Jazz drives, SCSI adapters, CD readers, writers and re-writers
- Configured, Installed and Maintained Hubs, switches, and Rack Mountable modems

Software Technician (GS-5)

Immigration and Naturalization Service

 04/1996 - 02/1997

 Garden City, New York

- Installed and configured Rayfax and Btrieve filing system software
- Installed and configured centralized copy of contact management software that was accessible by all nodes connected to the LAN
- Installed and configured Windows 9x, Windows NT Workstation, Window NT Server operating systems as well as TCP/IP design and troubleshooting
- Installed and configured Microsoft Office 97 and WordPerfect v5.0 and proved training
- Hardware End to End Solutions Compaq rack mountable servers IBM Nefinity and IBM Intellastations. Synoptics, Bay Networks switches & hubs, 3Com hubs, Volition 4000 giga bit switches, Motorola, Ascend, 3Com and Paradyne modems, Linksys DSL routers, and Sysconnect giga bit network cards. Brocade, McData fabric switch product line, and Cisco MDS switches Dell Equallogic systems, Dell 2950, 6950, 2850, 1855 and 1955, Dell Power App cache, Dell SAN P51F/P56 Fibre switches.
