

## SUMMARY:

Tito Cumpen

Security Architect

Lake Elsinore, CA 92530

Contact: 949-275-4429

tito@xsvoce.com

A visionary Cloud Security Architect with extensive expertise in cloud-native software development, security, and compliance frameworks such as HIPAA, HITRUST, and SOC2. Proven in implementing and managing DLP tools and configuring data protection policies in corporate environments. Demonstrates strong scripting and programming skills (e.g., Python, Java, Bash) to automate data protection operations and enhance tool integrations, as well as a proven ability to integrate security tools using RESTful APIs.

## SKILLS:

- |                        |                      |                       |
|------------------------|----------------------|-----------------------|
| • MS Azure             | • NOSQL              | • SIP                 |
| • AWS                  | • Python             | • MAVEN               |
| • IaC                  | • GCP                | • Web Sockets         |
| • CI/CD                | • Linux              | • SQL                 |
| • Java                 | • Kubernetes         | • IBM BLUEMIX         |
| • REST                 | • Docker             | • Node JS             |
| • SaaS                 | • Packet             | • JSR289              |
| • Cloud Architecture • | Analysis/Wireshark • | • PHP                 |
| Cloud Security         | CISCO CLI            | • Cross collaboration |
| • Agile Development    | • WebRTC             | • ACME Packets SBC    |

## WORK EXPERIENCE:

**Medocity Inc. – Parsipanny, New Jersey (Remote)**

**Cloud Security Director** | Oct 2013 – Present

### **Cloud Security Architect / Engineer**

- **Cloud Security Initiatives:**
  - Spearheaded initiatives by implementing cutting-edge DLP systems to enhance data protection and threat detection.
  - Created Automated Scanning Cadences Utilizing Prowler for auditing and Qualys WAS for Web Application vulnerability scanning
  - Designed and implemented *Detection as Code (DasC)* by creating a CI/CD pipeline that automated the deployment of security detections to endpoints and SaaS environments—reducing manual overhead and improving consistency in endpoint protection.
- **Vulnerability & Policy Management:**
  - Integrated OWASP ZAP into our CI/CD pipeline to proactively test API endpoints for vulnerabilities during the development cycle, significantly improving application security.
  - Managed cloud security policies to mitigate misconfiguration-based vulnerabilities and ensure robust data protection. Developed update cadences within Intune, and Azure update manager to mitigate host-level vulnerabilities.

- **Data Leak Prevention:**
  - Set up Microsoft Cloud Application Security (MCAS) to detect and prevent data leaks from cloud applications by identifying sensitive information exposed in content or metadata.
  - Leveraged Google Workspace Admin API and Microsoft Purview (formerly Microsoft Data Loss Prevention) to classify and label sensitive documents across email, cloud storage, and collaboration platforms, reducing the risk of accidental exposure or unauthorized access.
- **Compliance & Updates:**
  - Authored compliance procedures (e.g., HIPAA, SOC2), aligning organizational policies with regulatory requirements.
  - Implemented update cadences and managed mitigations to address security vulnerabilities proactively.
  - Enforced application control via Defender XDR, implementing endpoint security measures to block unauthorized access. Worked with internal auditing tools for asset discovery. Triaged vulnerability remediation reported from internal findings and external audits.

### Key Security Tools Utilized:

- **Detection as Code (DasC):**
    - Designed CI/CD pipelines for automated deployment of security detections.
    - Streamlined the deployment of updated detection logic, reducing detection time by 30% through automated rule updates and continuous monitoring.
  - **OWASP ZAP:**
    - Integrated into CI/CD pipelines to identify vulnerabilities in API endpoints during development, thereby improving application security posture.
  - **Microsoft Cloud Application Security (MCAS):**
    - Configured MCAS to detect and prevent data leaks by identifying sensitive information in content or metadata. Created alert rules triggered by endpoint detections and level anomalies.
  - **Google Workspace & Microsoft Purview:**
    - Implemented policies to classify and label sensitive documents, ensuring proper handling across email, cloud storage, and collaboration platforms.
- 

## Lead Software Engineer / Architect

- **Platform Development & Client Support:**
  - Assisted in the development of iOS, Web, and Android clients while serving as the core developer of the server-side infrastructure using OpenSIPS and Java SIP Servlets.
- **Infrastructure Automation & Containerization:**
  - **Terraform Deployments:**
    - Utilized Terraform to deploy staging environments for our SaaS application, ensuring robust infrastructure for critical video services and associated APIs.
  - **Kubernetes Clusters:**
    - Deployed and managed Kubernetes clusters using AKS, supporting the containerized workloads essential for the application's scalability and reliability.
- **Automation & Collaboration:**
  - Automated the back-end service container build process and App Service Deployment utilizing Azure DevOps (CI/CD).
  - Collaborated with NodeJS back-end developers to design and implement API interfaces for key conferencing features, including call detail records (CDR), authentication, video file encryption, sentiment analysis, and speech-to-text functionality.
- **Microservices & API Development:**
  - Designed and implemented event-driven, containerized applications & microservices using AKS, ACI, AMQP, and databases (MongoDB/SQL).

- Developed back-end REST API interfaces/endpoints for conferencing requests, recording, encryption, and speech-to-text.
- 

## **Cloud Operations Manager**

- **Operational Improvements:**
  - Streamlined cloud operations to improve system uptime and user satisfaction.
  - Analyzed cloud infrastructure performance and implemented necessary optimizations.
- **Access & Policy Management:**
  - Managed RBAC, IAM, Entra ID, DLP, IDP, and PIM policies (using Google Workspace/MCAS).

## **GlowPoint – Murray Hill, New Jersey**

**Sr. Engineering, Video Application Infrastructure** | *Aug 2010 – Oct 2013*

- **Telecommunications Infrastructure:**
    - Led integration, development, architecture, QA, security, and interoperability for GlowPoint's telecommunications infrastructure.
    - Demonstrated expertise in SIP RFCs by reporting stack-level bugs to CISCO and Polycom.
    - Developed SIP message manipulations to mitigate manufacturer-related bugs.
  - **Product Enhancement:**
    - Enhanced the stability of GlowPoint's GPNow ad-hoc conferencing product and integrated CISCO VCS to improve enterprise communication solutions.
    - Spearheaded integration with Microsoft Lync and Polycom RMX series.
  - **Network Optimization:**
    - Optimized network protocols to boost communication efficiency, leading to improved user satisfaction and reduced support tickets.
    - Identified and resolved complex interoperability issues, ensuring a stable and secure telecommunications infrastructure.
    - Collaborated with cross-functional teams to deploy advanced conferencing features, promoting enhanced enterprise collaboration.
- 

## **UTC Associates – Culver City, CA**

**VoIP Engineer** | *Jun 2006 – Jul 2010*

- **Infrastructure Engineering:**
  - Engineered solutions to enhance studio efficiency and significantly reduce downtime.
  - Designed custom systems to meet high-demand production requirements.
- **Telecom Operations:**
  - Accelerated response times for telecom needs, optimizing studio operations.
  - Managed telecom infrastructure to ensure seamless communication in fast-paced settings.
- **Innovation:**
  - Pioneered custom solutions by adapting Siemens and Asterisk technologies to meet dynamic production requirements.
