PROFESSIONAL SUMMARY:

7 years of solid experience in backend development with deep involvement in object-oriented analysis, design, implementation, and support of enterprise-level web and distributed applications using Java-J2EE technologies, Node.js, and React.js.

- Expertise in building RESTful APIs and microservices-based architectures using Java (Spring Boot) and Node.js.
- Strong backend engineering background with experience in middleware, data access layers, and server-side logic.
- Experience with modern frameworks including Spring MVC, Spring Boot, Hibernate, and Express.js.
- Proficient in using React.js to build reusable UI components and integrate with backend RESTful APIs.
- Hands-on experience with database interaction using JDBC, JPA, Hibernate, and working knowledge of MongoDB and MySQL.
- Skilled in event-driven programming and JSON/XML handling for data exchange across APIs.
- Strong knowledge of multithreading, collections, exception handling, and Java design patterns.
- Implemented logging and monitoring for backend services using ELK Stack and Prometheus/Grafana.
- Optimized API performance using caching strategies (Redis) and asynchronous processing.
- Implemented role-based access control and API security using JWT, OAuth2, and HTTPS.
- Designed backend architecture for high availability, scalability, and fault-tolerant systems.
- Proficient in tools like Git, Maven, Jenkins, and Docker for CI/CD pipelines and containerized deployments.
- Experienced in developing scalable backend systems, implementing authentication and authorization, and session handling using JWT and OAuth2.
- Experienced in modeling applications using MVC architecture and implementing APIs for web and mobile clients.
- Strong understanding of SDLC, Agile/Scrum methodologies, and unit testing with JUnit and Mocha/Chai.
- Exposure to application servers like Apache Tomcat, WebLogic, and Node.js environments.
- Solid debugging and problem-solving skills; adept at writing maintainable and well-tested code.
- Excellent communication, collaboration, and technical leadership capabilities.

TECHNICAL SKILLS:

Programming Languages: Java, JavaScript (ES6+), Node.js, TypeScript

Frameworks & Libraries: Spring Boot, Spring MVC, Express.js, Hibernate, JPA, React.js, Redux

Web Technologies: HTML5, CSS3, JavaScript, JSX, REST, JSON, XML

Database Tools: MySQL, MongoDB, PostgreSQL, Oracle

Build & Deployment Tools: Maven, Gradle, Jenkins, Docker, Git, GitHub

Testing Frameworks: JUnit, Mockito, Mocha, Chai

Version Control: Git, GitLab, GitHub

CI/CD & DevOps Tools: Jenkins, Docker, GitLab CI/CD

Others: Postman, VS Code, Eclipse, IntelliJ IDEA, REST clients, JWT, OAuth2

Methodologies: Agile, Scrum, Test-Driven Development (TDD)

PROFESSIONAL EXPERIENCE:

Atlanticus Holdings Corporation, GA.

Aug 2023 – Till Date

Senior Backend Developer

Responsibilities:

- Designed and implemented RESTful web services using Spring Boot and Node.js.
- Developed and maintained microservices architecture to support large-scale applications.

- Built reusable API modules using Express.js for rapid development.
- Integrated MongoDB and MySQL for data storage and ensured proper indexing and schema design.
- Worked closely with frontend developers using React.js to design robust RESTful APIs.
- Built secure authentication mechanisms using JWT and OAuth 2.0.
- Utilized Docker for containerizing backend services and Jenkins for CI/CD pipelines.
- Implemented asynchronous processing using Java CompletableFutures and Node.js async/await patterns.
- Monitored and logged API activity using ELK stack and integrated alerts with Slack.
- Worked on optimizing database queries and indexing for faster response times.
- Refactored legacy code into modular microservices to improve scalability.
- Collaborated with DevOps for deployment automation using Jenkins pipelines.
- Designed API versioning and lifecycle management for long-term scalability.
- Implemented rate limiting and IP whitelisting for sensitive APIs.
- Integrated third-party services such as payment gateways and external REST APIs.
- Used Swagger and Postman extensively for API testing and documentation.

Environment: Java 11, Spring Boot, Node.js, Express.js, MongoDB, MySQL, REST API, Docker, Jenkins, React.js, JWT, OAuth2, Git, ELK Stack, Swagger

**Global Technologies, India,
Backend Developer**

Aug 2021 – Jun 2023

Responsibilities:

- Developed RESTful APIs using Java Spring MVC and Node.js with Express framework.
- Integrated backend services with React.js frontend using Axios and Fetch API.
- Designed and optimized relational schemas and queries in MySQL and PostgreSQL.
- Built middleware components for request validation, structured logging, and exception handling.
- Deployed containerized microservices using Docker and automated builds with GitLab CI/CD.
- Maintained backend unit and integration tests using JUnit, Mocha, and Chai.
- Used Redis for caching frequently accessed data to enhance performance.
- Developed and documented API endpoints using Swagger/OpenAPI.
- Migrated legacy monolith to microservices using Spring Boot and Docker Compose.
- Configured and implemented role-based access control using OAuth2.
- Integrated AWS S3 for secure file storage and retrieval.
- Built scheduled background jobs using Spring Scheduling and Node cron.
- Wrote custom utility modules for file parsing, data formatting, and input sanitization.
- Participated in grooming sessions and gave architectural input for service refactoring.

Environment: Java 8, Spring Boot, Express.js, PostgreSQL, MySQL, Node.js, Redis, Docker, GitLab CI/CD, Swagger, React.js, OAuth2, AWS S3

**Navit Software Solutions Pvt. Ltd., India,
Application Developer (Backend)**

Mar 2018 – Jul 2021

Responsibilities:

- Developed backend logic and services using Spring Boot, Hibernate, and REST APIs.
- Built APIs consumed by React.js dashboards and mobile applications.
- Managed and optimized MongoDB queries and schemas for performance.
- Created reusable error-handling and logging modules across microservices.
- Consumed external APIs and parsed XML/JSON data for business processing.
- Created Swagger/OpenAPI documentation for internal and external use.
- Automated backend testing with Mocha and integrated coverage reports into CI.
- Deployed applications to AWS EC2 and managed static files via S3.
- Built APIs with advanced features like filtering, sorting, search, and pagination.
- Maintained high-quality code with linting, code reviews, and test coverage.

- Integrated Nodemailer and JavaMail for email notifications and alerts.
- Wrote utilities for log rotation and archiving backend logs.
- Built CLI tools to support internal data migration and cleanup.
- Worked closely with QA and DevOps teams to improve staging and production rollout processes.

Environment: Java 1.8, Spring Boot, Hibernate, MongoDB, REST API, React.js, Swagger, Git, AWS EC2/S3, Mocha, JUnit, JSON/XML

Education:

- Master's in computer science, University of Central Missouri,
- Bachelor's in computer science, Lovely Professional University
