

Udith Rao Parvathaneni

RPA Developer

udith@vinsumsoft.us | +1 (434) 213-0052 | Work Authorization: OPT

PROFESSIONAL SUMMARY

- Overall, 4 years of IT experience with 2 years as a Robotic Process Automation Developer using UiPath.
- Experience in building RPA (Robotic Process Automation) solutions using UiPath
- Well Versed in all phases of (the SDLC) System Development Life Cycle from the investigation of initial requirements through analysis, design, development, implementation, and documentation Support
- Experienced in determining RPA best practices and suggests how to improve current quality processes, standards, and practices.
- Created RPA structure and team along with production support, designed and developed RPA solutions to accelerate business processes.
- Involved in Process Automation collaborations with business users globally to analyze business processes, recommend RPA-based solutions for the processes, and Develop Robots using UiPath.
- Worked on UI elements, Data scrapping, Selectors, PDF, Image and Text Automation and mainframe in UI path studio.
- Experience in Robotic Process Automation Tool in UiPath to automate web applications, desktop applications, Excel Automation, Image Recognition, PDF integration, etc.
- Expertise in creating Automation tasks in minutes, record keystrokes and mouse clicks and uses easy point and click wizards in UiPath.
- Good knowledge and understanding of SQL and PL/SQL. Experienced in working with Databases like SQL Server and MySQL.
- Develop robots using UiPath, identifying, and debugging the errors using error Handlers
- Part of RPA Capability is to look after all the issues that occur along different processes and assist developers in resolving issues.
- Automated tasks using web recording and scheduled tasks to repeat as per requirements.
- Performed tool evaluation and feasibility to heal pin selecting suitable Automation tool for RPA Implementation.
- Skilled at assessing client needs, working in a group, and supporting end users.
- In-Depth knowledge of design and architect web-based solutions.
- Strong logical and problem-solving skills.
- Multi cultured Team player with complete flexibility to work independently as well as in a team and have quick grasping capabilities to work with the newly emerging technologies.

TECHNICAL SKILLS

Automational Skills: UiPath 2024

RPA Tools: UiPath

Data Visualization: Tableau, Power BI, Excel

Database: MS-Access, SQL

Programming Languages: Python, HTML, Java

Cloud Technologies: AWS, Azure

EXPERIENCE

Client: Cigniti Technologies

Role: RPA Developer

Jan 2024 – July 2024

Roles and Responsibilities:

- Developing forms using Queries and front-end designing.
- Extensively used commands like Keystrokes, Mouse clicks, Open program/files, Files/Folders, Window actions, Log to File, Loops, System, Delay and Interactive.
- Developed robotic bots using UiPath to automate manual, repetitive, rule based and high-volume processes.
- Involved in Desktop Application Integration Automation like Excel, MS Word, Notepad and PDF.
- Effectively used String Commands, Excel Commands, PDF Operations, Metablogs, Decision Rules, Loops, and Variable Operations for performing various functions.
- Resolving issues and escalations raised by clients ensuring utmost client satisfaction.
- Meet business client team, gather and understand requirements and functionality to provide solutions to end users
- Provide estimations, track project progress, and make changes if required throughout the software development life cycle
- Work with business stakeholders, project managers, business analysts, software developers, data managers, peer organizations, quality assurance and technology
- Created technical/ functional documents for all developed application modules

Project Experience:

Email Automation

- Email Integration: Configured UiPath to access email accounts using activities such as Get Outlook Mail Messages and Send Outlook Mail Message.
- Email Retrieval and Processing: Automated the retrieval of emails based on predefined criteria (e.g., unread emails, specific subject lines) using IMAP and Outlook activities.
- Data Extraction: Utilized string manipulation and regular expressions to extract key information from email bodies and subjects.
- Attachment Handling: Automated the download, saving, and processing of email attachments to designated folders.
- Conditional Logic Implementation: Applied If and Switch activities to execute different actions based on the content and attachments of emails
- Automated Responses: Developed workflows to send automated responses and acknowledgments using Send Outlook Mail Message and SMTP Mail Message.
- Logging and Reporting: Implemented comprehensive logging to track processed emails and generated summary reports for audit purposes.
- Error Handling: Incorporated Try-Catch activities to manage exceptions and ensure robust error handling throughout the automation process.

Achievements

- Reduced manual email processing time by 75%.
- Achieved 100% accuracy in data extraction and email response tasks.

- Enhanced scalability, enabling the handling of a higher volume of emails without additional resources.
- Improved traceability and compliance through detailed logging and reporting.

Client: Verizon

Role: RPA Developer

Jan 2023 – Dec 2023

Roles and Responsibilities:

- Designed Automation Solutions using UiPath robotic process automation platform.
- Created database connections to fetch the data and automated the process to arrange data.
- Designing UiPath process solutions in accordance with standard UiPath design principles and conventions.
- Implemented UiPath features such as Optical character recognition (OCR), Image Recognition, Text Analysis, Data Base integration, PDF processing etc.
- Supporting the Operational Teams during the UAT and rollout phases
- Good Communication Skills Knowledge of the RPA process and can identify new processes if needed
- Developed and documented configuration best practices to create and maintain solution documentation.

PDF Automation

- **PDF Integration:** Utilized UiPath's PDF activities to read, extract, and manipulate data from PDF documents.
- **Data Extraction:** Implemented Optical Character Recognition (OCR) techniques and regular expressions to accurately extract relevant information from various types of PDF files, including scanned documents and forms.
- **Data Validation:** Applied validation rules and error-checking mechanisms to ensure the accuracy and consistency of extracted data.
- **Data Entry Automation:** Automated the entry of extracted data into systems such as Excel, databases, and ERP systems using UiPath's Excel and database activities.
- **Conditional Processing:** Used If and Switch activities to handle different types of PDF documents and apply appropriate extraction and processing logic.
- **File Management:** Automated the organization, renaming, and moving of processed PDF files to designated directories.
- **Error Handling:** Incorporated Try-Catch activities to manage exceptions and ensure robust error handling throughout the automation process.
- **Logging and Reporting:** Implemented logging mechanisms to track the status and details of processed PDFs and generated summary reports for audit and compliance purposes.

Achievements

- Increased data processing speed by 80% compared to manual methods.
- Achieved a 95% accuracy rate in data extraction from various PDF formats.
- Reduced manual data entry efforts, allowing employees to focus on higher-value tasks.

Optical Recognition Automation (OCR)

- OCR Implementation: Integrated OCR engines such as Tesseract and Google OCR to accurately extract text from scanned PDF documents and images within PDFs.
- Data Extraction: Employed regular expressions (Regex) to parse and extract relevant information from OCR-extracted text.
- Data Validation: Applied validation rules and error-checking mechanisms to ensure the accuracy and consistency of extracted data.
- Data Entry Automation: Automated the entry of extracted data into Excel spreadsheets, databases, and ERP systems using UiPath's Excel and database activities.
- Conditional Processing: Used If and Switch activities to handle different types of PDF documents and apply appropriate extraction and processing logic.
- File Management: Automated the organization, renaming, and moving of processed PDF files to designated directories.
- Error Handling: Incorporated Try-Catch activities to manage exceptions and ensure robust error handling throughout the automation process.
- Logging and Reporting: Implemented comprehensive logging to track the status and details of processed PDFs and generated summary reports for audit and compliance purposes.

Achievements

- Increased data processing speed by 80% compared to manual methods.
- Achieved a 95% accuracy rate in data extraction from various PDF formats.
- Reduced manual data entry efforts, allowing employees to focus on higher-value tasks.

Client: Cvent, Hyderabad, India

Role: Jr. Software Developer

May 2021 – June 2022

Roles and Responsibilities:

- Worked on a full spectrum of data engineering pipelines: data ingestion, data transformations and data analysis/consumption with Python.
- Skilled at performing complex data transformations and calculations in Excel, improving data usability for analysis.
- Regularly collaborated with cross-functional teams, offering expertise in data platforms such as Data Lakes and Data Warehouses.
- Involved in requirements gathering, analysis, design, development, change management, deployment.
- Managed Snowflake data warehouses to optimize query performance and ensure scalability for analytical workloads. Wrote SQL queries to identify and validate data inconsistencies in the data warehouse against the source system.
- Maintained version control for Power BI files and documented data modeling, report design, and best practices for team members, promoting collaboration and knowledge sharing.
- Worked with different types of data in Tableau like Excel files, Text files, JSON files. Spearheaded the transition to a NoSQL database.
- Extracted data using SQL from data sources and performed Exploratory Data Analysis (EDA) and Data Visualizations using R, and Tableau. Good understanding of data modeling (Dimensional & Relational) concepts like Star-Schema Modeling, Snowflake Schema Modeling, Fact and Dimension tables.

- Worked on building ETL pipelines using Python scripting, Pandas Data Frames. Integrated Kubernetes into CI/CD pipelines, automating application deployments and ensuring continuous delivery.
- Established robust backup and recovery strategies for NoSQL and MySQL databases, minimizing data loss. Loaded portion of processed data into Redshift tables and automated the process.
- Regularly collaborated with cross-functional teams, offering expertise in data platforms such as Data Lakes and Data Warehouses. Implementing data quality checks and validation procedures to maintain high data quality standards in the RDBMS. Implemented SQL queries on AWS with platforms like Athena and Redshift.

EDUCATION

Master of Science in Information Technology Oklahoma City University – Oklahoma
Bachelor Of Engineering Saveetha School Of Engineering – Chennai, India
