PROFESSIONAL SUMMARY

Full Stack Java Developer with 6+ years of end-to-end experience in building enterprise-grade microservices using Spring Boot, React.js and AWS. Proven expertise in designing scalable, secure and high-availability systems through RESTful APIs, CI/CD pipelines and containerized architectures. Skilled in Agile SDLC, cross-functional collaboration, and performance optimization to deliver maintainable, business-aligned technology solutions. Adept at applying SOLID design principles and clean coding practices to ensure high code quality, reliability and long-term scalability across manufacturing, pharmaceutical and corporate domains.

TECHNICAL SKILLS

Backend: Java, Python, Spring MVC, Spring Data JPA, Hibernate, Spring Boot, REST API's, Microservices, Server-side Development

Frontend: React.js, JavaScript, HTML5, CSS3, Bootstrap

Database: MySQL, PostgreSQL, MongoDB, Cassandra

Cloud & DevOps: AWS (EC2, Lambda, S3, RDS), Azure, Docker, Kubernetes, Jenkins, Git, GitHub, Maven

Practices & Methodologies: Agile Development, Scrum, CI/CD, Project Management, SDLC

Engineering Excellence: Data Structures and Algorithms, System Design, SOLID Principles, Design Patterns, Code Quality, Clean Code, Code Review, Performance Optimization

Soft Skills: Problem Solving, Communication Skills, Decision Making

EDUCATION

Master of Science - Computing and Information Systems

Youngstown State University, Youngstown, Ohio

Graduated : May 2025

GPA : 3.77 / 4.00

WORK EXPERIENCE

Cintas Corp, Mason, Ohio

February 2025 - Present

Java Full Stack Developer

Project : Service Operations Management Portal

Developed a cloud-based workflow automation platform that manages service requests, asset tracking and approval workflows across corporate departments. The application integrates Spring Boot microservices, React.js front-end and AWS cloud services to improve process automation, scalability and operational efficiency.

Responsibilities:

- Designed and developed RESTful APIs and microservices using Spring Boot and Hibernate/JPA, reducing backend response latency by 30%.
- Built and deployed cloud-native applications on AWS (EC2, Lambda, S3) using Docker containers and Jenkins CI/CD pipelines, achieving 99.9% uptime.
- Implemented Spring Security with JWT and OAuth2 to enhance data protection and user authentication.
- Collaborated with front-end teams using React.js and Angular to deliver responsive UI experiences that improved usability by 25%.
- Integrated Kafka Streams and WebSphere MQ for real-time event processing, reducing system latency and improving throughput.

Baker Tilly International, Columbus, Ohio

August 2024 - January 2025

Java Full Stack Developer

Project : Client Engagement Automation System

Built an Azure-based web platform to automate client onboarding, project tracking and financial reporting processes for Baker Tilly's business advisory teams. The system improved data transparency and workflow efficiency through a microservices architecture integrated with React.js and real-time dashboards.

Responsibilities:

- Migrated legacy monolithic applications to Microsoft Azure using Spring Boot and REST APIs, increasing scalability by 40%.
- Built real-time tracking systems with Node.js (Socket.io, Express) and React UI for instant status updates.
- Automated testing and deployment with Docker and Jenkins, cutting release times by 75% and improving deployment reliability.
- Implemented NoSQL schemas in MongoDB for horizontal scaling and improved query performance.
- Collaborated in Agile teams to deliver sprints on time while maintaining high code quality through unit and integration tests.

Cencora, Mumbai, India

July 2021 - November 2023

Java Full Stack Developer

Project : Pharma Supply Chain Management Dashboard

Developed a cloud-enabled supply chain management system for pharmaceutical distribution, providing real-time tracking of shipments, inventory analytics and supplier performance dashboards. The system leveraged microservices architecture and AWS deployments to ensure scalability and reliability.

Responsibilities:

- Developed React.js SPAs integrated with Spring Boot REST APIs for real-time data analytics and reporting.
- Designed and deployed microservices on AWS and Kubernetes, improving scalability and fault tolerance.
- Established CI/CD pipelines using Jenkins, Docker and Git, supporting clean and efficient deployment processes.
- Implemented unit and integration testing with JUnit, Mockito and Postman, ensuring release quality.
- Collaborated in Agile Scrum teams, contributing to sprint planning, innovation and cross-team collaboration.
- Optimized backend logic using SOLID principles and design patterns, reducing defect rate by 20%.

CEAT Limited, Mumbai, India

September 2019 - June 2021

Java Developer

Project : Dealer Inventory & Order Tracking System

Developed an internal enterprise web application to manage dealer inventory, order tracking and sales reporting across multiple regions. The platform improved data visibility, streamlined reporting and reduced manual interventions.

Responsibilities:

- Designed and implemented backend modules using Spring MVC, Hibernate/JPA and Oracle databases.
- Created SQL queries, stored procedures and PL/SQL functions to optimize data processing.
- Developed JMS-based messaging modules for distributed system communication.
- Delivered reports and dashboards using JasperReports, enhancing business intelligence.
- Participated in Agile development, sprint reviews and system testing to ensure delivery consistency.
