

Summary

Python Developer with 5 years of professional experience, in development, deployment and maintenance of Python applications. I have about 2 years in developing Python web frameworks(Django, Flask) and 2.5 years in python based ETL. As a side project, I have deployed home automation services using Docker and monitor them with Prometheus, Grafana, and Loki. I am a self starter, quick learner and always eager to learn new technologies.

Skills

- **Programming Languages:** Python, JavaScript, Java, SQL, PySpark
- **Databases:** MySQL, Elasticsearch, SQLite3, MongoDB
- **Web Development(Back-End):** Django, Flask, Express, Node
- **Web Development(Front-End):** React.js, HTML, CSS3, Bootstrap
- **Other Frameworks/Tools:** AWS EC2, S3, Appium, Selenium, Selenium Grid, Kibana, Splunk, Apache: Hadoop, Hive, Airflow, Atlas,

Professional Experience

Python Developer

Dec 2021 - June 2024

Wells Fargo Bank - Full Time

New York City, NY

Maintained and developed a python based ETL tool, batch-processing, that loads data from various data sources into a securely maintained Hadoop cluster. This tool centralized the data specifically used in the Cybersecurity domain of the bank, where security is a must and all data activity needs to be logged for security audits. Downstream teams would access/load this data in order to perform analytics. My role involved gathering business requirements from downstream teams and then implementing the code in ETL tool accordingly.

Responsibilities:

- Extensively worked on a python asynchronous(**asyncio**) ETL tool that extracts and transforms data from various data sources(SQL/NoSQL databases, **Splunk** and **Qualys** API, Linux machines storing log files and **Flat files**).
- Utilized **Pyspark/Spark SQL** to load and transform datasets of structured, semi-structured and unstructured data by using **DataFrames**.
- Performed data cleansing, transformation, and enrichment on python batch-processing jobs.
- Load data using **Sqoop** from **RDBMS**(Relational Databases Systems) such as MySQL, SQL, and Oracle databases.
- Converted python and **cron** ETL workflow into **Airflow DAG's** with the appropriate **Operators**.
- Created a feature that applied **data classifications** via **Apache Atlas API** endpoints to old and new **Hive** tables
- Migrated **PL/SQL** logic into **Pyspark**.
- Worked on integration of data quality checks as part of ETL process.
- Worked email alert feature that sends email alerts when tasks fail with a detailed log.
- Wrote SQL queries to maintain the SQL metadata database for the cluster.
- Involved in Analysis, Design, and Implementation/translation of Business User requirements.
- Conduct code reviews to ensure code quality, best practices, and adherence to company standards.
- Troubleshooting and debugging issues found on both test and production environments using log files stored in **HDFS**(Hadoop Distributed File Systems).
- Used **Git** as a version control tool for code base. **Jira**(Agile), **Scrum** framework, **Confluence** for work flow management.

Environment/Tools: Hadoop, HDFS, Hive, Apache Airflow, Apache Atlas, Sqoop, Splunk, PySpark, PL/SQL, MySQL Workbench, Oracle, CSV, JSON, XML, YAML, Python, Asyncio, Bash, Cron, PyCharm, Putty, Linux, Windows, Git

Python Developer

Jan 2019 - Dec 2020

AT&T Entertainment(Contractor via SummitWorks)

El Segundo, CA

Worked on a in-house tool that did Mobile Automation testing, where a user would be able create/execute automated tests on mobile platforms(such as iPhone, Android Phone, Fire TV, etc.). My role was heavily based on the backend of the application. Which varied from creating and managing Restful APIs, troubleshooting production server issues, managing

the SQL database, and creating informative documentation on features. Also, created/modified frontend components using [react.js](#), and wrote python automation scripts using Appium.

Responsibilities:

- Created Restful APIs using **Django REST Framework(DRF)** and Django's **Serializer** module.
- Created Django **Models** and utilized **QuerySets** to manage the back end and database integration.
- Optimized Django **QuerySets** that significantly speed up **MySQL** database look up time which reduced response times of **APIs**.
- Created Python scripts for automation testing on Android mobile devices using **Appium**.
- Designed document structures in **Elasticsearch** and integrated it to a Django web application .
- Designed custom **Kibana** dashboards based on requirements of different teams.
- Wrote basic **ETL** scripts in both **Python** and **Bash**.
- Created **Cronjobs** and **Bash Scripts** to clean up unused files on production systems and clear memory on android devices.
- Worked on [React.js](#) libraries and created/modified components for the front end of the application
- Troubleshooted and debugged issues while supporting production server.
- Created/modified basic components for the application's front end **React** server
- Developed Python and Django applications in a **UNIX** environment.
- Performed maintenance and deployments with **Django**, **Flask**, and **React** apps on **AWS EC2** Linux instances.
- Created and maintained **API** documentation using **Confluence** so other teams can use the product easier.
- Used **Bitbucket** as a version control tool and **Jira(Agile)** for work flow management.
- **Environment:** Python3, Django2, Flask, React.js, MySQL, SQL AWS EC2, S3, Elastic Search, Kibana, Jenkins, Bitbucket, Jira, Mac OS, Red Hat Linux, Windows.

Education

Bachelor of Science: Computer Science

Queens College of The City University of New York

May 2018

Flushing, NY
