SUMMARY

- 14+ years of experience in designing and implementing flexible yet robust solutions with .NET latest technologies under Scrum Methodology.
- 8+ years of experience in Security-Identity and Access Management domain.
- Expertise in Designing, and developing highly scalable, extensible, and maintainable software products and enterprise applications from the ground up.
- Familiarity with financial products like Portfolio and Asset Management, Collateralized Loan Obligations (CLOs).
- Migrating existing applications to take advantage of newer/better technologies and platforms.
- Leading and providing technical direction to development teams.
- Interacting with business users to gather and convert requirements into design and implementation.
- Experience in .NET Framework ASP.NET - developing Web Forms using ASP.NET, LINQ and Lambda Expressions, MVC, C#, JavaScript, jQuery, XML and HTML.
- In-depth knowledge in RestAPI, SOAP, and Web Services.
- Development exposure to Angular framework including Component development, HttpClient, API integration, routing etc.
- Strong experience in SQL Server and Oracle Database design, Database maintenance, developing queries, stored procedures, views, CTE, functions, cursors, and triggers using SQL Server.
- Proficiency in consulting, implementation, and configuration experience in IAM/IGA/PAM solutions such as Oracle Identity Manager, Deep Identity Manager and Privilege Identity Manager, Core Security Access Assurance Suite, Core Password and Core Compliance.
- Significant Exposure to Azure Cloud Infrastructure, Azure functions, Azure Key Vault, Azure Container registry (ACR) – Docker containers, Azure Privilege Identity management, Entitlement management and Azure AD.
- On site project implementation and consultation experience with integration to various target systems and aligning to business processes including customization with workflows and connectors
- Implementation of Password less Authentication products (an Advanced multi-factor authentication solution)
- Experience in implementing solutions on Oracle Solaris SPARC, Linux, and MS Server 2008 R2 Servers
- Familiarity with Agile Practices like Scrum, Kanban, CI\CD.
- Low code development with Oracle Apex.
- Skilled in quick learning new tools and handling lifecycle of projects from early stages including understanding of product functionalities, requirements gathering from client stakeholders, preparation of proposal for RFP and SOW, effort estimation, project management tasks, till project go-live.

TECHNICAL SKILLS

Languages

- C#, LINQ, SQL
- JavaScript, jQuery, Power shell, TypeScript

Databases

- MS SQL Server, Oracle 10g/11g, Mongo DB

IAM Tool

- Oracle Identity Manager, Oracle Identity Cloud Service, Deep Identity's Identity Audit and Compliance Manager (IACM) and Privilege Identity Management (PIM), Core Security's (Formerly Courion Corporation) Access Assurance Suite, Access Insight.

Tools

- TFS, JIRA, GIT, Bamboo, Share Point, VSS, Visual Studio, Oracle BI Publisher, MS Test Manager, Code Collaborator, NCrunch, MS AD, LDAP
- AllVue BMS

Frameworks

- .NET Framework, .Net Core Windows forms, WPF, Angular
- Entity Framework, REST, MSMQ, Micro-Services

Cloud Platform

- Microsoft Azure

GUI

- Telerik, DevExpress, Kendo UI, Bootstrap, React

Web Programming

- ASP.NET, JSON, HTML5, REST API, LINQ, XML\XSLT, CSS, Web Services, AJAX, MVC 5, MVVM

Methodologies

- Agile/SCRUM

Web Server

- Apache Tomcat, WebLogic, IIS 5.0/6.0/7.0

EDUCATION

- Master of Computer Applications from University of Pune, in 2010
- Bachelor of Science (Computer Science) from University of Pune, in 2007

CERTIFICATIONS

- Oracle Identity Governance Suite 11g PS3 Certified Implementation Specialist
- Microsoft Certified Azure Security Engineer Associate
- Microsoft Certified Azure Administrator Associate

PROFESSIONAL EXPERIENCE

Software Developer
Ana data Consulting Inc

Mar 2023 – till date

Virtus Investment Partners, NYC, NY

Jun 2024 – Dec 2024

Virtus's Asset Management solution enables fund managers to enhance their portfolio management efforts by collecting, analyzing, and reporting on performance and operating metrics of their portfolios and funds. The system provides collective data for all Securities gathered via processes from systems like Bloomberg, Lehman and JPM into one unified system as a single source of truth. Armed with Modules like Holdings & Risks data, Performance dashboards, analytic reports, Factsheets and ESG workflows, empowering better investment decisions based on accurate information.

Responsibilities:

- Collaborate with the Business team and stakeholders to gain a clear understanding of the business needs.
- Quickly grasp the current workflow and functionalities of existing systems.
- Customize .Net based Win forms\WPF application to implement new features and upgrades using C#.
- Research and integrate new third-party sources like MSCI, Sustainalytics to get ESG Research data for Issuers and present in desired format.
- Update Security Master to get data from IMS (Trade accounting system), MSCI, Sustainalytics to maintain integrity of Security instruments for portfolios.
- Access control over data visibility depending on user roles to maintain data privacy.
- Utilizing Angular for robust application logic, including component development, API, RxJS, NgRx and event handling
- Create database object like table, views, and functions to implement encapsulate business compliance rule.
- Writing complex queries for data extraction, including JOINS, subqueries, aggregations to automate daily tasks.
- Developing optimized stored procedures and functions to Insert\Merge data received through REST APIs and transform in data tables.
- Follow best practices for development to maintain security and data compliance.
- Merging code to various environments, create Pull requests, perform code review using Git repository
- Test solutions deployed to environments like Stage, UAT and production for each release cycle on Azure DevOps
- Create SSRS reports, Factsheets as per requirements.

Technologies: C#, SQL Server, Rest API, MVC, MVVM, Angular 18, VS Code, VS 2019/2022, Aspose, Azure DevOps, GitHub, SSRS reports, DevExpress, DevExtreme, Windows form, WPF

CIFC Asset Management, New York city

Jun 2023 – Jun 2024

BMS streamlines the collection and distribution of research, investment decision-making and monitoring, and integrate all the information used by a portfolio manager into real-time dashboards and interactive reports, allowing them to manage their exposures and risk in one place with comprehensive, accurate, and up-to-date information. It also features a broad set of capabilities and data via integration with Allvue's other modules, as well as third-party systems and data services.

Responsibilities:

- Co-ordinate with Research team and Portfolio managers to understand business requirements.
- Acquire a comprehensive understanding of existing procedures and applications in a short timeframe.
- Customize AllVue BMS Application using MVC, C#, jQuery, Agile Development to align with business goals.
- Create process to load data from user using Aspose libraries.
- Integrate with APIs to form a process to bring in data from third-party sources.
- Maintain integrity of Security Master through Bloomberg's data feed.
- Access control over data visibility depending on user roles to maintain data privacy.
- Design and develop reports in SSRS\DevExpress as per user requirements.
- Developing stored procedures, functions, and tables to formulate and extract data from large data tables to represent through reports or on dashboard using SSMS.
- Optimize existing procedures and functions to improve performance.
- Create branches, Push code to GitHub repository and deploy solutions to various environments like Stage, UAT and production by following standard CI\CD process in Azure DevOps.
- Write Test cases and verify integrity of solutions in various environments.
- Follow best practices for development to maintain security and data compliance.

Technologies: ASP.NET Core 7, C#, SQL Server, Rest API, MVC, VS 2019/2022, Azure DevOps, GIT repo, SSRS reports, Aspose, DevExpress, Postman, AllVue BMS

Sr Software Engineer/Technical Lead
Trigyn Technologies

Sep 2022 – Feb 2023
Pune, India

Push Order, Germany

Oct 2022-Feb 2023

PUSH® Order is a scanner-based system that you can use to place your orders automatically and at the same time check your inventory at any time. Also, it enables you to have efficient processes across multiple practices and warehouses. It does not matter whether you have a central warehouse or place your orders through central purchasing.

Responsibilities:

- Involved in Sprint Planning, refinement sessions and technical discussions.
- Understand requirement specifications and propose best implementation strategy.
- Utilizing Angular for robust application logic, including component development, API, state management, and event handling.
- Designed and developed APIs based on Micro-services architecture.
- Designed and developed Application using MVC, C#, jQuery, Agile Development
- Create Necessary table structures and pipelines using Mongo DB.
- Follow CI\CD workflow for code merging, review and maintain versioning using tools which composed of tools like Jira, bamboo and GitHub repository in Azure cloud environment.
- Follow best practices for development to maintain security and data compliance.
- Deploy and test solution on docker containers.
- Demo to stake holders in sprint review.

Technologies: ASP.NET Core 6, Angular 14, C#, Mongo DB, Rest API, Docker, MVC 6, VS 2019/2022, CI/CD, GIT repo, JIRA, Bamboo, Postman

Resource Management System (RMS)

Sep 2022 – Dec 2022

RMS provide HR and Recruitment team to automate process of on-boarding, handling offers, raise candidate requirements organization wide.

Responsibilities:

- Gather and understand requirements and provide estimates.
- Designed and developed features.
- Building reusable and responsive UI components using React.js.
- Writing/re-factoring Stored Procedures, triggers, cursors, user defined functions, tables, views and SQL joins and statements for applications.
- Team Handling.

Technologies: .NET Core, React, C#, SQL 2016, EF, Rest API, TFS

Technical Consultant

Bulwark IT Services

Oct 2020 – Apr 2022
Pune, India

Project:

IAM Product POC, Implementation Consulting, Technical Consulting and Customization to Integrate with Projects across multiple areas.

Responsibilities:

- Understanding business requirements and/or problems of Clients and proposing appropriate solutions
- Review the deliverables and provide necessary feedback.
- Developing responses to RFIs, RFPs, SOW
- Requirement Gathering discussions with client and Product vendors.
- Developing Customized Solutions using C#, Asp.net framework based on Customer's requirements.
- Supporting Sales related activities such as Proof-of-Concept, proposal presentations, Due-Diligence, solution campaigns, participating in workshops, etc.
- Contribute to the design, develop, and implement modern solutions ranging from ID lifecycle management and governance, authentication, authorization, and privileged identity management.
- Coordinate with onsite and offshore teams to support the IAM deployment at customer locations.
- Contribute to the process of acquiring Product Implementation and Technology Partnership Recognition from leading IAM Product Vendor
- Assessing requirements and coming up with appropriate sizing and estimations.

Technologies: IAM, Microsoft Azure, Oracle Apex, Oracle Database 19c, Microsoft .NET Core Framework 3.5, MVC, LINQ, C#, MS SQL Server 2012/2016, IIS, jQuery, Ajax, REST API, Domain Driven Design, REST API, Windows Server 2012/2016, Microsoft Exchange Server 2012/2016, Microsoft Active Directory 2012/2016, SSL, SAML, MFA, SSO, OAUTH, OPENID, Identity Federation.

Security Assessment Portal

This project deals with designing and developing Security Assessment Portal based on NIST Core Framework and Center for Internet Security (CIS) Critical Security Controls for the client. It helps to fill up a detailed survey about the current security posture at client side and generated Security Assessment Report. Security Analyst can also provide recommendations for improvements in the security posture.

Responsibilities:

- Thoroughly involved in the requirements gathering, architecture design, UAT, and Go Live
- Designed ER Diagram, Database design, Development using .NET Core, C#, MVC, and MySQL
- Performed Vulnerability Assessment of the Security Assessment Portal and analyzed the identified vulnerabilities and along with recommendations to handle them as per OWASP.
- Self-hosted deployment of the portal on AWS Cloud Platform along with HAProxy Server as Load Balancer front ending the portal.
- Encryption and decryption of configuration settings files data used for the portal.
- Troubleshoot the problems occurred during UAT.
- Identified and recommended appropriate infrastructure required such as Virtual Machine Size, RAM, Storage, and CPU Cores for deployment of portal in UAT and production environment.

Technologies: ASP .NET Core, MVC, LINQ, C#, MySQL 5.7.26, AWS Cloud Platform, HA-Proxy 1.5.18, jQuery, ChartJS, HTML CanvasJS, Ubuntu 14.04.3, CentOS 7.5, GitHub, QualysGuard.

PhilHealth Government Insurance, Manila, Philippines

Jan 2018 – Dec 2018

Oracle Identity and Access Management 12c

The Oracle Identity and Access Management 12c solution as part of Phase 1 with a user base of 6000, that comprises of three applications (1 Active Directory, Exchange, and 1 HRIS using Flat File) that are considered for provisioning integration. It is further expected to do the Requirement Analysis and design tasks for the IAM implementation with its web-based application integration for SSO

Responsibilities:

- Responsible for requirements gathering from four different branches with different organization structures, analysis, and design for Oracle Identity Governance and Oracle Access Manager Solution
- Designed information models (Identity and Authorization models and RBAC) according to requirements and suggested solutions based on standard best practices, prepared functional specifications, and communicated progress throughout the Project Life Cycle
- Implemented Oracle Identity Manager (OIM) and Oracle Access Manager (OAM) integration with Single Sign-on Integration of a Web Application with OAM.
- Install the SSL Certificate in WebLogic Keystore for OIM and client communication.
- Customizations for provisioning and de-provisioning using Java beans(EJB).
- Applications Integration with multiple on-premises systems for OOTB features such as Reconciliation, Provisioning, Auditing, Reporting, Self-Service Password Reset, and Unlock Feature of Oracle Identity Manager
- Responsible for customization according to organization structure and access request, and approval process
- Training stakeholders for implemented solution.

Technologies: Oracle Identity and Access Management 12c, MS Active Directory 2012, Oracle SPARC 11.4

RCBC Bank

Sep 2016 – Jun 2017

Deep Identity - IACM/ IM/ PIM

Pune, India \ Manila, Philippines

The project includes deployment, implementation, and customization of Identity Audit and Compliance Manager (IACM), Identity Manager (IM) and Privilege Identity Management (PIM); and Custom Development based on MS .NET Stack

Responsibilities:

- Designed information models (Identity and Authorization Models and RBAC)
- Gathered business requirements, and defined risk-mitigating controls and legal compliance requirements
- Configured workflows for provisioning, and application to IAM integration as well as User Migration in a phased methodology
- Responsible for process optimization, change implementation, and monitoring
- Collaborated with third party vendors to integrate off-the-shelf and custom software solutions
- Developed and implemented custom connectors, those not available OOTB

Technologies: .NET 4.5 Framework, C#.NET, ASP.NET, Entity Framework, LINQ, jQuery, MS SQL Server 2012

MasterCard

Redemption Manager

Redemption manager is a loyalty customer solution where the primary users like banks configure redemption rewards for their loyal customers. The solution manages the redeem transactions of the customer reward points which they earn through electronic card transactions.

Responsibilities:

- Followed all rules of scrum in developing product, worked on a sprint release cycle
- Involved in Sprint Planning with team, understood and estimated a story
- Worked on End-to-end Implementation of a feature or customization using C#, Bootstrap, JQuery and SQL
- Wrote unit test cases and deployment
- Performed code reviews
- Present demo to the stakeholders (Product owner, Delivery manager, BA's)

Technologies: .NET 4.5 Framework, C#.Net, ASP.NET, MVC, Bootstrap, LINQ, jQuery, MS-SQL Server 2012

Software Engineer

Apr 2012 – Feb 2016
Pune, India

Core Security - A HelpSystems Company (formerly Courion Corporation)

Access Assurance Suite

(Product Development and its Periodic Updates Releases, Support and Maintenance)

Access Request Manager (ARM) is an Identity and Access Management and Compliance solution that unifies Access Governance, Access Compliance, and Access Provisioning and focuses on access risk management.

Access Insight

Access Insight (AI) is a tool that performs Quick Scans or Deep scans on Active Directory, File Shares of various target systems. It visualizes the risk associated with those target systems and provides data to help the organization to take the decision on how to minimize the potential risk.

Responsibilities:

- Followed all rules of scrum in customizing product, worked on a Monthly release cycle for different version of the product.
- Involved in requirements gathering by interacting with the Clients.
- Responsible for product enhancement, solving critical customer issues in limited time.
- Worked on team coordination: Prepared team understand the requirements and helped them design and implement; helped in QA in times when required for on time release.
- Provided problem solving guidance to Professional Services Teammates about issues during their implementation of ARM, ComplianceCourier, Identity Mapping.
- Involved in problem analysis and estimation of the efforts required for the issues and provided the details to the higher management.
- Creating approaches and release documents.
- Follow development best practices to be compliant to standards like HIPAA, PCI, ISO to maintain data protection and integrity.
- Presented the demo to the stakeholders (Product owner, Delivery manager, BA's)

Technologies: .NET 3.5 Framework, C#.NET, ASP.NET, MVC, LINQ, Telerik Controls, DevExpress, jQuery, MS SQL Server 2008, Web API, WCF

Software Engineer

Jun 2010 – Mar 2012
Pune, India

Worldwide Infosoft Services, Pune

Project: The system was developed to automate all the request processing related to network administration. NMS provides an interface to manage all the access and security in the network from a central location. All the tasks including request for software, hardware, leave application, access to printer, or share folder, can be handled through this system in a simple, secure, and well-structured manner.

Responsibilities:

- Created approaches and release documents.
- Involved in End-to-end development phases of product Database and solution design for the product requirement.

Technologies: ASP.NET (3.5), C#, SQL 2008, JavaScript, VS 2010, IIS 6.0, XML, HTML.
