

Varma P
Sr Software Developer (Java)
Rvp3829@gmail.com
(512)-887-8994

PROFESSIONAL SUMMARY:

- Over 10+ of robust IT experience as a **Java Developer**, specializing in designing, developing, analyzing, and testing diverse **web-based, SOA, and client/server applications** across multi-platform environments using **Java/J2EE technologies**.
- Proficient in agile methodologies, including Scrum and Sprint, as well as traditional models like **Waterfall and Test-Driven Development (TDD)**.
- Expert in Core Java with a deep understanding of **OOP principles, collections framework, multithreading, thread pools, executor services, event handling, and exception management**.
- Designed and developed front-end screens using **React.js** leveraging predefined components from **NPM, Bower**, and the **Redux library** for efficient dependency management.
- Utilized Java 1.8's functional programming features, including **lambda expressions, functional interfaces, and parallel streams** to enhance code efficiency and readability.
- Strong experience in building web application using various Spring Framework features like **Spring Core, Spring MVC, Spring Boot, Spring REST, Spring IOC, Spring AOP, Spring Boot, Thyme leaf, Spring Security, Spring Injection, Spring JPA Crud and Spring Annotations**.
- Developed and maintained **Swagger** documentation for robust REST API microservices.
- Proficient in configuring and deploying web applications across multiple application servers, including **WebLogic, WebSphere, and JBoss**, with hands-on expertise in utilizing the **Tomcat web server**.
- Hands-on experience in building applications using the MVC framework with **Angular 10-13**, creating custom directives, controllers, and services to modularize and streamline code
- Extensive expertise in **Apache Kafka**, including the setup, configuration, and management of Kafka clusters.
- Strong knowledge of **Kafka architecture**, core components, and fundamental concepts like **topics, partitions, brokers, producers and consumers**.
- Proficient in utilizing Kafka APIs and libraries, including **Kafka Streams and Kafka Connect**, for building and integrating data pipelines.
- Proficient in managing relational databases such as **Oracle, MySQL, SQL Server and PostgreSQL**, including tasks like creating and managing **tables, views, indexes, sequences, stored procedures, functions, triggers, and cursors**.
- Hands-on experience with NoSQL databases, including **MongoDB, Cassandra, and Elasticsearch**, for handling unstructured and distributed data.
- Worked with **RabbitMQ** Java APIs for Queues to build the application as SOA platform.
- Hands-on experience with Amazon Web Services (AWS), including the implementation and management of services such as **EC2, S3, IAM, ELB (Elastic Load Balancers), EKS, RDS, VPC, Route 53, CloudWatch, and CloudFormation**.
- Skilled in using **Kubernetes** to orchestrate the deployment, scaling, and management of **Docker** containers for efficient containerized environments.
- Proficient in Continuous Integration and Deployment (CI/CD) tools such as **Jenkins and Harness** for automating build, test, and deployment pipelines.
- Hands-on experience with container-based deployments using **Docker**, including creating and managing Docker images and utilizing Docker Hub for image repositories.
- Experienced in using build tools such as **Maven, Gradle, and ANT** for project compilation, packaging, and dependency management.

TECHNICAL SKILLS:

Languages	Core Java, Java 1.8/11, SQL, PL/SQL, JavaScript, TypeScript.
Front End Development	HTML5, CSS3, ReactJS, Tailwind CSS, React Hooks, Angular (10-13), SASS, jQuery, JSON, Redux, Thymeleaf.
Cloud Services	AWS, Docker, Kubernetes, Kafka Streams, Kafka Connect.
Web/App Servers	Apache Tomcat 8, WebLogic, WebSphere, JBoss.
Design Patterns	MVC, Singleton, Proxy Pattern, Factory Pattern.
Design &Modelling	UML, Design Patterns, and Agile SCRUM
Tools	GWT, Eclipse,& Jenkins, JIRA, Maven and Gradle
Frameworks & Libraries	Spring Framework, Spring boot , Hibernate, Apache Kafka, RabbitMQ.
Web Service Protocols	SOAP, REST.
Databases	Oracle 12 /11g, MySQL, SQL Server, PL/SQL procedures.
NoSQL	MongoDB, Cassandra, Elasticsearch, Couchbase.
Development Tools	Eclipse, My Eclipse 6.x/8.x, Netbeans IDE, Visual Studio Code.
Version Control	Git, GitHub.
Testing	Junit, Mockito, Selenium.
CI/CD Tools	Jenkins.

PROFESSIONAL EXPERIENCE:

Wells Fargo, Dallas, TX.

Full Stack Developer

July 2024 - Present

Responsibilities:

- Experienced in Agile Methodology, actively participated in Sprints and daily Scrums to deliver software tasks on time with high quality.
- Proficient in using popular Java frameworks and libraries such as Spring, Hibernate, and Apache Maven to streamline development processes and enhance application features.
- Built and managed Kubernetes clusters using Terraform on Amazon Web Services (AWS).
- Utilized Amazon CloudWatch to monitor application alerts and deployed applications on AWS using AWS CloudFormation.
- Monitored EMR clusters and jobs using the AWS Management Console and used CloudWatch Dashboards for performance tuning and optimization of memory-intensive jobs. Provided L3 support for production applications.
- Leveraged a wide range of AWS cloud services, including EC2 instances, Auto Scaling, and Elastic Load Balancer (ELB), to optimize infrastructure scalability, enhance performance, and ensure high availability within the cloud environment.
- Configured CI/CD pipelines using GitHub Actions, automating code integration, testing, and deployment to various environments, resulting in faster and more reliable releases.
- Designed and developed the front end of applications using Angular 8.0, Node.js, HTML5, CSS, jQuery, and AJAX.
- Deployed and managed containerized applications using Amazon Elastic Kubernetes Service (EKS), leveraging Kubernetes for orchestration, auto-scaling, and load distribution.
- Collaborated with cross-functional teams (e.g., Product, Project Management) to ensure delivered code met specifications based on functional and technical requirements.
- Conducted performance profiling and optimizations for critical microservices to improve system efficiency.
- Documented API specifications and usage guidelines for both internal and external stakeholders.
- Designed RESTful APIs for microservices, ensuring standardized communication interfaces.

- Efficiently performed Extract, Transform, and Load (ETL) operations from backend databases to support business intelligence and analytics, utilizing advanced SQL techniques.
- Successfully deployed existing canonicals from old filtered streams to new filtered streams.
- Experienced in using JDBC to connect Java applications to databases, execute SQL queries, and implement best practices to prevent SQL injection vulnerabilities.
- Possess a strong understanding of Kafka's architecture, including concepts like producers, consumers, brokers, topics, partitions, and offsets.
- Enhanced data pipelines by integrating filtered streams, reducing unnecessary data processing, and improving overall system performance.
- Led a complete UI upgrade of an Angular Single Page Application (SPA), migrating from Angular v8 and v11 to the latest versions of Node v14 and Angular v14.

Environment: Java/J2EE, JDK 11, Java 11, Kafka, Angular, AWS (Amazon Web Services), Amazon EKS (Elastic Kubernetes Service), SOAP/REST Web Services, Spring Boot Microservices, Kafka, MapReduce, SOAP, HTML5, Postman, TypeScript, Kibana, Jenkins, JUnit, Mockito, Splunk.

Cigna, New York, NY.

Full Stack Developer

Jan 2023 – June 2024

Responsibilities:

- Actively participated in the full software development life cycle (SDLC), including requirements gathering, design, development, testing, deployment, and maintenance.
- Designed and developed an online banking platform using Java, Spring Boot, and AngularJS, enabling customers to manage accounts, view transaction history, and securely make payments.
- Utilized Elasticsearch for custom name pattern matching to meet specific business requirements.
- Implemented and optimized advanced Elasticsearch features such as field mapping, analyzers, and tokenizers to ensure precise and efficient search functionality.
- Developed and maintained automated scripts for Elasticsearch to streamline data indexing and search operations.
- Built a robust payment gateway system integrated with multiple payment providers, supporting various payment methods including credit/debit cards, e-wallets, and bank transfers.
- Maintained comprehensive technical documentation, provided technical support, and resolved production issues promptly to ensure system reliability.
- Integrated Amazon Web Services (AWS) with existing application infrastructure to enhance scalability and performance.
- Leveraged Spring Boot to accelerate the development of cloud-based microservices and create Spring applications with minimal configuration.
- Configured Jenkins for application deployment and integrated it with GitHub for version control. Participated in daily Scrum meetings to discuss progress and resolve issues.
- Conducted unit testing for various modules by creating test cases using Jest and Enzyme.
- Used GitHub for version control to manage project versions and supported applications through debugging, fixes, and maintenance releases.
- Wrote JUnit test cases and managed daily builds and deployments using Maven and Jenkins.

Environment: Java 1.8, Spring Boot, Microservices, AWS, EC2, S3, Docker, Bootstrap, Hibernate, Agile, WebSphere, Oracle, Eclipse, HTML5, CSS3, AJAX, Git, React JS, Node JS, Maven, Jenkins, Mongo DB, Rest, JUnit.

Reyes Holding, Chicago, Illinois.

Java/J2EE Developer

July 2020 - Dec 2022

Responsibilities:

- Designed and developed microservices using Spring Boot, creating scalable and modular applications.
- Created Request and Response XML schemas (XSD) for SOAP-based web services, ensuring seamless communication between modules.
- Utilized Spring Dependency Injection (DI) to manage and wire business class objects, promoting loose coupling and maintainability.

- Built a microservice architecture where Spring Boot services communicated via REST APIs, Kafka message brokers, and Amazon SQS for asynchronous messaging.
- Implemented an event-driven architecture to manage and process various event types efficiently within a unified platform.
- Managed database connections using Spring Cloud configurations.
- Developed XML-based SQL queries to retrieve data during database migration processes.
- Enabled asynchronous communication between components using JMS (Java Message Service) for reliable message delivery.
- Leveraged Couchbase NoSQL database in a multi-node cluster configuration to ensure high availability and scalability.
- Configured Couchbase Cache to optimize the retrieval of frequently accessed orders, improving system performance.
- Tracked bugs and user stories using collaboration tools like Wiki and Rally.
- Configured GoCD pipelines to trigger builds automatically upon Git commits, streamlining the development workflow.
- Developed Swagger API documentation for microservices, providing clear service definitions to end users.
- Deployed Couchbase servers on Docker to maximize resource utilization and system efficiency.
- Implemented Continuous Integration (CI) using GoCD, automating the build, deployment, and testing of microservices across various environments via pipelines.
- Utilized Oracle-specific features such as PL/SQL to develop stored procedures, functions, and packages for database operations.
- Integrated Java applications with Oracle DB using JDBC, handling data migration, backup, and recovery processes.
- Created unit test cases using frameworks like JUnit and Mockito to validate business logic and use case scenarios.

Environment: Java, J2EE, Web-Services, microservices, Netflix OSS, Spring Framework, Spring Boot, Spring MVC, JAX-B, Oracle 12g, SQL, Couchbase, Pentaho, GoCD, Docker, JavaScript, PCF, Swagger, Log4j, JUnit, JIRA, STS, Windows XP, Unix.

T-Mobile, Bellevue, WA.

Java full stack Developer

Jan 2018 – June 2020

Responsibilities:

- Developed robust backend systems using **Java (1.8/11)**, **Spring Framework (Spring Boot, Spring MVC, Spring Security, Spring JMS, Spring Batch)**, and **hibernate** for secure, scalable, and high-performance applications.
- Designed and implemented microservices architectures using **REST APIs** with **JSON** for seamless service integration and communication. Crafted dynamic and responsive user interfaces using **ReactJS (with Hooks)**, **Angular (10-13)**, **TypeScript**, **HTML5**, **CSS3**, **Tailwind CSS**, and **SASS**.
- Developed Single-Page Applications (SPAs) to enhance user interactivity and experience. Utilized **Redux** for state management and **Thymeleaf** for server-side rendering.
- Deployed and managed cloud-based solutions on **AWS**, leveraging **EC2**, **VPC**, **Subnet**, **Docker**, and **Kubernetes** for scalable, resilient, and secure infrastructure. Configured and maintained **CI/CD** pipelines using **Jenkins** and **TeamCity** to streamline deployment processes and improve efficiency.
- Designed and optimized **Oracle 12/11g**, **MySQL**, and **SQL Server** databases, writing efficient **PL/SQL** procedures and queries for data manipulation and performance tuning. Worked with NoSQL databases like **MongoDB**, **Cassandra**, and **Elasticsearch** for unstructured data storage and retrieval.
- Ensured code quality and reliability through unit testing with **JUnit** and **Mockito**. Automated testing processes using **Selenium** for end-to-end testing and validation.
- Utilized **Eclipse**, **IntelliJ IDEA**, **Visual Studio Code**, and **JDeveloper** for development, debugging, and project management. Managed version control with **Git** and **GitHub** and tracked issues using **JIRA** and **YouTrack**. Built and managed dependencies with **Maven**, **Gradle**, and **SBT**.
- Spearheaded end-to-end software development projects, managing the entire Software Development Life Cycle (SDLC) while adhering to industry best practices and quality standards. Championed Agile methodologies, fostering team collaboration, adaptability, and timely delivery of high-quality software solutions.

Environment: Java (1.8/11), SQL, PL/SQL, JavaScript, TypeScript, ReactJS, Angular (10-13), HTML5, CSS3, Tailwind CSS, SASS, Redux, Thymeleaf, JSON, Spring Framework, Hibernate, REST APIs, RabbitMQ, AWS (EC2, VPC, Subnet), Docker, Kubernetes, Terraform, Jenkins, Oracle 12/11g, MySQL, SQL Server, MongoDB, Cassandra, Git, GitHub, Eclipse, IntelliJ IDEA, Visual Studio Code, JDeveloper, JUnit, Mockito, Selenium.

Digit, Hyd, India.

Java/J2EE Developer

March 2014 – Dec 2016

Responsibilities:

- Actively participated in all phases of the software development lifecycle, including Analysis, Design, Development, System Testing, and User Acceptance Testing (UAT). Utilized Agile methodologies, such as Test-Driven Development (TDD) and Scrum, to deliver high-quality solutions.
- Developed multiple enterprise-level applications using Spring MVC, Hibernate, and RESTful web services to ensure scalability and maintainability.
- Designed and implemented user interfaces using Spring View Components, HTML5, CSS3, Bootstrap, AngularJS, and Vue.js to create responsive and intuitive front-end experiences.
- Integrated Angular 4's built-in HTTP service with custom services to facilitate seamless communication between the front end and back end via RESTful APIs.
- Built RESTful web services using Spring RESTful, enabling efficient data exchange in JSON format between the front end, middle tier, and controllers.
- Managed project builds and dependencies using Apache Maven, ensuring consistent and efficient project compilation and packaging.
- Utilized Log4j for generating runtime logs and ClearCase for project and version management to maintain code integrity and traceability.
- Employed Git as the version control system for code check-in/check-out and conducted code reviews through pull requests to ensure code quality.
- Designed and implemented CI/CD pipelines for microservices deployment on AWS, leveraging tools like Jenkins, GitHub, Docker, Ansible, and Kubernetes for automation and scalability.
- Wrote unit tests using JUnit and Mockito frameworks and measured code coverage using the Emma plugin to ensure robust and reliable code.

Environment: Java 1.8, Spring Boot, Microservices, AWS, EC2, S3, Docker, Bootstrap, Hibernate, Agile, WebSphere, Oracle, Eclipse, HTML5, CSS3, AJAX, Git, React JS, Node JS, Maven, Jenkins, Mongo DB, Rest, JUnit.

Education:

- **Master's in Data science from University of North Texas.**
