

Venkat Goli

Sr. Devops (Prompt Engineer)

venkat.goli92@gmail.com • +1 (404) 579-6385

Summary:

Results-driven DevOps (SRE) and Infrastructure Engineer with over a decade of experience in building, automating, and managing scalable systems across telecom, networking, and cloud. I enjoy leading teams, optimizing CI/CD pipelines, and improving operational efficiency. With a strong focus on automation and best practices, I help streamline deployments and enhance system reliability. Passionate about innovation, collaboration, and making a real impact.

Management Expertise:

- **Tools** : Jira, Service-now, draw.io, ppt, excel, MS To do, visio, slack, zoom, teams, confluence.
- **Skills** : Strategic thinking, problem solving, decision making, forward planning, delegation, motivation, organization, mentoring, documenting.

Technical Expertise:

- **DevOps Tools** : Jenkins/ Teamcity, Ansible, GitLab, Puppet, Bit Bucket/ GitHub, Docker/ Podman, GitOps CI/CD, Agile
- **Cloud Technologies** : AWS, AWS lambda, Open stack, Google Cloud Platform(GCP)
- **Scripting** : Python, Java, Bash, Shell, Ruby, Groovy
- **AWS** : S3, EC2, IAM, API Gateway, VPC (subnets,security groups, NAT gateways,Route tables), CloudWatch
- **Secret Server** : LastPass, Delinea, AWS Secrets manager
- **Hashicorp Tools** : Terraform(Infrastructure as a code),Helm, Packer, Vault,Consul, AgroCD
- **Operating Systems** : Server OS-Linux OS's, Windows Server2012, Unix
- **Hypervisor** : VMware ESXI-5.0-6.0, Vcenter, KVM, RHVM
- **Containerization** : AWS – ECS/EKS, Docker – compose, swarm, Kubernetes, OpenShift
- **Monitoring** : Datadog, Nagios, Grafana, Prometheus, Graph QL, Elasticsearch, Logstash, Kibana, Filebeat, Cloud health, Centilytics, NewRelic
- **Data Serialization** : JSON, YAML, XML, CSV, INI
- **Database** : Mongo DB, RDS, Aurora, Postgres, Dynamo DB, Redis, Oracle Database / Oracle EBS
- **Other Tools** : Maven, Kafka, Springboot, Junit, HTML5, CSS3, Jfrog Artifactory,nginx Sonarqube, VS code, apache, Tomcat, PyCharm, Helm charts, Cloudformation

Certifications:

- AWS Certified Solutions Architect
- Certified Kubernetes Administrator
- Cisco Certified Network Associate
- Microsoft Certified Technology Specialist

Professional Experience:

1: Deque Software (2023/09 – Present)

- ✓ By using advanced methods in Python performed data analysis and generated report that provides the vulnerabilities data.
- ✓ Developed a cloudformation template which creates a lambda function, AWS config rule and in-line permissions to list out the dangled EBS volumes and also the in appropriate tags to the AWS services and then notify in the slack channel.
- ✓ Integrated cloudflare into the AWS route53 FQDNS using cloudformation stack.
- ✓ Developed a Python script to automate the migration of RDS instance type as well as the updating the engine version of mysql and psql.
- ✓ Written automation scripts to dynamically scale the self-hosted runners in the CircleCi.
- ✓ Implemented the auto sync of cloud formation with Git and GitHub actions.
- ✓ Worked on regular security patching's on the EC2 as well on the docker images.
- ✓ Integrated each piece of developed code by the entire team into the Jenkins using Jenkins pipeline.
- ✓ Designed and implemented scalable AWS Batch processing workflows using ECS and Fargate, optimizing resource utilization and reducing processing time.
- ✓ Created a utility for the DevOps team in terms of accessing secrets in an automated way, where the secrets are stored in the Delinea Secret server.

2: Juniper Networks (2023/05 – 2023/08)

- ✓ Wrote a python script by developing the complex algorithms to refine the large amount of data in monitoring to a spread sheet using data frames.
- ✓ Optimized the performance of the system using multi-threading and parallelism in python
- ✓ Gathered the required data using advanced data structures in python and helped developers to narrow down the burden in monitoring.
- ✓ Strengthened cloud security by setting up robust access controls with AWS IAM, KMS, and other security services, ensuring compliance with best practices.

2: Brillio Technologies (2021/05 – 2023/05)

Client – I : Ciena (Blueplanet Enterprise)

- ✓ Responsible for the strategy, planning, direction & coordination of all activities associated with enterprise product and managed a small team of multi skilled DevOps engineers
- ✓ Formulated the on-prem & cloud infrastructure's strategic & operational planning to achieve business goals by fostering innovation, prioritizing initiatives, coordinating the evaluation, deployment & managing of multiple AWS cloud accounts of the enterprise product.
- ✓ Contributed vision & leadership are consistent with the company's technology strategic plans and objectives to deliver technology initiatives in support of the growth of the BPE project with new automations.

Client – II : Adtran

- ✓ Created custom index pattern in Kibana of Logstash while integration.
- ✓ Implemented the logstash event processing pipeline in elastic search.
- ✓ Written custom filebeat.yaml file to configure the logstash for the logs to capture and send it's output to elasticsearch
- ✓ Applied multiple filters in the logstash to actually send the necessary data/ metrics to Kibana.
- ✓ Categorized the Kibana visualization charts and added alerts to it based on the threshold levels.

3: Cisco Systems (2019/05 – 2021/04)

- ✓ Perform end to end CI/CD of an application release.
- ✓ Developed maven pom.xml file and linked parent pom

- ✓ Added external libraries to the maven's pom.xml and helped developers to have code coverage
- ✓ Assign work to devops engineers based on the issues in their respective BU's.
- ✓ Trace the errors in the pipeline raise ticket and discuss with the team members, assign it with the issue priority.
- ✓ Worked on MQ, Elastic cache, MSK.
- ✓ Improved efficiency by automating tasks, streamlining workflows, and introducing better tools to enhance daily operations.

4: Capgemini (Altran) (2017/06 – 2019/05)

- ✓ Develop python automation scripts for installation of the package.
- ✓ Parsing the manifest file of the deployment tools application with python
- ✓ Proactive health management of servers and applications by analyzing health trends through various scripts.
- ✓ Triggered CD jobs in Jenkins if any change in channel version.
- ✓ Pull code from Bitbucket and modify script from a private branch and raise pull request.

5: Adecco (Cisco Systems) (2016/03 – 2017/06)

- ✓ Complete knowledge on Vsphere, Vcenter, VHA, Vapp, VA marketplace, sites etc
- ✓ Troubleshooting KVM of Cisco CIMC, Dell Idrac.
- ✓ Executing python script on switches to get status and configuration.

6: Novel Group (2014/11 – 2016/03)

There are two services in this project.

1) Services

This service is about the processing and completing the application of the customer where the customer will enter personal and insurance policy he has opted for. In this project we have used Restful web-services to send data to Android and IOS applications. During this process the customer has to agree to the terms and conditions of the Aditya Birla Insurance policies. He has to undergo vocal and facial recognition like voice, image and video capturing.

2) Admin

This service can only be accessed by admin of Aditya Birla. It is a web based project. In this services the admin is able to check the status of the application and can view image, video and audios recorded by the customer during the process of application.

- ✓ Developed various Java Bean components for implementing business logic.
- ✓ Developed JAX-WS (Soap) layer to send request to client as a communicating interface

7: 31-West Global (2014/03 – 2014/10)

- ✓ Basic configuration of linux through GUI
- ✓ Adding /removing the virtual hardware resources based on client requirement in VC.
- ✓ Configuration of Cisco 1900 router and enabled internet.

Educational Qualification:

Bachelor's degree in Electronic and Communication Engineering for the Academic Year 2009 - 2013 from JNTU Kakinada, Andhra Pradesh.
