

Professional Summary:

Results-driven Java Full-Stack Developer with 5+ years of experience in designing, developing, and deploying scalable web applications and microservices. Proficient in Spring Boot, Spring MVC, Hibernate, RESTful APIs, and AWS, with expertise in Java 8+ features, Microservices architecture, and front-end technologies (React, Angular). Adept in CI/CD pipelines, Test-Driven Development (TDD), and cloud-based solutions. Strong team collaborator with a commitment to delivering high-quality software solutions.

ACADEMICS:

University of Dayton, Dayton, Ohio, USA

CGPA: 3.45

Master's - Computer Science

Aug. 2021 – May 2023

Technical Skills:

- **Programming:** Java (8/11/17), JavaScript, SQL, Node.js
- **Frameworks:** Spring Boot, Spring MVC, Hibernate, JPA
- **Frontend:** React.js, Angular, HTML5, CSS3, JavaScript, AJAX, Redux
- **Databases:** MySQL, SQL Server, MongoDB
- **Cloud & DevOps:** AWS (EC2, S3, RDS), Docker, Kubernetes, Jenkins
- **Tools & Methodologies:** Git, Agile, Scrum, JIRA, CI/CD Pipelines

Professional Experience:

Client: Humana – Indianapolis, IN

Oct 2022 – Till date

Role: Java Full Stack Developer

Responsibilities:

- Designed and developed **microservices architecture** using **Spring Boot** and **Java 17**, reducing deployment cycles by **40%** and improving system modularity.
- Built **RESTful APIs** with **Spring MVC** and **Spring Security**, incorporating **OAuth2 authentication** and **role-based access control (RBAC)**, enhancing data security compliance by **50%**.
- Optimized database performance by **45%** using **Hibernate/JPA**, connection pooling, and second-level caching for high-traffic healthcare portals.
- Leveraged **AWS** (EC2, S3, RDS) to enhance scalability and availability of the **Humana Data Exchange (HDX)** platform, ensuring reliable access to services for users.
- Developed dynamic, ADA-compliant user interfaces with **Angular 16**, improving user interaction and ensuring responsiveness for diverse user groups.
- Implemented **Kubernetes-based** container orchestration, ensuring smooth deployment and scalability.
- Automated infrastructure provisioning using **Terraform**, improving resource management.
- Designed and optimized **APIs** using **Swagger and Postman**, ensuring seamless integration across services.
- Built **CI/CD pipelines** using **GitLab CI and Jenkins**, improving deployment efficiency.
- Led automation testing initiatives using **Cypress and Selenium**, ensuring software reliability.
- Resolved customer issues using **Zendesk and JIRA**, streamlining incident management.
- Integrated **Kafka** for real-time data streaming, enhancing system responsiveness.
- Ensured compliance with **HIPAA** and **FHIR** standards through robust security measures, including encryption and secure coding practices.
- Conducted performance tuning and debugging, achieving high availability and reliability of the platform.

Environment: Java 17, Spring Boot, Hibernate, Angular 16, AWS, Docker, Jenkins, RESTful APIs, SQL Server, PostgreSQL, Agile.

Client: HSBC – Hyderabad, IN

May 2019 – July 2021

Role: Jr Java Full Stack Developer

Responsibilities:

- Built responsive and interactive user interfaces with **Angular 8**, enhancing user experience and engagement.
- Developed and maintained **Java-based** backend applications using **Spring Boot** and **Java 11**, ensuring efficient data processing and system stability.
- Integrated real-time communication services using **WebSocket** and **RabbitMQ**, enabling timely updates across the platform.
- Developed **Node.js-based middleware services** to facilitate seamless API communication between frontend and backend,

optimizing response times.

- Developed **RESTful APIs** and backend services using **Spring Boot and Hibernate** for web and mobile applications.
- Worked with **PostgreSQL and SQL Server**, optimizing database performance and query efficiency.
- Built and deployed applications on **AWS EC2 and S3**, improving system availability.
- Automated testing using **JUnit and Mockito**, maintaining high code quality.
- Used **Docker to containerize applications**, ensuring consistency across environments.
- Resolved technical issues **via Freshdesk and JIRA**, maintaining smooth operations.
- Enhanced security measures by integrating **Spring Security and OAuth2**, improving authentication mechanisms.
- Collaborated with cross-functional teams, including UX/UI designers and DevOps engineers, to align solutions with user needs and business objectives.

Environment: Java 11, Spring Boot, Angular 8, AWS, Docker, Jenkins, RESTful APIs, MySQL, Agile.

Client: Payapl , India

Oct 2018 – Mar 2019

Role: Java intern

Responsibilities:

- Designed and developed key modules for an **ERP system** using **Java and Spring Framework**, including inventory management and sales tracking.
- Built **RESTful APIs** for seamless data exchange between system components, improving integration efficiency.
- Optimized database queries using **MySQL**, enhancing real-time system access and performance.
- Implemented basic security measures, including access control and encryption, to protect sensitive data.
- Conducted troubleshooting and debugging to improve system stability and performance.

Environment: Java 8, Spring Framework, MySQL, RESTful APIs, Agile.
