SUMMARY

Full-Stack Developer with 4 years of experience in Java, Spring Boot, React, and cloud-native microservices. Delivered up to 40% efficiency gains and 25% faster feature delivery by optimizing architectures, enhancing system security, and automating CI/CD pipelines. Skilled in building secure, scalable, and innovative solutions on AWS and Azure within dynamic Agile team environments.

TECHNICAL SKILLS

Languages & Technologies: Java, Python, C, JavaScript, TypeScript, HTML/CSS, R, PHP, Spring Boot, Spring Framework, Spring MVC, Spring Cloud, Hibernate, ReactJS, YAML, JSON, XML, Bootstrap, LangChain.

Databases: SQL, MySQL, PostgreSQL, Oracle, MongoDB(NoSQL), PL/SQL, SQL Query Optimization.

Developer Tools & Platforms: Git, Maven, Gradle, JUnit, Mockito, Postman, REST Assured, IntelliJ, AWS (EC2, S3, Lambda, API Gateway, SQS, SNS, CloudWatch), Docker Containerization, Kubernetes, Terraform, Eclipse, VSCode, PyCharm, Jira, Bitbucket, Github Copilot, Confluence, SonarQube, Nexus Repository, Azure, Version Control.

Other Technologies: RESTful Web Services, Microservices Architecture, Event-Driven Microservices, Kafka, API Gateway Integration, OpenAPI/Swagger, OAuth 2.0, JWT Authentication, System Design Principles, CI/CD Pipelines, Agile (SAFe), Sumo Logic, GraphQL.

EXPERIENCE

Graduate Assistant

Aug 2024 – May 2025

Texas Tech University

- Developing scalable Spring Boot microservices with robust user interfaces using ReactJS, implementing secure RESTful APIs with OAuth 2.0, JWT authentication leveraging .
- Building web applications with ReactJS and Spring Boot on Azure cloud platforms, optimizing database performance through efficient query handling and indexing, implementing SPA architecture for improved user experience with Kubernetes orchestration.
- Implementing comprehensive monitoring solutions using Azure Monitor and Sumo Logic dashboards, contributing to automated testing with Selenium framework and CI/CD pipelines, collaborating with cross-functional teams in SAFe Agile ceremonies.
- Designing enterprise application architecture with Spring Cloud, supporting cloud-native microservices migration using Azure Service Bus, implementing web security with RESTful web services with Kafka for real-time analytics in SAFe Scrum framework.

Full Stack Java Developer

Nov 2020 – Aug 2023

Cognizant Technological Solutions

- Built cloud-native, event-driven microservices and secure RESTful APIs using Java, Spring Boot, and AWS for the 'IELTS Modernisation' project, handling millions of concurrent users, integrating with a React frontend built with TypeScript and validating end-to-end flows, boosting scalability and accelerating feature delivery speed by 25%.
- Optimized PostgreSQL with query tuning, JPA/Hibernate adjustments, and indexing, improving efficiency by 35%. Automated AWS API Gateway integrations with Swagger (OpenAPI) contracts and integration testing to streamline service communication and strengthen reliability across distributed microservices. Employed AWS Lambda, SNS, and SQS to build event-driven workflows.
- Resolved complex production issues in large-scale systems and coordinated hotfix releases with minimal downtime. Established observability using Sumo Logic and CloudWatch with distributed tracing that reduced MTTR by 40% and improved system uptime to 99.8%. Increased test coverage to 98% implementing unit and integration tests with JUnit, Jest and Mockito.
- Streamlined GitLab CI/CD pipelines and containerized applications with Docker on AWS EC2. Conducted code reviews with Git, enforced coding standards, and mentored developers while facilitating knowledge transfers and supporting architectural decisions. Leveraged Maven/Gradle builds, SonarQube for code quality, and Nexus for artifact management in enterprise solutions.
- Developed reusable React components and enhanced Redux state management to reduce re-renders by 20%. Built responsive interfaces with JavaScript ES6, HTML5, CSS3, and Tailwind, implementing WCAG accessibility testing to improve user satisfaction by 40%.
- Configured OAuth 2.0 API security per OWASP standards and implemented structured logging with Log4j/SLF4J across AWS microservices, creating React hooks for token management that reduced debugging time by 70%.
- Designed POCs and low-level design (LLD) documents to validate feasibility, led client demonstrations, and managed a team of 5 while mentoring them and contributing in SAFe Agile ceremonies to drive continuous improvement and ensure on-time delivery.

PROJECTS

Interactive RAG ChatBot using LangChain | *Python, LangChain, Chainlit, OpenAI, Chroma*

Aug 2024 – Nov 2024

- Engineered a chatbot for domain-specific Q&A using LangChain and Chainlit, building a retrieval-augmented generation (RAG) pipeline with prompt engineering and memory that achieved 90%+ accuracy in delivering context-aware responses to prompts.
- Incorporated OpenAI embeddings with the Chroma vector store for semantic search, leveraging LangChain loaders, RecursiveCharacterTextSplitter for chunking, and a RetrievalQA chain to process 100+ PDFs and slide decks into source-grounded outputs.

Music Playlist Migrator | *Spring Boot, React, Spotify API, YouTube API, GitHub Copilot, Jenkins*

Feb 2024 – Apr 2024

- Orchestrated a full-stack web app for migrating playlists between Spotify and YouTube, integrating REST APIs for authentication, playlist extraction and synchronization across platforms, synchronizing over 5k tracks with 98% success during testing.
- Provisioned OAuth 2.0 authorization for secure third-party API access and automated builds/testing with Jenkins CI/CD, reducing deployment effort by 80%.

CERTIFICATIONS

- Certified by Meta as Front End Developer.
- Certified in Machine Learning Internship by Codemania.
- Certified by Microsoft as Microsoft Technology Associate on Introduction to Python Programming.

EDUCATION

Texas Tech University *Lubbock, Texas*

Masters in Computer Science

Aug 2023 – May 2025

GPA - 4/4
