PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 3.5+ years of experience building scalable, high-performance applications. Proven track record in developing robust backend systems using Java, Spring Boot, Kafka, and multithreading, along with hands-on frontend experience using ReactJS and modern web technologies. Strong understanding of software design principles (SOLID, DRY, KISS), object-oriented design, and system architecture patterns such as microservices and event-driven design. Passionate about distributed systems, concurrency, and performance optimization.

EDUCATION

University of Cincinnati

Master of Engineering in Computer Science | GPA: 3.91/4

Cincinnati, OH

Aug 2024 – May 2025

Andhra University

Bachelor of Technology in Electrical and Electronics Engineering | GPA: 8.87/10

Visakhapatnam, India

Jun 2016 – Sep 2020

TECHNICAL SKILLS

Programming Languages: Java 21, JavaScript (ES6+), TypeScript, Python3, C/C++

Backend & Microservices: SpringBoot, Java EE, REST APIs, Node.js, Express.js, Kafka, JUnit, Selenium, Maven

Frontend Development: ReactJS, Redux, Jest, Next.js, HTML5, CSS, SASS, Bootstrap, Angular 16

Databases & Caching: SQL, PL/SQL, DB2, SQL Server, PostgreSQL, MongoDB, Elasticsearch, Redis

Cloud & DevOps: AWS (EC2, S3, Lambda, ECS), Terraform, CI/CD, Docker, Kubernetes, Jenkins, TeamCity, SonarQube

AI/ML: TensorFlow, PyTorch, scikit-learn, Statistical Concepts, Data Pipelines, Model Serving, MS Co-Pilot

Software Development Practices: Agile (Scrum), TDD, PostMan, GraphQL, Git, Jenkins, REST APIs, Bitbucket, JIRA, Object Oriented design

Key Skills: Data Structures and Algorithms, LLD, System Design Patterns, Operating Systems, Data Modeling, Unix/Linux

EXPERIENCE

Software Development Engineer (Technical Lead)

Jun 2023 – Jul 2024

Verizon, Hyderabad, India

(Contract: Tata Consultancy Services Limited)

- Took complete ownership of a full-stack migration (Canvas project) from JSP to ReactJS, and Spring Boot, obsessing over customer experience to reduce page load times from 4s to 1s—improving satisfaction and engagement.
- Reduced API latency by 98.75% (from 4s to 50ms) for 50k+ Verizon users through the strategic implementation of Redis caching and multi-threaded query processing, significantly improving application responsiveness.
- Envisioned and implemented a scalable Kafka-based event system processing 5K+ events/sec, reducing data processing time by 30% and paving the way for future enterprise-level growth.
- Led an Agile Scrum team of 6, mentoring junior engineers and raising the bar through code reviews and design sessions fostering growth while delivering 20+ critical fixes ahead of deadlines.
- Engineered a scalable microservice architecture with a focus on fault-tolerance, load balancing, and horizontal scaling.

System Engineer

Jan 2021 – May 2023

Verizon, Hyderabad, India

(Contract: Tata Consultancy Services Limited)

- Developed a Java Spring Boot application that used Selenium to web scrape ticket data from multiple inventory systems, seamlessly integrating the data into the database.
- Demonstrated frugality by automating ticket scheduling using crontab, eliminating manual work by 90% and saving \$50K annually freeing up engineering time for higher-impact tasks.
- Architected a dynamic RBAC framework with OAuth2.0 + JWT, securing sensitive data while enabling ownership of role-specific access controls.
- Delivered continuous enhancements in two-week sprints, ensuring operational excellence and consistently meeting the bar for on-time delivery.

PROJECTS

ShopVista - Scalable E-Commerce Platform | JavaScript, ReactJS, Java, Spring Boot, AWS, Kubernetes

- Engineered a distributed e-commerce system prioritizing customer trust and seamless experiences.
- Designed secure authentication with OAuth & JWT, emphasizing customer obsession and high standards.
- Implemented Redis caching, reducing database load and improving API response time by 40%.
