

Yusuf Masha

Cypress, TX | (832)-774-4697 | yusufmasha022@gmail.com

Summary

- A competent professional with over 8+ years of rich experience in Compute Infrastructure Management and Microsoft Azure Cloud (IAAS & PAAS).
- Hands on experience with Microsoft Azure Cloud services, Storage Accounts and Virtual Networks
- Experienced in Provisioning of IAAS & PAAS Virtual Machines and Web\Worker roles on Microsoft Azure Classic and Azure Resource Manager.
- Experienced in migrate an On - premises Instances or Azure Classic Instances to Azure ARM Subscription with Azure Site Recovery.
- Experience in Azure Fabric Services.
- Experience in full Software Development Life Cycle (SDLC) that includes Analyzing, Designing, Coding, Testing, implementation & Production Support as per quality standards using Waterfall, Agile methodology.
- Experience on various Azure services like Compute (Web Roles, Worker Roles), Azure Websites, Caching, SQL Azure, NoSQL, Storage, Network services, Azure Active Directory, API Management, Scheduling, Auto Scaling, and Power Shell Automation
- Expertise with creating Single Page Applications using Angular JS with MVC capability.
- Good Experience using Bootstrap for Responsive Web Design (RWD) and CSS media Queries using LESS / SASS.
- Experience of Databases that involve writing SQL queries.
- Extensive programming experience in developing Web based applications and Client-Server technologies using HTML, CSS, XHTML/DHTML & XML, DOM, JavaScript, jQuery, Ajax, AngularJS, NodeJS, JSON and Core Java.
- Able to effectively communicate with wide range of clients and coworkers.
- Capable of quickly learning and delivering solutions as an individual and as part of a team.

Technical Skill

- **Cloud Computing:** Microsoft Azure, AWS (IAAS, PAAS, SAAS).
- **Microsoft Azure:** Networking (VPN, Express route, UDR, NSG, Load Balancer, Firewalls), Compute, Storage, Azure Active Directory, OMS, Azure Site Recovery, Azure Backup, Azure API, Azure Services, SAN, NAS, SCOM, SCCM, Azure Security Center, Azure Monitoring and RBAC.
- **Operating System:** Windows, Linux, Unix, Mac OS X. (VMware and HyperV).
- **DevOps Tools:** Jenkins, Docker, Kubernetes, Terraform, Azure DevOps Chef,
- **Automation Tools:** Ansible Playbooks, PowerShell Playbooks, Azure CLI.
- **Azure Developing Tools:** PowerShell, Ansible, Azure CLI, Azure ARM Portal.
- **Databases:** MYSQL, MS SQL, Cosmos DB, Mongo DB, PostgreSQL
- **Version Controls:** Git Hub, SVN.
- **Programming Languages:** C, C#, .Net.
- **Web Servers:** IIS, HTTP Web Server, Apache Tomcat, WebLogic Application Server.
- **Web Technologies:** HTML/HTML5, CSS2/CSS3, LESS / SASS, XHTML, AJAX, JSON/XML, DOM, JavaScript, jQuery, Bootstrap, Angular JS.
- **Security:** Network Security, Networking, TCP/IP, Azure AD, ARM, Windows Hyper V, IPsec VPN, ExpressRoute, Load Balancer, Application Gateway WAF, AIP and Azure Migrate, Continuous Integration (Azure DevOps), Continuous Deployment (Azure DevOps), ExpressRoute, Load Balancer, Application Gateway, AIP, Azure Migrate, Office 365, API Gateway, Docker and Kubernetes.

Education

- **Bachelor of Science, Computer Science**
National Open University – Graduated December 2015

Certification

- **CompTIA Server +**
- **CompTIA Security +**
- **Linux Essential**
- **Microsoft Azure Administrator Associate**
- **Azure Security Engineer Associate**
- **AWS Certified Solutions Architect – Associate**
- **Microsoft Azure Solution Architect**

Professional Experience

Goldman Sachs Global Azure Cloud Engineer

Sep 2022 – Present

- Designed and Deployed Azure IaaS virtual machines (VMs) and Cloud services (PaaS role instances) into secure VNets and subnets.
- Setup a CI/CD pipeline that deploy an application to Azure Kubernetes Cluster
- Managed IP Forwarding for VMs and role instances acting as virtual appliances.
- Set up Azure Virtual Appliances (VMs) to meet security requirements as software-based appliance functions (firewall, WAN optimization, and intrusion detections).
- Optimized the bank's fraud monitoring solution using an AI/Machine Learning solution that checks customers' transactions, discovers trends in them, and makes decisions based on behavioral patterns.
- Associated routes with Virtual networks via the route table per relationship constraints.
- Used Azure Resource Manager (ARM) to deploy, update, or delete all the resources for your solution in a single, coordinated operation.
- Monitor Azure Infrastructure through System Center Operation Manager (SCOM).
- Manage and Create Storage Account and Affinity Group in Azure Portal.
- Interpret security and technical requirements into business requirements and communicate security risks to relevant stakeholders ranging from business leaders to engineers.
- Configure rules for real-time alerting in SIEM tool (Microsoft Sentinel/IBM QRadar) for events, a
- Provide Operational support for Security Operations related activities that can include, but not limited to; Creating queries for specific audit reports based on auditable events criteria, using/configuring/managing Azure Sentinel and MDATP.
- Participate in incident response training, Cloud security review, and regulatory compliance.
- Automated the release pipeline to achieve zero-touch deployments using Jenkins, Ansible, and Docker.
- Setting up Azure Active Directory permissions for the Team and managing all infrastructure support services
- Troubleshooting of Windows and Linux Virtual Machines.
- Gather, review, and validate network requirements, on-prem networks, VNets, and network security groups.
- Troubleshooting of Layer 4/7 Load Balancers (Application Gateway WAF) with SSL and web pages running behind it.
- Working and Maintaining the Group Policy infrastructure based on the policies and guidelines provided.
- Created event-driven Web Forms using ASP.NET and implemented form validation using Validation controls using both Custom validation and JQuery written for Client-side validations.
- Work in a highly secure environment using RSAT tools.
- Assist in the management and support of internal and external DNS systems. Assist in the management and support of internal DHCP architecture and scoping.
- Managed the IAM role and policies for users within the environment for access to the cloud infrastructure.
- Selecting appropriate Cloud services to design and deploy an application based on given requirements and migrating complex, multi-tier applications on Cloud Platforms as needed.
- Set up monitoring using Grafana, Application Insights, and Azure Monitor to ensure proper monitoring of the cluster.
- Work through the development and testing of disaster recovery and high availability plans to ensure resilience and continuity of services in any scenario.
- Integrate and monitor the foundations of Azure to effectively communicate with users when systems or Azure services are experiencing downtime, ensuring transparency and minimal disruption.

GE Health Cloud Engineer

Dec 2019 – Aug 2022

- Initiated the design and development of Infrastructure and Application workloads using Azure IaaS and PaaS services such as Azure App Services, Virtual Machine Availability Sets, Virtual Machine Scale Set, Function Apps, Logic Apps, and Azure DevOps.
- Utilized automation tools such as Terraform and Ansible, for automating deployments, monitoring, management, and incident response for the platforms.
- Set up repos on Azure Git, merging code from the develop branch to master branch and make it ready for deployment.
- Managing and troubleshooting M365/O365 application (Exchange Online and SharePoint Online)

- Proven experience in working on Azure environments & its offerings (PaaS, SaaS or IaaS), PowerShell, Load balancing, Firewall, and DNS.
- Configuration/Debugging of VPN Tunnels (Site to Site/Point-to-Site connections)
- Uses Wireshark/Network Monitor to find potential issues.
- Integrate applications with the OKTA identity provider. Setting up SAML, OIDC implementation with OKTA
- Created dashboards in VSTS for CI/CD pipelines, Work items, and bugs.
- Developed microservice onboarding tools leveraging Python and Jenkins allowing for easy creation and maintenance of build jobs and Kubernetes deploy and services.
- Managed Kubernetes charts using Helm. Created reproducible builds of the Kubernetes applications, managed Kubernetes manifest files, and Managed releases of Helm packages.
- Designed and configured Azure Virtual Networks (VNETs), subnets, Azure network settings, DHCP address blocks, DNS settings, and security policy and routing.
- Migrated application from RSA SecurID to use Azure SSO and OKTA IDP
- Provided support to end users, on any Identity and Access issues relating to OKTA, and Azure. Incidents are logged via ServiceNow.
- Migrating virtual environments from VMWare to Azure cloud using ASR.
- Performed builds, code changes, installation procedures, and systems including source code control and issue tracking while utilizing VSCode software.
- Assisted with branching/merging in support of parallel development requirements.
- Monitored usage and changed configurations to improve the capacity or performance of servers.
- Provided collaboration systems support that includes the full range of lifecycle management system engineering, development, testing, and implementation services, as needed and as directed by the agency to provide effective and efficient operations of the O365 platform.
- Designed, developed, and maintained business enterprise solutions as mobile, windows, web, or distributed applications.
- Using Terraform to create a staging environment and destroy the same after application testing to manage Azure cost.
- Configured VMs availability sets using Azure portal to provide resiliency for IaaS-based solutions and scale sets using Azure Resource Manager to manage network traffic.
- Build out comprehensive training plans for internal and external teams at various skill levels to ensure up-to-date knowledge of Azure services and best practices in cloud architecture.
- Conducted application code reviews and open-source software evaluations using code checkmarx.
- Regularly meet with stakeholders to understand their requirements and demands, translating business needs into technical solutions within the Azure cloud environment.

Verizon Wireless Systems Azure Cloud Engineer

Jun 2016 – Nov 2019

- Drive end-to-end deployment of Various Components on the Azure Platform
- Developed PowerShell scripts and ARM templates to automate the provisioning and deployment process.
- Configured VM networking with reserved IPs, Health Monitors, Firewall rules, VM scale sets, and availability sets in the Azure Cloud.
- Developed Ansible to manage Web applications, Environments configuration Files, Users, Mount points, and Packages. Implemented Continuous Integration using Jenkins and GIT
- Deployed VNETs and Site-Site VPN using PowerShell and deployed VMs into various Subnets and enabled communication between Subnets.
- Deployment of Applications in Azure App service.
- Manage deployment automation using Terraform to system operations.
- Knowledge of Source Code Management (version control system) tools like Git.
- Created and supported application deployment pipelines that are automated and reliable using Azure.
- Configured VMs availability sets using Azure portal to provide resiliency for IaaS-based solutions and scale sets using Azure Resource Manager to manage network traffic.
- Assist with managing, maintaining, monitoring, and securing (including data security) of all servers including installations, upgrades, patches, and documentation.
- Develop stateless RESTful API for multiple clients, web, single page applications, mobile applications etc.
- Implement coding standards and refactoring to ensure flawless code.
- Built APIs with Node.js, Express, MongoDB, Mongoose, GraphQL

- General configuration of Phase 1 and Phase 2 for VPN Tunnels from Checkpoint, Fortigate, Barracuda, and Palo Alto firewalls.
- Deploy Azure resources using Azure ARM deployments / Automation / Azure CLI / PowerShell / DSC/Bash/Portal
- Replicated VMware VMs to Azure with Site Recovery.
- Installed and configured IIS web server on Microsoft Windows 2012/2012R2 /2016 server accordingly
- Securing Azure Infrastructure using Azure Security Solutions; Azure Sentinel, Azure Application Gateway, Front Door, NSGs, Azure Firewall, and WAF Firewall Policies and Monitoring Infrastructure wide Security using Azure Security Centre
- Perform hands-on activities involved in creating cloud infrastructure components.
- Used PowerShell Scripting and automation to move workloads and improve operations and support.
- Troubleshoot pod and other cluster issues on a Kubernetes Cluster
- Implementing and Managing Docker and Kubernetes infrastructure and working on Worked in DevOps group running Jenkins in a Docker container.
- Point of contact for technical escalations within the Azure Networking Team.
