Atlanta, Georgia | +1 (513) 505 - 4285 | harshitha.banda@aogjob.com | [LinkedIn](#)

SUMMARY

Experienced Java Backend Developer with 5 years of expertise in building scalable, high-performance microservices and cloud-native architectures. Proficient in Spring Boot, REST APIs, and AWS (Lambda, ECS, RDS, ElastiCache, DynamoDB), with a strong focus on event-driven systems using Kafka. Skilled in database optimization, CI/CD pipelines, and security best practices, ensuring efficient, resilient, and secure applications. Passionate about developing fault-tolerant distributed systems, reducing downtime, and improving overall system reliability.

TECHNICAL SKILLS

Programming Languages: Java (Core & Advanced) | Python | SQL

Frameworks & Libraries: Spring Boot | Spring MVC | Spring Security | Spring Batch | Hibernate | JUnit | Mockito

Cloud & DevOps: Lambda | ECS | EKS | API Gateway | RDS | ElastiCache | S3 | DynamoDB | Secrets Manager | CloudWatch | Step Functions | Jenkins | AWS CodePipeline | Docker | Kubernetes

Databases: MySQL | PostgreSQL | MongoDB | Cassandra | DynamoDB

Microservices & Architecture: RESTful & SOAP APIs | Event-Driven Architecture | Serverless Computing | Kafka (Message Queue & Streaming) | Load Balancing & Auto-Scaling

Security & Compliance: OAuth | JWT Authentication | Strong Customer Authentication (SCA) | Tokenization | Encryption

Software Development & Tools: IntelliJ IDEA | Eclipse | Git | GitHub | Bitbucket | Agile & Scrum Methodologies

WORK EXPERIENCE

Java Developer

Optum | Remote | Oct 2023 – Dec 2024

- Developed and optimized scalable microservices using REST APIs, implementing load balancing and auto-scaling with AWS (ECS, Lambda, API Gateway, EKS, RDS, ElastiCache, Secrets Manager), improving system resilience and maintainability.
- Integrated AWS S3 with pre-signed URLs, enhancing file-sharing efficiency for clients. Utilized AWS CloudWatch for monitoring, reducing issue resolution time by 10%.
- Refactored legacy codebases for improved observability and fault tolerance, enforcing standardized design patterns, which led to a 50% decrease in critical incidents during version upgrades.
- Developed serverless workflows using AWS Step Functions and Lambda, reducing operational overhead and increasing efficiency by 20%.
- Designed and implemented caching mechanisms with AWS ElastiCache (Redis), reducing API response times by 30% and improving overall system performance.

Software Development Engineer

Amazon | Seattle, WA | May 2022 – Aug 2023

- Spearheaded a full-stack feature enabling bulk purchases of entire book series (30+ books) on Amazon Bookstore, enhancing the customer purchasing experience.
- Designed and developed scalable SOAP & REST API endpoints, addressing product functionality gaps, leading to a 70% reduction in support tickets.
- Revamped the UI with modern design principles (micro-interactions, flat design), cutting user training time by 40%.
- Improved unit test coverage to 85% using JUnit and Mockito, reducing production defects.
- Implemented CI/CD pipelines using AWS CodePipeline and Jenkins, reducing deployment time by 50% and enhancing release efficiency.
- Led code reviews and mentorship sessions for junior developers, increasing team efficiency and ensuring adherence to best coding practices.

Software Developer

Sigma InfoTech | Bangalore, India | Mar 2021 – July 2021

- Developed instant digital payment solutions for retail banking and financial services, enabling a 5x improvement in transaction processing speed.
- Designed and built AI-based fraud detection algorithms that reduced chargeback fraud cases by 45%.
- Implemented Kafka-based event-driven architecture, ensuring high availability and fault tolerance in financial transactions.
- Developed cloud-native microservices for banking operations, increasing application scalability by 40%.
- Built a serverless payment reconciliation system using AWS Lambda & DynamoDB, reducing operational costs by 30%.

- Integrated NoSQL databases (MongoDB, Cassandra) for real-time transaction processing, reducing read/write latency by 60%.
- Optimized SQL queries and indexing strategies, reducing database query execution time by 70%.
- Implemented SCA (Strong Customer Authentication) and tokenization, improving payment security compliance.

Associate Software Engineer

Accenture | Hyderabad, India | Nov 2018 – Feb 2021

- Achieved 98th percentile in Accenture Greenfield Training, covering Core Java, Advanced Java, Databases, Web Technologies, and Accenture tools & methodologies.
- Developed customer transaction history retrieval services for a leading banking client using Spring MVC and Hibernate, boosting query performance by 85%.
- Designed and implemented role-based authentication and authorization using Spring Security, improving system security and access control.
- Refactored monolithic applications into modular components, enhancing scalability and maintainability.
- Optimized SQL queries for large datasets, reducing database response time by 40% and improving overall application performance.
- Built and deployed batch processing jobs using Spring Batch, automating financial transaction processing, reducing manual efforts by 60%.
- Collaborated with cross-functional teams (developers, testers, business analysts) to ensure seamless integration and delivery of banking solutions.
- Provided production support, debugging and resolving critical real-time banking transaction issues, reducing downtime by 30%.
- Integrated Kafka for event-driven messaging, improving data synchronization across distributed systems and enhancing real-time data processing.
- Led technical training sessions for new hires, reducing onboarding time by 40% and ensuring efficient team knowledge transfer.

EDUCATION

Master of Science in Computer Science

University of Cincinnati

May 2022

Ohio, USA

Relevant courses: Cloud Computing, Machine Learning, Advanced Data Structures & Algorithms

Bachelor of Technology in Computer Science Engineering

G. Narayanamma Institute of Science and Technology

April 2018

Hyderabad, IN

Relevant courses: Database Management Systems, Data Structures & Algorithms, Operating Systems, Computer Networks, OOP using Java.

PROJECTS

Automation Reporter – AWS-based Reporting Tool

- Designed and implemented an automated reporting tool leveraging AWS services for data extraction, storage, and visualization.
- Developed a Python-based parser to process data from JSON files and store structured information in Amazon DynamoDB.
- Utilized AWS Lambda as a connector for event-driven processing and Athena for querying stored data efficiently.
- Designed interactive dashboards in Amazon QuickSight to visualize and present key insights from the processed data.

SecureCloud API Service | Spring Boot, Java 17, MySQL, Google Cloud, Terraform, CI/CD, Python

- Developed a cloud-based SecureCloud API with RESTful services, ensuring 99.9% uptime and secure user authentication with email verification.
- Automated infrastructure deployment on Google Cloud using Terraform (IaC), reducing manual provisioning by 80%.
- Integrated CI/CD pipelines with GitHub Actions, streamlining deployments and cutting manual efforts by 70%.
- Built a serverless AWS Lambda function in Python for email notifications and optimized database queries using Hibernate, improving performance by 35%.
- Implemented structured logging with Log4j, enhancing debugging efficiency and reducing application downtime by 40%.
- Utilized Packer to automate machine image creation, reducing provisioning time by 50% and improving infrastructure efficiency.
