

Gundam Bhanuvardhan Reddy

RPA Developer

bhanu@vinsumsoft.us | +1 (434) 213-0052 | Work Authorization: OPT

PROFESSIONAL SUMMARY

- Overall 3+ years of IT Experience along with experience in multiple projects on the Robotic Process Automation using UiPath.
- Experience in building RPA (Robotic Process Automation) solutions using UiPath.
- Well Versed in all phases of the (SLDC) System Development Life Cycle from the investigation of initial requirements through analysis, design, development, implementation and document support.
- Experienced in determining RPA best practices and suggests how to improve current quality processes, standards and practices.
- Created RPA structure and team along with production support, designed and developed RPA solutions to accelerate business processes.
- Involved in Process Automation collaborations with business users globally to analyze business processes, recommend RPA-based solutions for the process, and develop robots using UiPath.
- Worked on UI elements, Data Scrapping, Selectors, PDF, Image and Text Automation, Citrix, and mainframe in Ui Path studio.
- Experience in Robotic Process Automation Tool in UiPath to automate web applications, desktop applications, Excel Automation, Image Recognition, PDF Integration, OCR, etc.
- Expertise in developing Excel VBA Macros and used for automating excel spreadsheets. Hands-on experience in Advanced Excel.
- Experienced in the development of Test Plans, Test Cases.
- Expertise in creating Automation tasks in minutes, record keystrokes and mouse clicks and use easy point and click wizards in UiPath.
- Good knowledge and understanding of SQL and PL/SQL. Experience in working with databases like SQL Server and MySQL.
- Develop robots using UiPath, identifying and debugging the errors using error Handlers.
- Part of RPA Capability is to look after all the issues that occur along different processes and assist developers in resolving issues.
- Automated tasks using web recording and scheduled tasks to repeat as per requirements.
- Planned and organized testing phases including Unit testing and Integration testing, writing test cases, generating tests scripts, and reviewing test results, taking corrective actions, Bug Analysis, and fixing it.
- Experienced in working with business stakeholders in understanding process automation needs and document technical requirements for Robotics Process Automation.
- Performed tool evaluation and feasibility to heal pin selecting suitable automation tool for RPA implementation.
- Skilled at assessing client needs, working in a group, and supporting end users.
- In-Depth knowledge of design and architect web-based solutions.
- Strong logical and problem-solving skills.

- Multi cultured Team Player with complete flexibility to work independently as well as in a team and have quick grasping capabilities to work with newly emerging technologies.

TECHNICAL SKILLS

Automation Skills:	UiPath
RPA Tools:	UiPath
Webservices:	Web Sockets
Cloud based Technologies:	Microsoft Azure.
Databases:	SQL
Programming Languages:	Python, HTML, C
Cloud Technologies:	AWS

WORK EXPERIENCE

RPA Developer

Client: Cigniti Technologies

Jan 2024 – July 2024

Responsibilities:

- Worked with Business Analysts to Prepare Process Definition.
- Knowledge on Document (PDD) and Solution Design Document (SDD).
- Designing UiPath process solutions in accordance with standard UiPath design principles and conventions.
- Implemented UiPath features such as Optical character recognition (OCR), Image Recognition, Text Analysis, Database Integration, PDF processing, Excel Integration, Email Automation etc.
- Supporting the Operational Teams during the UAT and rollout phases.
- Document each unit test case, functional validation for production change request.
- Providing postproduction and hyper care support.
- Provided expert level guidance to users to develop attended automations.
- Educated SMEs to work with BOTS in production.

RPA Developer

Client: Verizon

June 2023 – Dec 2023

Responsibilities:

- Designed Automated Solutions using UiPath robotic process automation platform.
- Created database connections to fetch the data and automated the process to arrange data.
- Automated tasks using web recorder and scheduled tasks to be repeated as per requirements.
- Performed tool evaluation and feasibility to help in selecting suitable automation tools for RPA implementation.
- Utilized various UiPath Activities such as Excel Integration, Database activities, APIs, SharePoint Activities, Data Scraping, Queue Activities, OCR, keystrokes, Error handling, Try catch etc.

- Used UiPath selectors to store the attributes of a graphical user interface element and its parents, in the shape of an XML fragment.
- Automated process for various PDF documents, invoice and scanned documents.
- Used data scrapping method for extracting structured data from browser applications or documents into CSV file or Excel spread sheet.
- Maintained the several RPA bots as batch processes on a daily basis and ensured quality and high performance to the internal and vendor applications of the organization.
- Automating data transfers, including importing/exporting data between applications or files.
- Worked on automating email activities to send email reports and errors.
- Good communication skills, knowledge of the RPA process and can identify new processes if needed.
- Developed and documented configuration best practices to create and maintain solution documentation.

RPA Developer

Client: Verizon

Jan 2023 – May 2023

Responsibilities:

- Developing forms using Queries and front-end designing.
- Extensively used commands like Keystrokes, Mouse clicks, Open program/files, Files/Folders, window actions, Log to file, Loops, System, Delay and Interactive.
- Developed robotic bots using UiPath to automate manual, repetitive, rule base and high-volume processes.
- Involved in Desktop Application Integration Automation like Excel, MS Word, Notepad and PDF.
- Effectively used string commands, Excel Commands, PDF Operations, Metablogs, Decision Rules, Loops and Variable Operations for performing various functions.
- Resolving the automation related issues, testing support for applications & preparing test case documents, responsible for holding the Client Data, and successful setup delivery of the product with UAT testing End to End Testing.
- Resolving issues and escalations raised by the clients ensuring utmost client satisfaction.
- Meet the business client team, gather and understand requirements and functionality to provide solutions to end users.
- Contribute to an atmosphere of cross-functional teamwork within the organization's emerging Agile delivery lifecycle using CI/CD.
- Develop, Maintain and support a Continuous Integration framework based on Jenkins.
- Provide estimations, track project progress, and make changes if required throughout the software development life cycle.
- Work with business stakeholders, project managers, business analytics, software developers, data managers, peer organizations, quality assurance and technology

Multiple Projects –

- Developed Innovative automation solutions using UiPath.
- Automated web searches and data extraction and real-time information.
- Created user interface for seamless data input.
- Engineered workflows for simultaneous data entry in multiple platforms.

- Implemented decision-making logic for automated recommendations.
- Utilized dynamic selectors for reliable data scraping across web pages.
- Incorporated robust error handling and retry mechanisms.
- Ensured data accuracy through rigorous testing and validation.
- Enhanced automation performance by optimizing UiPath activities and selectors.
- Integrated user feedback to refine and improve automation processes.

Academic Projects –

Breast Cancer Analysis and Prediction - The project focuses on breast cancer analysis and prediction. It begins with EDA to understand key dataset features and employs PCA to reduce dimensionality. Machine learning algorithms, including Logistic regression and Grid search CV are utilized to build accurate prediction models.

Housing Data Analysis - Conducted comprehensive data analysis of housing data using python, including in-depth examination of both numerical and categorical features. Proficiently handled discrete and continuous numerical data, addressing outliers, and performed essential feature scaling to enhance model performance additionally used SQL for data query and Power BI for advanced data visualization for in-depth analysis.

- **File Seeker** - Developed a versatile file search and manipulation program in C, featuring recursive directory traversal, metadata retrieval via stat(), and execution of Unix commands on target files. Demonstrated strong expertise in file systems, operating systems, and C programming.
- Built a web-based file upload tool that seamlessly integrates with AWS services. Users can upload files to an Amazon S3 bucket, and file details are automatically sent to designated email addresses using Amazon SES for efficient communication and data management.

Internship Experience –

Data Scientist Intern

Company – Tech Hub

Aug 2020 – May 2021

Veriscripts is a web-based application. The main motto of the application is that a student can seek transcripts or certificates through a digital platform.

Involved Under Various Tasks:

- WebScraper, ScrapeSimilar extracted data using these extensions from responsive websites and converted those scraped data to proper CSV format
- Power BI is a software tool used for data analysis. I have uploaded a scrapped excel sheet in power bi did some visualizations and came to few conclusions about the project.
- I have worked on both frontend and backend applications on this project. For the backend, we used Microsoft SQL server management studio. For the front end, we used HTML and CSS for the UI designs

EDUCATION

Master's in computer science in University of Alabama Birmingham [GPA – 3.6]s
