Summary of Qualifications

As a Pega Senior System Architect at SoftServe, bringing over 10 years of experience in software development, I specialize in delivering enterprise-grade applications using the Pega platform. My recent contributions include designing and implementing a shared services application for a logistics services organization, where I focused on case type design, data modeling, and integration with REST APIs.

Previously, I contributed to digital transformation initiatives, including SAP integration, RPA, and vendor onboarding for clients in the music and healthcare industries. My work includes creating reusable components for address validation and error visualization systems. Known for my collaborative mindset, I empower teams by sharing techniques, coaching, and custom resources to streamline complex business processes. My mission is to craft scalable solutions that address intricate challenges across industries.

Skills

Programming Languages/Technologies

- Pega Platform
- Pega Constellation
- Pega Customer Service
- HTML/JavaScript/CSS
- PHP
- Java
- C#
- RESTful Web Services
- React

RDBMS

- MySQL
- PostgreSQL
- SQLite

Frameworks

- .NET Framework

Development and Other Tools

- Git
- Bash
- Cisco Networking

Methodologies

- Agile, Scrum

Operating Systems

- Microsoft Windows
- Linux

Experience

Senior Platform Engineer – SoftServe (July 2023 – Present)

Shared Services Application for Security Services Organization

Project Description:

A shared services application that facilitates the management of post orders, invoices, and personnel actions. Users access the platform through the website interface using their organization credentials (SSO). The project is built on top of Pega Platform.

Customer:

US Company

Involvement Duration:

10 months – present

Project Role:

Pega Senior System Architect

Responsibilities:

- Application design: case types, data model.
- Develop integrations with the organization's REST APIs.
- Develop custom file upload that integrated with the organization's IA tools used to validate the file contents.
- Fixed UI issues and ease the performance of tables used to fill/display information.

Project Team Size:

6 team members

Tools & Technologies: Pega Platform, Postman

Senior Pega Engineer – Hoverstate (May 2020 – July 2023)

Pega Platform for Financial Organization

Project Description: A platform that facilitates the yearly medical plan renewal for employees in Kansas. Pega is used to create a single case which encompasses employees, dependents and the medical plans and costs selected. Users access the platform through the website interface. The project is built on top of Pega Platform.

Customer: US Company

Involvement Duration: 6 months

Project Role: Pega Senior System Architect

- Responsibilities:**
- Modernize the existing application, converting legacy data types.
 - Fixed legacy UI issues and improved performance.
 - Configure data used to enable 2025 plan renewals.
 - Documentation of changes and the use of new data types.

Project Team Size: 3 team members

Tools & Technologies: Pega Platform

Pega Customer Service for Healthcare Organization

Project Description: A platform that facilitates medical information retrieval, encompassing details about providers, patients, and facilities. Pega is used to create interactions and process medical information. Users access the platform through the website interface using their organization credentials (SSO). The project is built on top of Pega Customer Service and Pega foundation for healthcare.

Customer: US company

Involvement Duration: 1 year and 6 months

Project Role: Pega Senior System Architect

- Responsibilities:**
- Configure Pega Customer Service and lay out the foundation for the new application.
 - Configure interactions that support custom service request types.
 - Help design the data model that correctly inherits from the Pega foundation for healthcare.
 - Documentation of the application design, architecture, application stack, and relevant rules.
 - Created a reusable component for address validation using Smarty US Street Address API

Project Team Size: 8 team members

Tools & Technologies: Pega Platform, Pega Customer Service

Pega Customer Service for Global Media Group

Project Description: A platform that provides a shared services hub for onboarding vendors, customers, inquiries, and transfer requests. The system provides integration with the organization's SAP for vendor and customer functionality and custom integration for transfer requests through Pega Robotic Automation. The project is built on top of Pega Customer Service.

Customer: US company

Involvement Duration: 3 years

Project Role: Pega Senior System Architect

Responsibilities:

- Configure Pega Customer Service (CS), including interactions and chatbot.
- Participate in building a Pega CS application from the ground up.
- Integrate Pega Knowledge with the Pega CS application.
- Use Pega capabilities to integrate with external systems and APIs.
- Use Pega Robotic Automation to integrate with external systems.

Project Team Size:

6 team members

Tools & Technologies:

Pega Platform, Pega Customer Service, Pega Robotics

Senior Pega Engineer – Rulesware (June 2013 – March 2020)**Pega Marketing for Financial Institution****Project Description:**

A platform that uses Pega customer decision hub capabilities to predict which bank products – e.g., credit cards, loans, etc. – are most suitable for a customer. The project is built on top of Pega Marketing.

Customer:

US company

Involvement Duration:

8 months

Project Role:

Pega Senior System Architect

Responsibilities:

- Understanding Next-Best-Action Designer version 2, including taxonomies, constraints, engagement criteria, etc.
- Implementing custom strategies to deliver action eligibilities that meet the Client's business requirements.
- Understanding how to simulate adaptive models that calculate the propensity for a customer to accept a given proposition.

Project Team Size:

8 team members

Tools & Technologies:

Pega Marketing

Pega Training – Food Order App**Project Description:**

Pega application for training that encouraged students to put into practice many of the core Pega concepts and tools, like Data pages, use of data transforms, case lifecycle, personas, use of clipboard, tracer, etc.

Customer:

US company

Involvement Duration:

6 months

Project Role:

Pega Senior System Architect

Responsibilities:

- Participate in meetings to define goals and expectations.
- Create an agenda to meet those goals and deliver successful training.
- Create Exercises where new team members can practice essential Pega concepts.
- Become a Product Owner/ LSA in the internal project designed to give new team members real-life insights.
- Deliver support to training participants.

Project Team Size:

8 team members

Tools & Technologies:

Pega Platform

Disputes System for Financial Institution**Project Description:**

A platform that can process disputes through three stages: Chargeback, Pre-arbitration, and Arbitration. Disputes can be raised in the front-end (worked by a different team) for various reasons, for example, non-authorized transactions. The system provides a SOAP API. The project is built on top of the Pega Smart Dispute Framework.

Customer:

US company

Involvement Duration:	4 years
Project Role:	Pega Senior System Architect
Responsibilities:	▪ Develop parts of the custom access roles and permission system for teammates (CSR). ▪ Develop parts of the general capabilities for changing the dispute's reason code. ▪ Develop parts of the general capabilities for correcting Money Movement errors during the dispute case's processing. ▪ Develop parts of the custom unified event notifications for the dispute case lifecycle, sending IPN, IDI, and Webhooks notifications through the Client's General Enterprise Messaging System (GEMS). ▪ Migrate parts of the Client's custom integration framework to a new framework integration with Pega.
Project Team Size:	10 team members
Tools & Technologies:	Pega Platform, Pega Smart Dispute

Localization for KYC Application

Project Description:	Provide localization of the company KYC application for different locales, including Japan, Germany, and Mexico. The project is built on top of the Pega platform and leverages the Pega Localization wizard to localize most of the application.
Customer:	US company
Involvement Duration:	1 year
Project Role:	Pega Senior System Architect
Responsibilities:	▪ Develop a side project for batch upload of field values for localization rulesets.
Project Team Size:	8 team members
Tools & Technologies:	Pega Platform, Pega Localization

E-Learning Project Coordinator - Avianca (January 2009 - January 2013)

Taca Online Training

Project Description:	E-learning platform that enables airline maintenance technician personnel to take aviation regulatory compliance courses. Users can access the system through the website interface. The project is based on Moodle LMS.
Customer:	Central American company
Involvement Duration:	4 years
Project Role:	Project Coordinator
Responsibilities:	▪ Introducing the use of multimedia (audio, video, animations, and quizzes) in regulatory courses for aviation maintenance technicians and other airline personnel. ▪ Administration of the Learning Management System (Moodle). ▪ Creation of job aids for maintenance personnel.
Project Team Size:	1 team member
Tools & Technologies:	Moodle LMS, SCORM, Adobe Flash

Web developer - Wise Digital Media (July 2007 - January 2009)

Radio Inbox

Project Description:	Web application that enabled local radio DJs to send and read short 140-character messages. Registered users can also read and post messages. Users access the service through the website interface. The project is based on a custom Java routing interface with a PHP frontend.
-----------------------------	--

Customer: Involvement Duration: Project Role: Responsibilities: Project Team Size: Tools & Technologies:	Central American company 1 year 6 months Front-end Web Developer - Design and develop web applications that use short text messaging (SMS). - Design of user interfaces and multimedia objects for the web. - Improved application's performance when handling hundreds of text messages allowing the user to reply to multiple messages at the same time. 4 team members PHP, JavaScript, CSS, HTML
