EDUCATION

University At Albany

Master of Science in Computer Science, **GPA: 3.57**

Dec 2021 – Dec 2023

Albany, NY

PES University

Bachelor of Technology in Electrical and Electronics Engineering, **GPA: 8.00**

July 2016 – June 2020

Bangalore, India

RELEVANT COURSEWORK

- Data Structures
- Database Management
- Operating Systems
- Computer Networks
- Cloud Computing
- Artificial Intelligence
- Software Testing

TECHNICAL SKILLS

Languages: Python, Java, C/C++, JavaScript, SQL, PL/SQL.

Web Development: HTML, CSS, jQuery, Tailwind CSS, Node, Express.js, React.js, Spring MVC, Spring Boot.

Databases: SQL Server, MySQL, PostgreSQL, MongoDB, DynamoDB, Elastic Search.

Technologies/Tools: AWS, GitHub, GitLab, Xunit, Moq, JUnit, SpecFlow, Hibernate, Jira, Jenkins, PCF, Docker, Kubernetes, Grafana, Splunk.

EXPERIENCE

Carbyne

Software Engineer

Jan 2024 – Present

New York, USA

- Refactored existing code and delivered new Change Requests for the ongoing live application, which is developed using Spring Boot, Spring Batch, Spring JPA, and Spring Web Services.
- Optimized the system's database performance by implementing Hibernate ORM and MySQL, resulting in a 35% improvement in data retrieval time.
- Implemented Spring Security with JWT to enforce role-based access control and ensure the security of sensitive data.
- Designed and developed UI screens using HTML, CSS, Bootstrap, JavaScript, and ReactJS that meet accessibility and web browser standards for the website.
- Improved the system's scalability and availability by implementing Docker and Kubernetes for containerization and orchestration of services, resulting in 99.9% uptime.

Groovy Web

Software Engineer

Aug 2020 – Nov 2021

Nadiad, India

- Enhanced existing e-commerce platform by developing new REST APIs and features using Java and Spring Boot, increasing internal service integration efficiency by 50%.
- Created and integrated Grafana dashboards into a React diagnostic application for advanced monitoring of service logs, the tool is now leveraged by over 10 engineers, facilitating real-time performance tracking.
- Implemented Redis caching with smart cache invalidation, reducing database queries by 40% and improving response time by 20%, with 99.9% cache freshness.
- Developed and maintained order management features, optimizing responsiveness with MongoDB and Elasticsearch.
- Achieved comprehensive test coverage with BDD scenarios in Cucumber for diverse products, ensuring alignment with business needs. Implemented JUnit and Mockito for unit tests, achieving a 90% code coverage.
- Improved GET request processing by 25% with gRPC services. Orchestrated Kubernetes deployments using GitLab CI/CD for seamless integration.

PROJECTS

Image Classification utilizing AWS as a Service (IaaS) | AWS EC2, AWS SQS, AWS S3, Cloud Watch, Flask

- Designed and deployed a scalable cloud-based image recognition service using AWS Infra as a Service (IaaS) resources, such as AWS EC2 for model deployment, AWS S3 for storage, and AWS SQS for auto scaling.
- Implemented multi-tiered architecture in Python Flask to enable efficient processing and automatic scaling based on queue size using AWS EC2 instances, resulting in an elastic end-to-end application.

Keeper App | React, Node, Express, Bootstrap, Passport, MongoDB

- Designed and implemented a full-stack web application, Keeper App, utilizing ReactJS for front-end development and a MERN (MongoDB, ExpressJS, NodeJS) stack for back-end development.
- Incorporated secure authentication and session management using Passport JS, resulting in a streamlined user experience for creating and maintaining notes within the application.
