SUMMARY:

- Over 6 years of professional experience as a Java/J2EE developer, specializing in RESTful and SOAP web applications.
- Extensive experience in domains such as financial services and e-commerce.
- Proficient in the entire Software Development Life Cycle (SDLC), including analysis, design, prototyping, development, testing, implementation, and maintenance.
- Expertise in Object-Oriented Programming (OOP) using Core Java and J2EE technologies like Spring, Hibernate, MyBatis, JSP, JSTL, JMS, ActiveMQ, and Servlet.
- Skilled in implementing design patterns such as MVC, Singleton, Factory, Proxy, Decorator, Adapter, and Observer.
- Proficient in Service-Oriented Architecture (SOA) with experience in creating RESTful and SOAP web services using WSDL, XML, XSD, UDDI, SOAP UI, JAX-WS, JAX-RS, and Jersey framework.
- Hands-on experience in Test-Driven Development (TDD) using JUnit and Karma, Slenium.
- Developed responsive and dynamic front-end applications using React.js, ensuring seamless user experiences with reusable components and React Hooks.
- Integrated Angular.js with RESTful APIs facilitating communication between front-end components and back-end services built with Java Spring Boot.
- Optimized Kafka clusters to ensure high availability, fault tolerance, and low latency, contributing to improved system performance and uptime for the banking portal.
- Developed and executed Unix-based test scripts for application testing and validation, ensuring high software quality and reliability.
- efficient state management, reusable components, and seamless integration with back-end services.
- Developed custom Kafka connectors to facilitate data synchronization between legacy systems and modern data platforms, ensuring data consistency across the organization.
- Integrated AWS services such as Amazon RDS and S3 with applications deployed on AWS ROSA, ensuring seamless data access and storage capabilities.
- Configured and managed cloud resources using AWS ROSA to leverage Red Hat OpenShift's features for better orchestration, load balancing, and application lifecycle management.
- Expertise in database development and tuning using SQL, PL/SQL, and implementation for RDBMS like MySQL, Oracle, PostgreSQL, and NoSQL databases like MongoDB, DynamoDB, and Cassandra.
- Developed and deployed enterprise-level Java applications on IBM WebSphere Application Server, ensuring robust performance and high availability for critical business operations.
- Skilled in front-end web development using HTML, CSS, JavaScript, AJAX, jQuery, Bootstrap, JSON, AngularJS, and XML.
- Deployed and managed microservices architecture using Kubernetes, automating container orchestration for efficient scaling and deployment in various environments.
- Proficient in developing single-page applications (SPA) using the MEAN stack (MongoDB, Express, AngularJS, and NodeJS).

- Experienced in configuring and deploying AWS cloud technologies such as EC2, S3, Elastic Beanstalk, RDS, DynamoDB, Lambda, EMR, API Gateway, CloudFront, SNS, SQS, and SES.
- Skilled in version control using Git and SVN, and continuous integration with Jenkins.

TECHNICAL SKILLS:

- **Languages:** Java 1.7/1.8, PL/SQL, SQL, UML 2.3, ECMAScript, TypeScript
- **Java Technologies:** J2EE, Servlets 3.1, JSP 2.1, JSF 2.2, JDBC 3.0, JavaBeans, Web Services (SOAP, WSDL, REST 2.0), Apache Kafka, AWS, XML, JSON, JMS, Spring Batch, Spring Cloud, Spring Boot, Spring Framework, Hibernate, JDBC
- **Web Technologies:** DHTML/HTML, XHTML 2.0, JavaScript1.x, XML1.0, XSL, XSLT, XPATH CSS, jQuery, Ajax, HTML/HTML5, CSS, AngularJS, ExtJS, JavaScript, jQuery, Bootstrap, GraphQL, Nodejs, MERN.
- **Development Tools:** Eclipse, IBM RAD, JBuilder, NetBeans, MS Visual Studio, Spring Tool Suite.
- **Web/Application Servers:** Tomcat, WebLogic, IBM WebSphere 7.x/8. X, JBoss, WebSocket API
- **Database:** Oracle 11g, DB2, SQL server 2008, MySQL, MongoDB, Cassandra, PL SQL, Informatica.
- **Cloud Platform:** AWS, AWS ROSA, S3, EC2, Lambda.
- **Platforms:** Windows, Mac, UNIX, LINUX
- **Testing Tools:** JUnit, JIRA, Cucumber, Protractor, Jasmine, Selenium
- **Version Control:** CVS, SVN, VSS, GIT, GitHub
- **Methodologies:** Agile, Waterfall
- **Build Tools:** Gradle, ANT, Maven, Jenkins

PROFESSIONAL EXPERIENCE

Client: AMEX

Full Stack Java Developer

July 2023 - Present

Project Description: The Online Banking Portal Enhancement project aimed to significantly upgrade State Street Bank's online banking platform by introducing new features, enhancing security protocols, and improving overall performance. This initiative focused on delivering a seamless, user-friendly experience while ensuring the portal's robustness and scalability.

Responsibilities:

- Developed and maintained scalable microservices using Core Java and Spring Boot, ensuring seamless integration and enhanced performance within the online banking portal.
- Migrated on-premises applications to the AWS Cloud environment using AWS ROSA for improved reliability, scalability, and high availability.
- Implemented cloud-native solutions leveraging Amazon EC2, ECS, EKS, and AWS Lambda to optimize resource management and reduce operational costs.
- Integrated AWS SDK to facilitate the secure and efficient interaction between the banking portal and Amazon S3, RDS, and DynamoDB for data storage and retrieval.
- Enhanced data security and compliance protocols by configuring and managing CloudWatch for continuous monitoring, alerting, and logging of cloud infrastructure activities.
- Developed and maintained data persistence layers using Hibernate with MySQL and PostgreSQL to support complex banking transactions and user data management.
- Implemented RESTful and SOAP APIs to streamline communication between the banking portal and third-party financial services, improving data exchange efficiency.
- Modernized the front-end user experience using Angular, HTML, CSS, and JavaScript for a responsive, user-friendly interface.
- Built containerized applications with Docker and deployed them on Kubernetes, ensuring consistent deployment and scalability across the cloud infrastructure.

- Utilized CI/CD pipelines for continuous integration and deployment using tools like Jenkins and GitHub Actions, reducing deployment time and improving code quality.
- Implemented advanced security protocols in AWS ROSA, integrating AWS Identity and Access Management (IAM) and Red Hat's security policies to ensure robust access control and data protection.
- Managed cluster operations in AWS ROSA, including scaling, monitoring, and maintaining Kubernetes-based workloads for high availability and resilience.
- Developed and maintained asynchronous messaging services using Apache Kafka for real-time data streaming and reliable communication between distributed systems.
- Implemented data storage solutions with Amazon RDS, and MongoDB, optimizing data retrieval times and ensuring high availability.
- Developed robust unit tests with JUnit and performed integration testing to ensure code quality and functionality across various components of the online banking platform.
- Employed Red Hat OpenShift (ROSA) for orchestrating microservices and containerized workloads, enabling seamless deployment and management of cloud-native applications.
- Enhanced DevOps practices by integrating AWS ROSA with CI/CD tools, such as Jenkins and GitHub Actions, for automated pipeline workflows and efficient release management.
- Configured secrets management within GitHub Actions for secure handling of environment variables, API keys, and credentials during pipeline executions.
- Collaborated with cross-functional teams to design and develop scalable backend services while maintaining code efficiency, performance, and best practices in Spring framework and Spring Security.

Environment: Core Java, Spring, Amazon Web Services, S3, EC2, Lambda, ECS, EKS, Amazon RDS, Amazon DynamoDB, AWS SDK, Red Hat Shift, CloudWatch, Hibernate, MySQL, PostgreSQL, XML, JSON, CSS, HTML, Java Script Angular, Oracle, Kafka, MongoDB, Spring Boot, JUnit, Restful APIs, Soap APIs, GIT, Docker, Jenkins, Kubernetes, CI/CD.

Client: Capital One

Java Developer

Jan 2021 – Aug 2022

Project Description: Implement a secure user authentication system that allows customers to register, login, and manage their accounts securely. Authorization mechanisms should ensure that users can only access functionalities and data that they are authorized to.

Responsibilities:

- Developed a secure user authentication system using Java, Spring Boot, and Spring Security, ensuring data confidentiality and integrity throughout the registration, login, and account management processes.
- Implemented front-end components with ExtJS and AngularJS to create a responsive and intuitive user interface for Financial Services' online banking platform, enhancing user experience and accessibility.
- Utilized JavaScript, jQuery, and Ajax to facilitate dynamic client-side interactions and seamless data retrieval, optimizing the performance and responsiveness of the online banking platform.
- Integrated various Spring modules including Spring Batch and Spring Cloud to streamline batch processing and enable scalable, cloud-native microservices architecture, enhancing agility and resource utilization.
- Developed Kafka producers and consumers for handling high-throughput financial data streams, reducing latency and improving the speed of data processing.
- Leveraged Hibernate ORM framework for seamless object-relational mapping and database interaction, ensuring data persistence and integrity in the online banking platform.
- Implemented WebSphere security features such as SSL, authentication, and authorization, ensuring secure communication and access control for applications.

- Implemented RESTful APIs using Spring MVC framework to enable seamless communication between client applications and back-end services, facilitating interoperability and integration with external systems.
- Developed and maintained backup and recovery procedures using Unix utilities, ensuring data integrity and availability.
- Implemented multi-stage workflows in GitHub Actions to manage complex deployment processes, including build, test, staging, and production deployment phases.
- Developed CI/CD pipelines integrated with Kubernetes for automated deployment and management of containerized applications, ensuring rapid delivery of updates and bug fixes.

Environment: Java, J2EE, ExtJs, jQuery, JavaScript, Struts, HTML/HTML5, ExtJS, AngularJS, NodeJS, Spring, Spring Batch, Spring boot, Spring AOP, Spring Cloud, Hibernate 4, Apache Kafka, JMS, JSF, RESTful, REST API, SOAP API, log4J, JUnit, Jenkins, JBoss, Apache Camel, Maven, Gradle, XML, XSLT, Oracle, Cassandra, Ajax, XSD, TDD, Selenium, IBM WebSphere Server, AWS, Spring Tool Suite(STS), GIT, Docker, Kubernetes, CI/CD.

Client: Home Depot

April 2018 – Dec 2020 Jr

Software developer

Responsibilities:

- Developed and maintained scalable, secure web applications using *Java* frameworks like *Spring Boot* and *Jakarta EE*, enhancing functionality for omnichannel retail operations.
- Built and integrated APIs using *Spring REST* and *JAX-RS* to facilitate seamless communication between frontend applications and backend services, supporting robust retail platforms.
- Collaborated with front-end developers to ensure a consistent, seamless user experience across web and mobile platforms, improving customer satisfaction and engagement.
- Worked with databases such as *MySQL*, *Postgres* and *Oracle* to efficiently store and retrieve product information, customer data, and order details, ensuring data integrity.
- Developed features for *online product browsing, inventory management, and checkout processes*, contributing to a streamlined user experience.
- Built e-commerce platforms and retail software for omnichannel customer interaction, enabling a cohesive shopping experience across all channels.
- Integrated with third-party applications like *payment gateways* and inventory management systems to extend functionality and improve operational efficiency.
- Designed, configured, and managed public/private cloud infrastructures using *Amazon Web Services (AWS)*, which includes *VPC, EC2, S3, Cloud Front, ELB and Elastic Beanstalk*. Worked with *Agile methodologies* to ensure efficient project development and timely delivery of retail solutions.
- Demonstrated excellent problem-solving and debugging skills to quickly identify and resolve technical issues, ensuring minimal disruption to users.
- Designed and implemented a robust *RESTful API* using *Spring Boot*, boosting mobile app development and enhancing *API* throughput by 50%.
- Updated on new technologies and trends in the omnichannel retail industry to incorporate innovative solutions into projects.
- Created innovative solutions that enhanced the retail customer experience, driving increased engagement and satisfaction.
- Managed data interactions with databases to support business needs, ensuring efficient data flow and storage.
- Leveraged *Java* and *JavaScript* frameworks to build dynamic, user-friendly applications, improving user interface and experience.

Environment: Core Java, Eclipse, Struts, MVC, JavaBeans, Servlets, JSP, PL/SQL, Oracle, HTML, CSS, JavaScript

EDUCATION

Master of Science in Computer Science

Midwestern State University, Wichita Falls, TX, USA — 2024
