EDUCATION

University of North Texas, Denton, TX

May 2024

Master of Science in Information Systems and Technologies, Specialization: Information Security

- **Relevant Coursework:** Enterprise Data Warehousing, Information Systems and Development, Networking and Telecommunication, Information Technology Security, Information Security Management.

Jyothishmathi Institute of Technology and Science (JITS), Karimnagar

May 2018

Bachelor of Technology, Electronics and Communication Engineering

- **Relevant Coursework:** C Programming, Computer Networks, Satellite Communication, Electronic Circuit Analysis, Analog Communications.

EXPERIENCE SUMMARY

- Possess over 6 years of IT experience in designing, implementing, and troubleshooting security solutions, with expertise in IAM and PAM tools like Centrify (Delinea) and CyberArk. Proficient in managing multi-platform environments, analyzing and resolving security issues, and delivering exceptional customer service under tight deadlines.
- Proficient in learning and adapting to new IAM tools, with experience in Centrify, CyberArk, and Okta, and a strong foundation in IAM principles.
- Functioned as a Risk Analyst in CyberArk EPV Operations at HCL, where responsible for risk assessment and management within the CyberArk environment.
- As a Security Analyst at NextEra Energy, I conducted security incident investigations, managed Incident Response Plans, and performed extensive ITSM and PAM operational tasks.

PROFESSIONAL EXPERIENCE

NextEra Energy, FL, US

Feb 2024 to Present

Security Analyst

- Analyze, troubleshoot, and investigate security-related, information systems' anomalies based on security platform reporting, network traffic, log files, host-based and automated security alerts.
- Led IAM product enhancements, defining requirements and improving authentication workflows to streamline user access.
- Create Incident Response Plans and manage daily cyber security incidents throughout the enterprise.
- Developed and maintained IAM awareness training programs to educate employees on security best practices.
- Performed regular health checks on Okta and Active Directory environments to ensure optimal performance and security.
- Implemented passwordless authentication solutions, including FIDO/FIDO2, to enhance security and user experience.
- Integrated and managed Okta as a CIAM solution to enable secure authentication and access for both B2B and B2C applications.
- Mentored junior team members on IAM best practices and provided guidance on incident response and security protocols.
- Configured and implemented Single Sign-On (SSO), Multi-Factor Authentication (MFA), and Role-Based Access Control (RBAC) in Okta to enhance security posture and streamline access management for both customers and employees.
- Worked closely with IT and security teams to implement CIAM strategies, ensuring secure authentication and authorization practices.

CSS Corp, Chennai, India

Nov 2020 to Aug 2022

Network Engineer

- Perform administrative tasks and provide application as well as operational support to manage systems, domains, passwords, users in Centrify Access Manager.
- Managed user lifecycle events, such as Joiner-Mover-Leaver and conducted Access Reviews for Centrify-managed systems.
- Practical understanding of zones, Active Directory Users and Computers, Group Policy, Role-Based Access Control, Auditing and Monitoring, Access Manager, and the Provisioning and Deprovisioning process.
- Experienced in IAM and PAM modules, with a strong foundation in Centrify agent installation and deployment on both Windows and Unix systems. Proficient in utilizing the Centrify PAS portal.
- Designed and implemented IAM solutions for multi-cloud environments, including AWS and Azure, ensuring secure access controls and compliance with cloud security best practices.
- Experienced with MFA policy installation, applying policies, debugging security and authentication issues on servers, and deploying MFA depending on user requests and log analysis within Centrify environments.
- Specify, design, and build Identity Access Management solutions including password management, SSO, federation, and authentication.
- Integrated **Centrify with AWS IAM and Active Directory**, enabling secure access controls across **multi-cloud**

environments.

- Integrated Centrify Privileged Access Service (PAS) with AWS to manage and secure privileged access to AWS resources, including credential vaulting, just-in-time access, AWS IAM role management, and session auditing with multi-factor authentication (MFA).
- Generated customized reports based on specific requirements in Centrify Reporting Services.
- Configured and managed Kerberos authentication for Windows SSO, ensuring secure and seamless user access across enterprise applications.
- Provided support to enterprise customers via email and remote sessions, collaborating with cross-functional teams to meet business access requirements and managing cases and RFEs through Salesforce and Jira.
- Streamlined customer support workflows by providing detailed, adaptive solutions for Centrify-managed systems.
- Installed and implemented Centrify agents in UNIX environments for service monitoring, integrated Linux/Unix clients with Active Directory attributes, and leveraged Centrify Single Sign-On technology for seamless migration of UNIX/Linux servers.
- **Configured SAML, OAuth2.0, and OpenID Connect for SSO integrations** across enterprise applications, improving authentication security.
- Automated IAM lifecycle workflows, including **user provisioning, deprovisioning, and access governance**, using **PowerShell scripts** and **REST APIs**.
- SSH generated public & private keys and shared the keys with other servers for SSH key authentication based on user requirements.
- Configure connectors to join the cloud-based Centrify to the ADUC in the window server.
- Active Directory bridging agents on Centrify services and Creating Profile/zone in Centrify and managing the local and ad users.

HCL, Hyderabad, India

June 2018 - Nov 2020

System Analyst

- Performed **password resets** for **Windows Domain, Windows Standalone, and Unix Standalone** using **Active Directory (ARS)** and Putty.
- Secured and maintained **privileged accounts** in **CyberArk EPV (Enterprise Password Vault)**.
- Guided application teams in integrating IAM solutions, including SSO, MFA, and RBAC, ensuring secure and seamless connectivity.
- Onboarded user accounts, performed privilege provisioning, and maintained security standards for privileged accounts.
- Managed DR failover scenarios, ensuring minimal downtime and secure recovery of privileged access systems.
- Created **CyberArk safes** before onboarding accounts and conducted **detailed access reviews** for compliance.
- Led the deployment and testing of CyberArk POC environments, validating key functionalities such as privileged account management, password vaulting, and integration with Active Directory to ensure alignment with security policies and organizational requirements.
- Conducted **privileged access audits and risk assessments**, ensuring compliance with **IGA frameworks** like **NIST and CIS controls**.
- Successfully performed the failback process by synchronizing the DR Vault with the Primary Vault, restoring operations to the primary system and ensuring up-to-date privileged account management post-recovery.
- Implemented and supported MFA solutions, ensuring seamless integration with CyberArk environments
- Hands-on experience in user account creation, password resets, account unlocking, and patching Linux systems as a shared resource
- Performed regular health checks, deactivated inactive users within the required timeline, and ensured all accounts were maintained without null passwords to uphold security standards.
- Coordinated and executed the migration and upgrade of Windows OS patches in CyberArk environments, ensuring the continued functionality of privileged access services while maintaining compliance with security standards.

SKILLS

IAM Tools: Centrify, CyberArk, Okta, Active Directory, LDAP, SAML, OAuth2.0.

Scripting: PowerShell, Python, Bash, REST APIs.

Cloud: AWS.

Security: FIDO/FIDO2, Passwordless Authentication, Kerberos, NIST, CIS controls.

Operating Systems: Windows, Unix/Linux, Mac OS.

Other Tools: Splunk, Jira, Salesforce

Certifications: CISSP, CompTIA Security+
