

ARSLAN JAVED

Senior Software Engineer

📞 (804) 208-9521 ✉️ arslan.javed6161@gmail.com 🔗 linkedin.com/in/arslan-javed-8nj 📍 United States

SUMMARY

Experienced **Senior Software Engineer** specializing in scalable backend development and API design with Python, backed by 6+ years optimizing microservices and cloud deployments (AWS, GCP, Azure). Adept at infrastructure automation via Terraform, containerization with Docker, and managing CI/CD pipelines using GitHub Actions and GitLab CI for streamlined software delivery. Skilled in version control (Git) and microservices architecture, with a focus on integrating emerging tech trends and driving open-source contributions to maintain competitive advantage.

EXPERIENCE

Senior Software Engineer

Codex Innovation

📅 09/2022 - Present 📍 New York

- Engineered a **RAG-based chatbot** handling **15,000+** monthly user queries via WhatsApp and Facebook Messenger using LangChain and vector databases.
- Developed and deployed **30+ microservices** and APIs with **Python frameworks** on AWS, GCP, and Azure using Docker, enhancing scalability.
- Designed CI/CD pipelines on GCP Cloud Run, automating **25+ deployments** monthly across dev, test, and production environments.
- Improved backend API performance by 40% and **scaled ecommerce** services using RabbitMQ, Celery, and Redis handling **1M+ transactions**.
- Optimized database queries to improve overall system efficiency. Integrated multiple independent data sources into a centralized database by integrating them via API services.
- Monitored model performance, addressing issues and updating models based on new data.
- Conducted training and mentoring sessions for team members, advancing AI expertise across the organization.

Software Engineer

Bank of America

📅 07/2021 - 08/2022 📍 Jersey City

- Enhanced and delivered Python-based applications with focus on scalability, high availability, and performance, using OOP, multithreading, and design patterns.
- Built and optimized RESTful APIs and microservices using Python, integrating with relational databases (Oracle) for complex data processing.
- Implemented automated testing, improving quality assurance and ensuring compliance with enterprise governance standards.
- Improved system efficiency and performance through database query optimization, automation, and performance tuning.
- Contributed to CI/CD pipelines and DevOps practices, streamlining deployment, regression testing, and production monitoring across multiple environments.
- Participated in agile development (story refinement, estimation, proof of concept), driving high-quality delivery under tight deadlines.
- Mentored peers and collaborated across regions to ensure delivery of robust, secure, and compliant financial technology solutions.

Software Engineer

TechDreams Solution

📅 07/2018 - 06/2021 📍 Remote

- Improved surveillance accuracy by 15% through research on machine and deep learning applications.
- Actively involved in the development of a cloud-based SaaS platform, leveraging Python's AWS SDK to interact with various cloud services.
- Collaborated in the development of RESTful APIs using Django and Flask, enabling document management and search capabilities.
- Worked on 3D neural networks and managed multimodal datasets.
- Deployed machine learning models onto Raspberry Pi devices.
- Build CRUD APIs for a financial application with automated tests.

EDUCATION

Associate in Computer Science

Brookdale Community College

Bachelor's in Computer Science

UCP

SKILLS

Python	Flask	Django	Git/GitHub	
GCP/AWS/Azure		MongoDB		
Microsoft Power BI		RESTful API	FastAPI	
PostgreSQL	DynamoDB		Docker/ Kubernetes	
Redis	REST	Jira	RabbitMQ	Terraform
ETL/ELT Pipelines		Microservices		GraphQL
Azure	Raspberry Pi		API Development	
Microservices Architecture			Celery	
Agile Communication		Problem Solving		
Collaboration		Adaptability	Time Management	
Agile Methodologies				

PROJECTS

Smart Commercial Facility System (SCFS)

- Increased shopper engagement by **30%** by implementing a **FastAPI**-based indoor navigation tool for large malls.
- Improved application security by **40%** by implementing OTP verification for reliable and authorized access.
- Worked on **RESTful APIs** for shop search and navigation, integrated with an **interactive map view** for intuitive indoor guidance.
- Introduced a **shopping coupon system** to provide exclusive offers for app users, driving customer engagement and mall promotions.
- Delivered a **scalable, real-time solution** for indoor maps and navigation, enhancing both user convenience and retailer visibility.

(i-Care-X)

- Upgraded patient data interpretation for **500 users** by developing an end-to-end healthcare app with **Plotly Dash charts**.
- Created a **specialized meal ordering system** integrated with cloud kitchen support, **delivering customized diets for rheumatic patients**.
- Establish the application on an **AWS EC2 instance**, ensuring a reliable and scalable cloud-based solution.
- Elevate patient experience by combining **data-driven health insights** with **personalized nutritional support** in a single platform.

Fashion Recommendation Based on Images

Image-based fashion recommendation system to enhance user experience and solve the "cold start" problem in e-commerce, ensuring relevant suggestions for new users and products.

- Revamp feature extraction accuracy by **32% using CNNs** for visual comparison of **1000 fashion items**.
- Increased **user engagement by 40%** by suggesting visually similar items without prior user data.
