SUMMARY

Highly skilled Software Engineer with 4+ years of experience building scalable full-stack applications using Java, Python, Go (Golang), React.js, and Spring Boot, specializing in REST APIs, microservices, and cloud platforms (AWS, Azure). Demonstrated expertise in Agile methodologies, DevOps practices, and the full SDLC, applying Computer Science and Information Technology principles to deliver high-performance, secure, and user-centric solutions within modern framework environments.

EXPERIENCE

Sureify - Software Engineer 2

Aug 2021 — Aug 2023

- Developed an API wrapper microservice using **Java, Spring Boot** and Golang within Agile methodologies, automating insurance application prefilling and accelerating onboarding workflows by 90% while adhering to SDLC best practices.
- Designed a dynamic flowchart visualization module with **React.js**, reducing no-code form creation time by 70% and enabling faster deployment for insurance teams.
- Reengineered authentication and session validation using **JWT, Redis**, significantly improving API response performance by 25% and enhancing system security across enterprise-grade insurance modules.
- Built optimized **CI/CD pipelines** with **Docker, Jenkins** using DevOps frameworks, reducing build sizes by 25% and accelerating deployment velocity for multiple microservices and production-ready application modules on Azure cloud.
- Refactored **PostgreSQL/MySQL queries and indexes**, reducing execution time by 40%, saving 300+ developer hours per year, and improving large-scale data analytics and reporting efficiency
- Designed and optimized event-driven microservices using **Spring Boot, Kafka**, and **Redis** under Agile methodologies, enabling the system to process 2M+ daily transactions with <150ms latency during peak surges while following SDLC standards.

Capgemini - CNA Insurance - Software Engineer

Sep 2019 — Aug 2021

- Developed and deployed full-stack applications with **React.js, Node.js, GraphQL APIs** using Agile methodologies, scaling to 20K+ active users and increasing customer engagement by 35% while applying Computer Science principles.
- Designed backend **components** using **Java, Spring Boot** and Golang frameworks to handle complex policy edge cases, reducing manual intervention by 50% and ensuring high accuracy across multi-state insurance operations.
- Enhanced message queue reliability with **Kafka** and **microservices architecture**, reducing queue failures by 90% for uninterrupted regulatory reporting and improving system scalability under high load conditions.
- Built and maintained automated **CI/CD pipelines** with **Jenkins, GitHub Actions, Docker** using DevOps practices, reducing deployment time from 2 hours to 15 minutes and enabling zero-downtime production upgrades for multiple services.
- Integrated secure **REST** and **gRPC APIs** with **OAuth2, JWT, TLS encryption** following SDLC and Agile methodologies, achieving 100% GDPR/HIPAA compliance, reducing security incidents by 35%, and strengthening enterprise-level data protection.
- Architected **cloud-native** applications on **AWS (EKS, Lambda, S3), Azure, and GCP**, supporting 50K+ concurrent sessions with 99.99% uptime SLA and delivering high availability across multiple global regions using Information Technology best practices.

PROJECTS

Bill Splitting Application ▶ Java, Spring Boot, PostgreSQL

Jan 2025 — Apr 2025

- Developed a full-stack React Native, Spring Boot, and PostgreSQL bill splitting app, implementing secure REST APIs and transactional logic to manage group expenses and balances in real time, ensuring accurate debt resolution for multiple users. Followed Agile methodologies and full SDLC practices to enhance reliability and scalability.

Social Media Application ▶ JavaScript, React, MySQL, NodeJS, AWS

Aug 2024 — Dec 2024

- Developed a social media platform using JavaScript, React, NodeJS, MySQL, and AWS, implementing posts, comments, likes, follows, JWT-based authentication, and containerized microservices for a scalable, seamless user experience. Applied Agile methodologies throughout the SDLC to ensure timely delivery and code quality.

EDUCATION

University of Alabama at Birmingham - *Master of Science in Computer and Information Science*

SKILLS

Programming Languages	: Java, Go, Python, JavaScript, TypeScript, SQL, HTML, CSS
Frameworks & Libraries	: React.js, Next.js, React Native, Spring Boot, FastAPI, Node.js, GraphQL, three.js
Cloud & DevOps	: AWS (CloudFormation, Bedrock, S3, RDS), Docker, Terraform, Jenkins, CI/CD Pipelines
Databases & Storage	: PostgreSQL, MySQL, SQL Server, Redis, Elasticsearch, FAISS
Testing & Automation	: Jest, Enzyme, Playwright, Python schedule library, Unit Testing
Other Tools & Platforms	: Git/GitHub, JIRA, Figma, Streamlit
Relevant Skills	: Java, JavaScript/TypeScript, C#, PostgreSQL, MySQL, SQLiteGraphQL, gRPC, Python, Java API
