LinkedIn [linkedin.com/in/satya-sandeep-a14866168](https://www.linkedin.com/in/satya-sandeep-a14866168)

- Over 7 years of expertise in **Java/J2EE** technologies, including **Spring Boot**, Spring MVC, **Hibernate**, and **Struts**, with a strong background in microservices architecture and RESTful Web Services for scalable, high-performance applications. **Certified AWS Solutions Architect** with in-depth knowledge of cloud-based solutions.
- Spearheaded the development, deployment, and management of event-driven and message-driven architectures using **Apache Kafka**, **RabbitMQ**, **JMS**, and **ActiveMQ**, enabling real-time data exchange and inter-service communication, reducing data processing time by 25%.
- Proficient in **Java 8/11** features such as Lambda expressions, Streams, and Functional Interfaces; adept at handling multithreading, collections, and exception handling for efficient, maintainable code, contributing to increased code efficiency and readability.
- Delivered full-stack development solutions with **JSP**, **Servlets**, **JavaScript**, **JQuery**, **AngularJS**, and **ReactJS**, enhancing user experience with dynamic, responsive interfaces, leading to a 15% improvement in user engagement.
- Optimized database management and interactions using relational databases like **MySQL**, **Oracle**, and **PostgreSQL**, and **NoSQL** databases including **MongoDB** and **Cassandra**; leveraging Spring Data JPA and Hibernate for ORM in high-performance systems.
- Demonstrated ability to build and automate CI/CD pipelines using **Jenkins**, **Maven**, **Git**, and **GitLab**, supporting continuous integration and streamlined deployments, reducing release times by up to 30%.
- Ensured optimized deployments with Application Servers such as **Apache Tomcat**, **WebLogic**, and **JBoss** across various environments, enhancing deployment stability and uptime.
- Led containerization initiatives with **Docker** and orchestration with **Kubernetes**, achieving high availability and scalability, increasing deployment flexibility by 40%.
- Applied **Test-Driven Development (TDD)** and **Behavior-Driven Development (BDD)** methodologies, with extensive testing expertise using **JUnit**, **Mockito**, **Cucumber**, **Postman**, and **JMETER**, ensuring code reliability and reducing defect rates by 20%.
- Collaborated effectively in **Agile/Scrum methodologies** within cross-functional teams, delivering high-quality solutions focused on collaborative development, iterative improvement, and accelerating project timelines.
- Skilled in monitoring and logging tools like **AppDynamics**, **ELK Stack (Elasticsearch, Logstash, Kibana)**, and **Splunk** to track performance, enabling proactive issue resolution and reducing system downtime.
- Leveraged configuration management tools such as **Ansible** and **Terraform** for infrastructure automation, enhancing deployment efficiency and reducing manual effort by 35%.

Technical Skills

Cloud Technologies: Azure, AWS, GCP, OpenShift, Pivotal Cloud Foundry (PCF), AWS Lambda, AWS IoT Core

Containerization: Docker, Kubernetes, VMware, VirtualBox

CI/CD Tools: Jenkins, Azure DevOps, GitLab, GitHub, Maven, Gradle

Configuration Management Tools: Ansible, Terraform, Ansible Tower

Version Control Tools: GIT, GitLab, Bitbucket, SVN, CVS

Scripting Languages: Python, Java, JSON, Bash Shell, PowerShell, C, C++, Groovy, PL/SQL, Golang

Monitoring Tools: AppDynamics, Splunk, Dynatrace, Prometheus, Grafana

Virtualization Technologies: VMware, VirtualBox

Operating Systems: Ubuntu, Windows, Linux, Unix, MacOS

Databases: MySQL, PostgreSQL, MongoDB, Oracle, Cassandra, HBase, DB2, DynamoDB

Web Servers: Apache Tomcat, JBoss, WebLogic, IBM WebSphere

Build Tools: Maven, Gradle, Ant

Bug Tracking Tools: JIRA, ServiceNow, Confluence

Automation Tools: Selenium WebDriver, Sahi Pro, Eggplant, Automation Anywhere, UiPath, JUnit, Cucumber, Postman, JMeter, Mockito

Messaging Tools: Apache Kafka, RabbitMQ, ActiveMQ, JMS, MQTT

Web Technologies: HTML, HTML5, CSS, CSS3, JavaScript, jQuery, AJAX, ReactJS, AngularJS, JSP, Servlets, JSON, SOAP, RESTful Web Services

Work History

Client: Fidelity Investments

Role: Full Stack Java Developer

Location: Kansas City, Overland Park

02/2023 – PRESENT

Roles and Responsibilities:

- Designed and implemented a robust microservices architecture with **Java 11**, **Spring Boot**, **Docker**, and **Kubernetes** to efficiently manage high-volume transaction processing, enhancing scalability and reducing downtime by 30%.
- Developed and optimized secure **RESTful** and **SOAP APIs** using **Postman**, **SoapUI**, and **Apache CXF** for seamless communication with third-party services, reducing latency by 20%.
- Automated CI/CD pipelines using **Jenkins**, **GitLab CI/CD**, and **Docker Compose**, achieving continuous integration and faster deployments with reduced manual intervention.
- Enhanced data security protocols using **Spring Security**, **OAuth 2.0**, and **JWT** authentication, implementing **multi-factor authentication** and **RBAC** for compliance with U.S. financial regulations.
- Optimized database interactions with **MySQL** and **Redis** through **advanced indexing**, **query tuning**, and **caching strategies**, resulting in a 25% improvement in data retrieval speeds.
- Centralized application monitoring and alerting with **ELK Stack (Elasticsearch, Logstash, Kibana)**, **Splunk**, and Prometheus to proactively identify and address system issues.
- Applied **TDD** with **JUnit**, **Mockito**, and **TestNG** to ensure high **code reliability**, reducing production defects by 15% and improving code coverage metrics.
- Conducted high-load performance and **stress testing** with **Apache JMeter** and **Gatling**, ensuring **API** resilience and stability under peak load conditions.
- Collaborated with cross-functional Agile teams with **DevOps**, **security**, and **QA**, using **Jira** for **sprint planning**, enhancing alignment on project requirements and improving delivery speed.
- Integrated **Redis** as a caching layer to optimize frequently accessed data, reducing backend load and accelerating response times by 20%.
- Implemented disaster recovery solutions with **AWS RDS** failover and replication, ensuring data integrity and continuity during high-demand or outage scenarios.

Environment:

- Languages: Java 11, JavaScript
- Frameworks: Spring Boot, Hibernate
- Tools: Jenkins, GitLab CI/CD, ELK Stack, JUnit, Mockito, Apache JMeter, Redis, Prometheus
- Databases: MySQL, PostgreSQL

Client: Databricks
Role: Java Full Stack Developer
Location: Bangalore
08/2019 – 06/2022

Roles and Responsibilities:

- Architected real-time data pipelines with **Kafka Connect**, **Apache Flink**, **Spark Streaming**, and **Hadoop** to process and analyze patient data, reducing data lag by 30% for faster healthcare insights.
- Developed modular **REST API** frameworks using **Spring Boot**, **Swagger**, and **OpenAPI specifications**, enabling integration with healthcare applications and improving data flow.
- Managed and optimized **AWS infrastructure (EC2, S3, RDS, Lambda)** for scalable data storage, ensuring compliance with healthcare privacy standards.
- Enhanced **front-end performance** with **ReactJS**, **AngularJS**, and **Material-UI**, integrating **Redux** for improved state management, increasing user engagement by 20%.
- Automated CI/CD workflows using Jenkins, GitLab, Docker, and Kubernetes, achieving consistent deployments and reducing build times.
- Implemented **infrastructure as code (IaC)** using **Terraform** and **CloudFormation**, reducing provisioning times by 25% and ensuring configuration consistency across environments.
- Enabled system monitoring and alerting with **Prometheus**, **Grafana**, and **ELK Stack**, achieving 99.9% uptime by proactively detecting issues through real-time dashboards.
- Conducted comprehensive load and stress testing using **Gatling** and **Apache JMeter** to validate system stability for high-demand scenarios.
- Collaborated with data science and analytics teams to integrate machine learning models, improving predictive accuracy and patient health insights.
- Deployed **AWS Lambda** for serverless functions to handle on-demand processing, cutting operational costs by 15% while maintaining performance.

Environment:

- Languages: Java 8, JavaScript
- Frameworks: Spring Boot, ReactJS, AngularJS
- Tools: Jenkins, Docker, Terraform, Prometheus, Grafana, Apache JMeter, ELK Stack
- Databases: MongoDB, PostgreSQL

Client: HDFC Bank
Role: Software Developer
Location: Hyd, India
02/2017 – 07/2019

Roles and Responsibilities:

- Developed and optimized high-frequency transaction processing systems using **Java 11**, **Spring Boot**, **Hibernate**, and **Apache Kafka** to support millions of transactions securely and efficiently.
- Enhanced real-time monitoring and logging with **AppDynamics**, **Dynatrace**, **Grafana**, and **Splunk**, enabling faster detection of critical issues and reducing incident response times by 20%.
- Modernized legacy applications by upgrading to Java 11, incorporating **Lambda expressions**, **Streams API**, and **Java Concurrency Utilities** to boost performance and reduce code complexity.
- Implemented comprehensive security protocols with **Spring Security**, **OAuth**, and **JWT**, adding multi-factor authentication for data-sensitive applications.
- Optimized **CI/CD pipelines** with **Jenkins**, **Maven**, **GitLab**, and **Docker**, resulting in streamlined deployments with a 40% reduction in time.
- Containerized applications with **Docker** and orchestrated deployments using **Kubernetes**, enabling high availability and easy scalability for the financial services application.
- Implemented **Behavior-Driven Development (BDD)** using **Cucumber**, **Gherkin**, and **Serenity BDD**, ensuring development aligned with client specifications and reducing post-deployment issues by 15%.
- Performed **API testing** and **security validation** using **Postman**, **RestAssured**, and **OWASP ZAP**, ensuring secure data integration with external financial services.
- **Automated deployment processes** with **Ansible** and **Chef** to improve consistency across **production** and **staging environments**.
- Enhanced database performance by optimizing stored procedures and indexing in **MySQL** and **Oracle**, resulting in a 20% boost in query execution times.

Environment:

- Languages: Java 8/11, JSON, XML
- Frameworks: Spring Boot, Hibernate
- Tools: AppDynamics, Dynatrace, Grafana, Jenkins, Docker, Kubernetes, Cucumber, Ansible
- Databases: MySQL, Oracle
