Profile

Results-oriented Software Engineer with 11 years of experience in developing scalable web applications, RESTful APIs, and data-driven solutions. Proven expertise in **Python**, **Django**, **FastAPI**, **React.js**, and cloud-based microservices architecture. Skilled in building and deploying **AI** and **ML** models, integrating **NLP** pipelines, and implementing Large Language Models (**LLMs**) into production-grade applications. Experienced in designing secure, high-performance, and scalable systems, with a strong focus on leveraging **AI-driven insights** to enhance business outcomes. Proficient in Agile environments and collaborative cross-functional teams.

Experience

Senior Software Engineer | Element AI | Contract | Jun 2024 – Present

Element AI is an artificial intelligence company that gives organizations access to technology.

- Designed and developed **AI-driven solutions** using **FastAPI** and **Python**, enabling real-time data processing and seamless integration with client systems to address diverse business challenges.
- Collaborated with cross-functional teams to implement scalable architectures, ensuring reliability and performance across multiple AI-enabled applications.
- Enhanced deployment workflows by creating **CI/CD** pipelines with **Jenkins** and **Azure DevOps**, reducing integration time and minimizing deployment errors.
- Built and maintained scalable cloud solutions using **AWS** services like **EC2**, **S3**, and **Lambda**, achieving high availability and cost efficiency.
- Optimized machine learning workflows by integrating tools like **Apache Spark** and **Databricks** for faster data analysis, reducing processing times by 40%.
- Delivered technical training sessions for client teams, enabling them to adopt and utilize AI-based solutions effectively, improving system adoption rates.
- Wrote comprehensive technical documentation for APIs and deployment workflows, ensuring ease of maintenance and knowledge transfer for internal and client teams.
- Worked with senior leadership to identify and implement solutions aligned with client business goals, delivering measurable value through AI and automation.

Project Engineer | LJA Engineering | Full-time | Oct 2020 – Jun 2024

- Developed and maintained RESTful APIs for Google Cloud Platform, enabling seamless data integrations and empowering millions of users with real-time cloud-based solutions.
- Designed high-performance data pipelines for large-scale analytics, leveraging **BigQuery** and **Cloud Storage**, which improved data retrieval efficiency by over 30%.
- Built responsive and reusable front-end components using **React.js**, ensuring consistency across interfaces and delivering a smooth user experience for enterprise clients.
- Spearheaded the migration of monolithic applications to **Kubernetes**-based microservices, improving scalability and reducing deployment time for critical workloads.
- Implemented robust security measures using **OAuth2** and role-based access control (**RBAC**), ensuring secure communication between services and compliance with industry standards.

- Acted as a bridge between the development team and project management, translating technical details into actionable plans.
- Collaborated with software engineers, designers, and other stakeholders to ensure smooth project delivery.
- Managed integration of third-party systems and software solutions.
- Monitored project progress and troubleshooting technical challenges.
- Provided detailed performance optimization for backend systems, achieving a significant reduction in latency for high-traffic applications.
- Conducted thorough code reviews and collaborated with cross-functional teams to establish best practices for maintaining code quality and improving team productivity.

Senior Python Engineer | Clarifai | Oct 2017 – Sep 2020

A leading, full-lifecycle deep learning AI platform for computer vision, natural language processing, and audio recognition.

- Built and maintained machine learning-backed web applications using **Python**, **Django**, and **React.js**, focusing on scalability and high performance for AI-based solutions.
- Developed RESTful APIs that facilitated the integration of Clarifai's computer vision models into third-party applications, increasing platform adoption by enterprise clients.
- Enhanced database performance by optimizing complex queries and indexes in **PostgreSQL**, improving response times for large-scale datasets.
- Conducted unit and integration testing using **Pytest**, ensuring code reliability and reducing deployment issues in production.
- Partnered with data scientists to integrate trained models into production environments, enabling real-time image and video recognition capabilities.
- Led technical discussions with stakeholders to translate business requirements into technical deliverables, ensuring alignment with client expectations.
- Provided ongoing maintenance and support for production systems, proactively addressing issues to ensure uninterrupted service availability.

Python Developer | Health Catalyst | Jun 2014 – Sep 2017

A tech platform that organizes and links health-related data from different systems.

- Designed and implemented backend services for healthcare data platforms using **Flask** and **Python**, enabling secure and efficient management of patient information and claims processing.
- Built and optimized ETL pipelines for ingesting, transforming, and storing large datasets in compliance with healthcare data standards, improving processing efficiency by 25%.
- Developed interactive dashboards with **Matplotlib** and **Plotly**, allowing healthcare providers to visualize patient trends and improve care delivery.
- Integrated secure authentication mechanisms with **OAuth2** and **JWT**, ensuring HIPAA-compliant data access and maintaining privacy standards.
- Conducted performance tuning for **PostgreSQL** databases, optimizing complex queries and improving data retrieval speed for high-traffic systems.
- Automated report generation and monitoring workflows, reducing manual intervention and improving operational efficiency for healthcare clients.
- Collaborated with cross-functional teams to gather requirements, create technical specifications, and deliver user-friendly features within Agile sprints.

Education

Louisiana State University

- BS in Computer Science | 2007 – 2011
- MS in Computer Science | 2012 – 2014

Skills & Abilities

- **Languages:** Python, JavaScript, SQL, TypeScript, Bash
- **Frameworks and Libraries:** FastAPI, Flask, Django, React.js, Pytest, NumPy, Pandas, TensorFlow, Scikit-learn, Hugging Face Transformers, NLTK, SpaCy, OpenAI API
- **Databases:** PostgreSQL, MySQL, MongoDB, Neo4j, BigQuery, Redis, Elasticsearch
- **Cloud and DevOps:** AWS (EC2, S3, Lambda, RDS, DynamoDB), Google Cloud Platform (BigQuery, Cloud Functions), Azure, Jenkins, Kubernetes, Docker, Terraform
- **Tools and Platforms:** Databricks, Apache Spark, Splunk, Matplotlib, Plotly, Airflow, Apache Kafka, LangChain, Pinecone
- **Specialized AI/ML Tools:** Large Language Models (LLMs), Natural Language Processing (NLP)
- **Development Practices:** Agile (Scrum), Test-Driven Development (TDD), Continuous Integration/Continuous Deployment (CI/CD), Version Control (Git/GitHub/GitLab)
- **Soft Skills:** Team Leadership, Cross-functional Collaboration, Technical Documentation, Requirements Gathering, Stakeholder Communication
