Krishnapodduturi.iosdev@gmail.com

Professional Summary:

iOS Application Developer with around 9 years of comprehensive experience in designing, developing, testing, and maintaining high-performance enterprise and consumer-facing mobile applications. Experienced in delivering scalable, secure, and user-centric solutions across domains such as banking, retail, hospitality, logistics, and utilities, with a proven ability to balance product quality, performance, and maintainability.

Expert in leveraging Swift (1–5), SwiftUI, UIKit, and Objective-C, combined with deep proficiency in modern iOS frameworks, architectural design, and continuous integration practices.

- *High-Performance Development:* Adept at creating native iOS applications optimized for performance and memory efficiency, leveraging advanced SDKs and Xcode capabilities to ensure responsiveness throughout the app lifecycle.
- *Modern Frameworks & Technologies:* Proficient in Apple's Combine framework for declarative APIs and asynchronous event handling, and skilled in SwiftUI for building modern, adaptive user interfaces with features like data binding and custom view modifiers.
- *Reactive Programming Expertise:* Extensive experience with RxSwift, implementing reactive programming patterns to manage complex data flows and UI logic efficiently using Observables, Subjects, and operators.
- *API & Data Integration:* Hands-on expertise integrating GraphQL (Apollo Client) and RESTful APIs for efficient data management, caching, and secure client-server communication. Optimized GraphQL queries and mutations to enhance app performance and minimize over-fetching across high-traffic modules.
- *Comprehensive Framework Knowledge:* Deep expertise in Core Graphics, Core Data, UIKit, MapKit, ARKit, AVFoundation, and Core Animation, as well as integrating third-party libraries such as AFNetworking and CocoaPods.
- *UI/UX Customization:* Proficient in customizing and implementing a wide range of UI components, including UIDatePickers, UIAlertViews, UICollectionViews, and UITableViews, with a focus on creating intuitive and responsive user interfaces.
- *Cross-Platform Development:* Experienced in developing cross-platform mobile applications using React Native and TypeScript, enhancing code maintainability and reducing runtime errors through strong type checking.
- *Testing & Distribution:* Expertise in testing and distributing applications via the App Store, with a strong background in GitHub, Bitbucket, and CI/CD pipelines for automated build and deployment.
- *Design Patterns & Architecture:* Skilled in MVC, MVVM, Singleton, and other design patterns, with a solid understanding of delegation, protocols, and modern architectural approaches to ensure scalability and maintainability.
- *Comprehensive Integration Skills:* Proficient in integrating APIs including Google Maps for geolocation services, and utilizing web services (REST, SOAP) for seamless data retrieval and interaction.
- *Feature Management & Observability:* Experienced in using LaunchDarkly for feature toggling and Glassbox for session analytics, improving user experience and issue traceability.

Technical Skills:

<i>Programming Languages</i>	<i>Swift, Objective-C, C & C++</i>
<i>Scripting Languages</i>	<i>Swift Playgrounds, AppleScript, HTML, JavaScript, Python, Ruby, Shell Scripting, TypeScript.</i>
<i>IDEs/SDKs</i>	<i>XCode/iOS SDK, XCode SDK, HealthKit SDK, MapKit SDK, SiriKit SDK, Network Framework, SPM, Firebase, Instruments, CocoaPods</i>
<i>Frameworks/APIs</i>	<i>UIKit, SwiftUI, RXSwift, Combine, React Native, Cocoa Touch, Foundation, AVFoundation, Core Graphics, Core Data, Core Animation, Core Bluetooth, Core Motion, Core ML, Create ML, GraphQL, HealthKit, Core Bluetooth, Core Location, SceneKit, ARKit, MapKit, CloudKit, WebKit, URLSession, RESTful APIs, Alamofire, Network Framework, Security Framework</i>
<i>UI Design</i>	<i>Layout & Auto Layout, Interface Builder, Visual Design, Storyboard, XIB Files, UI Components, Accessibility, MVC, MVVM</i>
<i>Testing Framework</i>	<i>XCTest, XCUITest, XCTestCase, Xcode Instruments, Test Navigator</i>
<i>Performance Optimization</i>	<i>Memory Management, Performance Tuning, Battery Efficiency, CPU usage, Network performance, Graphics & Animation, Background Tasks, Code Optimization, Testing & profiling, Caching</i>
<i>Mobile Operating Systems</i>	<i>iOS, macOS</i>
<i>Operating Systems</i>	<i>macOS</i>
<i>Phone Simulator and Emulator</i>	<i>iPhone/iPad</i>
<i>Database</i>	<i>Microsoft SQL, Server Compact (SQL CE), Core Data, SQLite, Keychain Services, UserDefaults, Custom File storage, Plist Files, Firebase Firestore, NSCoding/NSKeyedArchiver</i>
<i>Version Control & Project Management Methodology</i>	<i>Git, SVN, Code Review, Jira, ServiceNow, Agile/Scrum</i>
<i>Development Models and Design Patterns</i>	<i>MVC, MVVM, MVP and Clean Architecture & Singleton, Delegate, Observer, Factory, Builder, Adapter, Facade, and Prototype</i>
<i>Additional Skills</i>	<i>Localization, Accessibility, Push Notifications</i>

Professional Experience:

Citizens Bank, Rhode Island (Remote)

Oct 2024 to Till Date

Implementation: Infosys

Role: iOS Developer

App Link: [CitizensBank](#)

Responsibilities:

- Built and enhanced banking app features using reusable UI/UX components provided by the central Components Team, ensuring consistency, scalability, and adherence to accessibility guidelines.
- Reskinned the mobile application using SwiftUI, modernizing the visual design and improving responsiveness across devices.
- Implemented a feature-based modular architecture leveraging Swift Package Manager (SPM) for improved code separation, faster builds, and maintainability.
- Followed MVVM architecture across feature modules, promoting clean code, testability, and separation of concerns.
- Integrated Channel APIs and GraphQL services to streamline data access, minimize payloads, and improve end-to-end performance.
- Enhanced the data layer for caching and offline support, ensuring a smooth user experience even under unstable network conditions.
- Utilized LaunchDarkly feature flags for progressive feature rollout and environment-based toggling, minimizing production risk.
- Collaborated with UI/UX designers to validate visual fidelity, user flows, and accessibility features such as VoiceOver and Dynamic Type.
- Worked closely with QA and testing teams to verify defect fixes, coordinate regression cycles, and maintain release quality.
- Leveraged Glassbox session replays to analyze customer sessions, reproducing and resolving intermittent or non-reproducible issues effectively.
- Developed and maintained unit and integration tests, improving code reliability and reducing production defects.
- Partnered with backend and DevOps teams to validate API contracts, ensure secure data handling, and streamline CI/CD pipelines using Jenkins and GitHub Actions.
- Participated in Agile ceremonies including sprint planning, story estimation, and retrospectives, contributing technical insights and process improvements.
- Monitored and analyzed app performance and crash reports through Firebase and internal analytics dashboards to ensure continuous stability and responsiveness.
- Supported multiple releases and hotfix deployments, balancing new feature delivery with app performance optimization.

Environment: iOS 16, Swift 5, SwiftUI, UIKit, MVVM, GraphQL, LaunchDarkly, Glassbox, Combine, Firebase, Jenkins, GitHub Actions, SPM, CocoaPods.

Fox Corp, NYC (Remote)
Prime Vendor: Kelly Mitchell
Role: iOS Developer
App Links:

[FoxNews](#)
[FoxSports](#)
[FoxNation](#)

Nov 2022 to Sept 2024

Responsibilities:

- Spearheaded the development of dynamic and adaptive UIs using SwiftUI, improving overall user experience.
- Implemented GraphQL to streamline data fetching and enhance application performance.
- Built a robust networking layer using Alamofire, including custom request interceptors, response handling, and centralized error management for consistent API integration.
- Implemented React Native components for cross-platform compatibility, enhancing code reuse and reducing development time.
- Managed iOS builds using Apple Xcode command-line tools, ensuring seamless signing processes and compliance.
- Developed and published Swift packages using Swift Package Manager and CocoaPods for dependency management.
- Led the integration of GitHub Actions workflows to automate iOS build and release processes.
- Utilized scripting skills in Ruby and Python to automate tasks, enhancing overall CI/CD workflows.
- Migrated legacy code to Swift 5 ensuring improved maintainability, performance and compatibility.
- Developed hybrid app components integrating TypeScript for enhanced cross-platform compatibility.
- Optimized app performance by profiling and addressing bottlenecks, leading to a 20% improvement in responsiveness.
- Employed ARKit to develop advanced augmented reality features for interactive user experiences.
- Coordinated with cross-functional teams to refine app architecture and improve code quality.
- Automated build and deployment processes using Jenkins to streamline CI/CD pipelines.
- Conducted code reviews and provided mentorship to junior developers, fostering a collaborative environment.
- Maintained high standards of software quality through rigorous testing and debugging practices.

Environment: iOS 15, Swift 5, SwiftUI, XCode 14, Cocoa Pods, RX Swift, React Native, Combine.

Apple, Seattle (Remote)
Implementaion:Cognizant
Role: iOS Developer

May 2022 to Oct 2022

Responsibilities:

- Designed mobile application and participated in the architectural design of the application i.e., MVVM.
- Developed a feature-rich application using SwiftUI, integrating dynamic and adaptive UI components to provide a seamless user experience across devices.

- Integrated RxSwift for managing asynchronous operations, significantly improving data handling.
- Enhanced CI/CD workflows through scripting in Ruby and Python, streamlining build automation.
- Leveraged Combine framework for efficient data binding and real-time updates, boosting app performance.
- Utilized GraphQL for optimized data operations, reducing server load and enhancing user experience.
- Engaged in codebase migration and version upgrades to maintain compatibility with the latest iOS releases.
- Implemented UIKit and ARKit for creating immersive and interactive user interfaces.
- Participated in regular code reviews and adhered to best practices for coding and design.
- Collaborated with UI/UX designers to ensure alignment with user experience standards.
- Provided technical support and resolved complex issues, ensuring application stability.
- Contributed to documentation and knowledge sharing within the development team.

Environment: iOS 15, Swift 5, SwiftUI, XCode 14, Cocoa Pods, RX Swift, Combine.

FedEx, Memphis (Remote)
Prime Vendor: Cook Systems
Role: iOS Developer
App Link: [FedEx](#)

Nov 2021 to May 2022

Responsibilities:

- Developed and enhanced FedEx mobile applications using Swift and UIKit for improved functionality.
- Integrated RxSwift for asynchronous data handling, enhancing app performance and user responsiveness.
- Migrated critical components from Objective-C to Swift, leading to a more maintainable codebase.
- Worked on UIKit Framework, UI Collection View, and SDK for the applications at hand.
- Implemented TypeScript in a React Native project to leverage static typing, resulting in improved development efficiency and reduced bugs.
- Conducted thorough debugging and troubleshooting of iOS applications, resolving complex build and signing issues effectively.
- Utilized Combine framework for real-time data management and state updates.
- Employed GraphQL for efficient and flexible data retrieval, improving server interaction.
- Utilized Alamofire for efficient HTTP networking, streamlining API requests, handling response validation, and managing network layer abstraction.
- Performed comprehensive unit and integration testing to ensure app reliability and performance.
- Implemented TDD in this application for the Automated testing by using Unit Test Cases.
- Collaborated with stakeholders to gather requirements and implement new features.
- Engaged in version control and release management using GitLab and Jenkins.
- Addressed and resolved performance issues, contributing to a smoother user experience.
- Worked within an agile development framework, participating in sprint planning and retrospectives.

Environment: iOS 15, Objective-C, Swift 5, SwiftUI, XCode 13, Cocoa Pods, RX Swift, Combine

Gap Inc, Folsom (Remote)
Implementation: Infosys
Role: iOS Developer

Mar 2021 to Oct 2021

Responsibilities:

- Contributed to the development of enterprise iPad retail applications used by in-store associates for managing sales, inventory lookup, and customer engagement.
- Implemented UIKit-based feature modules with adaptive layouts optimized for iPad screen sizes and multitasking support.
- Utilized MVVM architecture to improve modularity, maintainability, and testability across large-scale retail workflows.
- Integrated RESTful APIs for product inventory synchronization, barcode scanning, and pricing validation between the app and store backend systems.
- Designed and developed Core Data caching and synchronization logic to support reliable offline functionality in low-connectivity store environments.
- Enhanced performance and responsiveness by profiling memory usage and optimizing data loading for large catalogs.
- Implemented feature-based modularization using CocoaPods and Swift Package Manager (SPM), reducing compile times and enabling independent feature updates.
- Partnered with UX and product teams to create intuitive flows for quick checkout, returns, and item search, ensuring seamless employee adoption.
- Coordinated with QA teams to conduct functional, integration, and regression testing across hundreds of retail store devices.
- Participated in UAT and pilot rollouts, working closely with store managers and IT leads to validate features in live environments.
- Developed unit tests and contributed to automation scripts to improve quality assurance and reduce production defects.
- Collaborated with backend engineers to refine API payloads and reduce latency for store-level data synchronization.
- Worked with CI/CD pipelines via Jenkins for internal enterprise app distribution and version management across multiple environments.
- Supported in-store deployments via MDM/TestFlight, ensuring seamless installation and update flows for retail associates.
- Participated actively in Agile sprints and daily standups, providing technical insight and ensuring on-time delivery of prioritized features.

Environment: iOS 14, Swift 5, Objective-C, UIKit, MVVM, Core Data, REST APIs, Jenkins, Swift Package Manager, CocoaPods, Xcode 12.

Hyatt Hotels, Chicago (Remote)
Implementation: Wipro
Role: iOS Developer
App Link: [WorldOfHyatt](https://www.hyatt.com/en-US/hotels/usa/illinois/chicago/hyatt-regency-chicago)

Sep 2020 to Feb 2021

Responsibilities:

- Contributed to the development and enhancement of the World of Hyatt mobile app, empowering millions of users to manage bookings, loyalty rewards, and check-ins seamlessly.
- Implemented new features and UI enhancements using Swift 5 and UIKit, ensuring consistency with Hyatt's global design and branding standards.
- Collaborated with the API and backend teams to integrate RESTful web services for room availability, booking confirmations, and user account synchronization.
- Utilized MVVM architecture to improve code structure, maintainability, and testability across modules.
- Worked on Core Data for caching user profiles, booking details, and preferences for faster offline access.
- Improved app performance by profiling memory and optimizing network calls, leading to faster load times and smoother transitions.
- Partnered with UI/UX designers to refine hotel search, stay details, and booking summary screens for improved usability and accessibility.
- Conducted unit and integration testing, ensuring new feature stability across different devices and OS versions.
- Collaborated with QA and product teams in Agile sprint cycles for story estimation, validation, and release readiness.
- Implemented analytics instrumentation for user behavior tracking and app usage insights to support business decisions.
- Contributed to accessibility compliance, ensuring compatibility with VoiceOver and large text features.
- Supported App Store releases, participated in regression testing, and validated fixes for production issues.
- Worked on CI/CD pipelines using Jenkins for automated build and release processes.
- Coordinated with cross-functional teams to resolve post-release bugs and continuously enhance user experience.

Environment: iOS 14, Swift 5, Objective-C, UIKit, MVVM, Core Data, REST APIs, Jenkins, Xcode 12, CocoaPods.

PG&E, SFO (Remote)

Mar 2020 to Aug 2020

Prime Vendor: Rapid Value Solutions

Role: iOS Developer

Responsibilities:

- Contributed to the development of an enterprise mobile application used by field officers for outage management, site inspections, and equipment maintenance tracking.
- Designed and implemented UIKit-based interfaces optimized for iPads and rugged field devices, ensuring clarity and usability under varied working conditions.
- Built and maintained Core Data persistence for storing inspection logs, offline forms, and field reports with automatic sync on reconnect.
- Integrated RESTful APIs and JSON parsing for secure, real-time synchronization with enterprise backend systems.

- Worked with MapKit and Core Location to enable geolocation tagging, route tracking, and on-site data mapping features.
- Followed MVVM architecture for cleaner separation of business logic and better maintainability of complex field workflows.
- Optimized the app's startup time and memory usage, improving stability and responsiveness during field operations.
- Collaborated with QA and DevOps teams to validate field test builds and ensure reliable distribution through MDM and Jenkins CI/CD pipelines.
- Partnered with backend engineers to refine API contracts and reduce response times for location-based data requests.
- Conducted unit and integration testing, identifying and resolving performance bottlenecks prior to deployment.
- Contributed to bug analysis and patch releases, ensuring minimal downtime for field agents during production updates.
- Participated in Agile ceremonies, providing technical feedback and ensuring on-time delivery of key features.
- Supported real-world field pilots and UAT, collecting feedback directly from PG&E field officers to improve app usability and reliability.

Environment: iOS 13, Swift 5, Objective-C, UIKit, MVVM, Core Data, REST APIs, MapKit, Core Location, Jenkins, MDM, Xcode 11, CocoaPods.

Prudential Financial, Jersey City

Sept 2019 to Feb 2020

Implementaion: Cognizant

Role: IOS Developer

App Link: [PrudentialFinancial](#)

(Effective April 1, 2022, Empower officially acquired the full-service retirement business of Prudential. For more details, review the [important information](#) associated with the acquisition.) Hence the above is delisted from the App store and is managed by different app (<https://apps.apple.com/us/app/empower/id1001257338>)

Responsibilities:

- Designed and developed iOS applications using Swift and SwiftUI, focusing on user interface and experience.
- Implemented secure data handling with SSL and public key pinning to ensure user data protection.
- Created reusable UI components to maintain consistency across the application.
- Migrated existing swift codebase to latest swift version whenever apple releases a new XCode Software Development Kit (SDK) to incorporate improved features and syntactical advancement.
- Collaborate with UX/UI design and product team to translate designs sketches and wireframes into production application. Created wireframes with demo data prior to Implementation of development.
- Implemented and optimize the iOS accessibility Voiceover access across the screens based on recommended Mobile Accessibility standards.
- Optimized app performance through profiling and memory management techniques.
- Participated in user acceptance testing (UAT) to ensure alignment with business requirements.
- Retrieved secured dynamic data from the web server using JSON and XML parsing.
- Managed build and release processes with DevOps teams, ensuring timely delivery of features.

- Engaged in cross-functional collaboration to enhance app functionality and resolve issues.
- Contributed to technical documentation and provided support during the deployment phase.
- Conducted code reviews and adhered to best practices for coding and design.
- Provided ongoing support and maintenance for released applications.

Environment: iOS 11.0 (Min. Deployment Target) – iOS 12.3, macOS Mojave, Swift 5, SwiftUI, XCode 10.2.1, Cocoa Pods, JSON.

Johnson & Johnson Technologies, Somerset, NJ

Aug 2018 to Aug 2019

Implementaion:Cognizant

Role: IOS Developer

Responsibilities:

- Developed iOS applications using Swift and Objective-C, focusing on performance and scalability.
- Implemented Core Data for robust and efficient data management and storage.
- Engaged in all phases of development from design to deployment, ensuring project milestones were met.
- Provided technical support and developed documentation for application maintenance.
- Conducted unit and integration testing, contributing to high-quality, stable releases.
- Collaborated with business analysts to understand requirements and translate them into technical specifications.
- Coordinated with QA teams to ensure comprehensive testing and issue resolution.
- Managed source code using version control systems and performed code reviews.
- Developed reusable components and frameworks to enhance code consistency and efficiency.
- Participated in continuous improvement initiatives, including process optimization and best practices adoption.

Environment: iOS 11.0 (Min. Deployment Target) – iOS 12.3, macOS HighSierra, macOS Mojave, Objective-C, Swift, XCode 8.1 –10.2.1, Cocoa Pods, iOS 11 SDK.

Cisco, San Jose, CA

Jan 2018 to Jul 2018

Role: IOS Application Developer

App link: [CiscoJabber](#)

Responsibilities:

- Developed iOS applications using Objective-C and Cocoa Touch frameworks for optimal performance.
- Implemented Core Data for persistent storage and integrated with backend web services.
- Created design documentation and technical specifications to guide development.
- Developed client-side components and ensured synchronization with backend services.
- Addressed customer feedback and resolved critical issues to enhance user satisfaction.
- Conducted testing and debugging to ensure application functionality and stability.
- Worked closely with senior developers and participated in an agile development environment.
- Managed version control and code reviews to maintain code quality.

- *Provided support for application deployment and maintenance.*
- *Contributed to the development of new features and enhancements based on user feedback.*

Environment: iPhone SDK, XCode 8.0 - 8.3, SQLite3, SQLite Manager, Objective-C, Cocoa, Instruments, JavaScript, jQuery, Map Kit, Core Location, JSON, and AV Foundation.

Versatile Mobi Tech, Hyderabad, India

May 2015 – Dec 2015

Role: IOS Developer

App Link: [App](#)

Responsibilities:

- *Developed iOS applications using Objective-C and Cocoa Touch, focusing on performance and usability.*
- *Designed and implemented UI components and managed data handling using Core Data.*
- *Created wireframes and documentation to guide development and ensure clarity of requirements.*
- *Developed reusable functions and components to enhance code efficiency and consistency.*
- *Mentored junior developers and managed project tasks to ensure timely delivery.*
- *Collaborated with clients to gather requirements and provide regular updates on project progress.*
- *Participated in application testing and debugging to ensure high-quality releases.*
- *Contributed to process improvements and best practices within the development team.*
- *Provided technical support and troubleshooting for application issues.*
- *Engaged in continuous learning and adoption of new technologies to stay current with industry trends.*

Environment: XCode 6.3.2 – 7.3, iOS (4.x to 6.x), Cocoa Touch, Objective C, Core Graphics, Core Animation, Core Location, MapKit, SOAP, XML Parsing, Social Network Framework, APNS.

Education:

- *Master of Science/Computer Science Engineering/Kent State University/2017*
- *Bachelor of Technology/Computer Science Engineering/Malla Reddy College of Engineering/2015*
