Lewisville, Texas

Professional Summary:

Detail-oriented and technically skilled Senior Business Analyst with 7+ years of experience delivering data-driven solutions across banking, healthcare, and wealth management domains. Strong background in requirements elicitation, SDLC documentation (BRD, FRD, FSD), user story creation, UAT coordination, and stakeholder communication. Adept at bridging the gap between business and technical teams through process modeling (BPMN 2.0), UI/UX wireframes, and agile collaboration using tools like Jira, Confluence, and Azure DevOps. Proven success in regulatory-driven environments, including AML/KYC, GLBA, HIPAA, HEDIS, and GDPR. Extensive hands-on experience with data platforms (Snowflake, Redshift, Databricks), ETL workflows, SQL-based data analysis, data governance (Collibra, Unity Catalog), and modern reporting tools like Tableau, Power BI, and Crystal Reports. Comfortable operating in fast-paced, cross-functional agile teams delivering high-impact digital transformation, fraud detection, and customer onboarding solutions at enterprise scale.

Educational Details:

Master of Business Administration in Business Analytics, Arkansas State University, 2025

Technical Skills:

Business Analysis	BRD, FRD, FSD, User Stories, Epics, Acceptance Criteria, JAD, MoSCoW, Agile/Scrum, Sprint Planning
Tools & Platforms	Jira, Confluence, Azure DevOps, ServiceNow, SharePoint, MS Visio, Lucidchart, Balsamiq, PowerPoint
Data Analytics & SQL	SQL (Oracle, PostgreSQL, MySQL, SQL Server, Redshift, Snowflake), Python (Pandas), SAS, DAX, Excel, Alteryx
ETL & Pipelines	Azure Data Factory, AWS Glue, Control-M, Databricks, Python Scripts, JSON, CSV, Flat Files, S3
Dashboards & Reporting	Power BI, Tableau, Crystal Reports, Excel Power Query, DAX, Data Studio
Data Governance	Collibra, Unity Catalog, Data Dictionary, CCM, PII Masking, BBM, Data Profiling, GDPR, CCPA, HIPAA
Cloud Platforms	AWS (S3, Redshift, Glue), Azure (ADF, Databricks), Snowflake
Domain Expertise	Digital Banking, Loan Origination, KYC/AML, Credit Risk, Claims Adjudication, EHR, Portfolio Management
Process Modeling	BPMN 2.0, Swimlanes, UI/UX Wireframes, Process Redesign, Business Behavior Modeling (BBM)
Testing & QA	UAT, Regression Testing, UI/UX Testing, Test Scripts, Test Cases, Traceability Matrices
APIs & Integration	REST APIs, HL7 (Healthcare), JSON Schemas, Market Data Feeds, Salesforce Integration
Compliance & Risk	AML, KYC, GLBA, OFAC, HIPAA, HEDIS, GDPR, CCPA, FFIEC
Documentation	SOPs, Release Notes, Training Manuals, Change Logs, Status Reports
Data Modeling	Entity Relationship Mapping, Semantic Layer Design, Data Flow Diagrams

Working Experience:

Client: Atlantic Union Bancorp, Inc., Olney, MD

Jan 2024 –Present

Senior Business Analyst

Responsibilities:

- Conducted high-level stakeholder interviews and requirement workshops to capture business needs for enhancing digital banking capabilities, including new mobile and mortgage experiences.
- Created detailed Functional Requirement Documents (FRDs), Business Requirement Documents (BRDs), and system context diagrams using MS Word, Visio, and Lucidchart to formalize scope and design discussions.
- Wrote refined user stories, epics, and acceptance criteria in Jira; prioritized backlog items using MoSCoW and mapped them to sprint goals for iterative delivery.

- Designed data dictionaries and data mapping documents to support ETL development across Snowflake and legacy core banking systems like Jack Henry and Salesforce CRM.
- Worked with data engineering teams to define ETL pipeline requirements using SQL, Python (Pandas), and SAS for daily ingestion of loan, customer, and transaction data from S3 into Snowflake.
- Integrated Collibra and Unity Catalog for enterprise data governance, enabling metadata standardization, lineage tracking, and policy enforcement across sensitive PII and loan data.
- Partnered with AML compliance team to document KYC workflows and define risk scoring thresholds for Anti-Money Laundering rules, integrating with real-time transaction monitoring services.
- Created detailed business process models using BPMN 2.0 to visualize current vs. future state across loan origination, fraud investigation reporting (FIR), and credit underwriting flows.
- Collaborated with product managers and legal teams to perform gap analysis for implementing a new fraud detection system, ensuring alignment with FFIEC and GLBA compliance standards.
- Worked on impact assessment and change control discussions for all scope modifications using Confluence and Jira Change Request workflows, tracking timeline shifts and resource adjustments.
- Built dynamic Tableau dashboards for executive insights into loan portfolio health, delinquency trends, and customer churn, sourcing data directly from Snowflake and Salesforce.
- Automated churn and retention reporting using Python scripts scheduled through Control-M to extract, transform, and load behavioral data from Snowflake to marketing dashboards.
- Participated in sprint planning and sprint reviews with cross-functional teams to align technical delivery with business priorities, using agile ceremonies and burndown metrics to track progress.
- Defined transformation logic for credit risk scoring models in partnership with data scientists, translating business inputs into SQL logic and JSON rules files processed in ETL.
- Supported data profiling, cleansing, and validation activities to ensure clean migration of historical data from legacy systems into the new cloud data warehouse.
- Coordinated with the data governance team to implement data quality rules and stewardship processes in Collibra for key entities like customer, loan, and account.
- Used SAS Enterprise Guide and SQL to perform ad hoc analysis on historical lending data to support business decisions and predictive modeling efforts.
- Facilitated workshops with loan operations teams to streamline the digital loan origination process and eliminate redundant manual steps via automation suggestions.
- Created process flow diagrams and swimlane models to outline interactions between retail banking, fraud, and credit departments, improving visibility into handoff points.
- Managed User Acceptance Testing (UAT) by creating test scenarios, scripts, and traceability matrices in Excel and Jira, coordinating over 10 business users across banking units.
- Logged and tracked defects and change requests from UAT through resolution with development teams, validating fixes in each QA cycle.
- Created test data sets and test case definitions for validating integrations between Snowflake, Salesforce CRM, and third-party payment gateways via secure APIs.
- Supported market research for mobile payment enhancements by benchmarking features across digital-first challenger banks and proposing improvements to the existing mobile app.
- Developed and maintained user manuals, SOPs, and quick reference guides for new system functionalities, targeting business users and front-line loan officers.
- Acted as liaison between business and IT during release management cycles, preparing release notes and validating post-deployment health in both UAT and production environments.
- Participated in production support rotations, prioritizing and triaging bugs, enhancements, and access requests using ServiceNow and Jira Service Desk.
- Used Amazon S3 for staging flat files (CSV, JSON) as part of nightly batch data ingestion workflows into Snowflake, governed through Control-M job scheduling.
- Conducted cost-benefit and risk analysis using Excel and Snowflake queries to evaluate third-party payment gateway integration options, considering factors like security, latency, and vendor reliability.
- Actively contributed to internal governance forums, reviewing data access requests, stewardship KPIs, and ensuring regulatory compliance across cloud-hosted datasets.

Client: Republic Bancorp, Inc., Louisville, KY

Aug 2022 – Dec 2023

Business Data Analyst

Responsibilities:

- Facilitated JAD (Joint Application Development) sessions with business stakeholders to gather and clarify requirements for digital banking enhancements, including loan origination and KYC onboarding.
- Translated requirements into detailed BRDs, FRDs, and FSDs, documenting functional rules, data fields, UI behavior, and system interactions using Confluence and MS Word.

- Created over 250 detailed user stories and epics in Jira, with clear acceptance criteria mapped to sprint planning and delivery timelines.
- Worked with UI/UX designers to validate usability through wireframe walkthroughs and documented feedback loops, ensuring the mobile banking module aligned with accessibility and CX standards.
- Conducted UI and UX testing during early QA phases to validate screen flows and error messaging for new digital features like real-time account updates and remote check deposit.
- Worked on the analysis and redesign of the mortgage loan origination workflow, mapping out all stages from application to underwriting using BPMN 2.0 and identifying automation opportunities that cut processing time.
- Supported regulatory projects by performing detailed gap analysis between current compliance rules and new federal/state mandates, especially for AML, KYC, and OFAC-related updates.
- Documented AML workflows, risk rating logic, and suspicious activity flagging thresholds, aligning compliance rules with backend data models and alerts.
- Created and maintained data mapping documents during core banking migration efforts, aligning data sources across old and new systems to ensure complete field-level integrity.
- Built interactive Power BI dashboards that visualized KPIs around loan volume, approval rates, risk exposure, and customer churn, pulling data from AWS Redshift and Snowflake.
- Used SQL (Redshift, Snowflake) and Python (Pandas) to extract and analyze transactional and behavioral data for customer segmentation, compliance monitoring, and risk scoring.
- Automated generation of compliance and risk reports using Alteryx and Python, integrating data from multiple systems and publishing clean output to shared S3 folders on AWS.
- Participated in sprint planning and retrospectives with developers and QA, ensuring feature delivery aligned with documented requirements and stakeholder expectations.
- Defined data quality checks and validations for migrated data using SQL scripts and Alteryx workflows, identifying and fixing anomalies before production deployment.
- Coordinated User Acceptance Testing (UAT) across lending, compliance, and customer support teams, writing test scripts and managing defect tracking in Jira.
- Created regression test cases for repeated UAT cycles and documented defect triage outcomes and follow-ups during sprints.
- Modeled current and future state process flows for customer onboarding, KYC document collection, and transaction review to streamline handoffs and reduce duplication.
- Implemented field-level data governance rules with CCM (Customer Consent Management) and ensured appropriate masking, retention, and audit practices for PII and financial data.
- Used BBM (Business Behavior Modeling) to trace user activity patterns and propose feature improvements based on clickstream and engagement analytics.
- Developed Python scripts to calculate daily exposure and exception reporting for credit risk and AML alerts, improving visibility for the compliance team.
- Worked directly with AML analysts to design rule logic and thresholds, ensuring backend triggers aligned with regulatory and operational standards.
- Collaborated with cloud engineering teams to document and validate data pipeline flows in AWS, including ingestion into Redshift, transformation via Glue/Alteryx, and Power BI visualization.
- Analyzed CRM adoption post-implementation by reviewing user behavior data, conducting stakeholder interviews, and compiling feedback for prioritized enhancements.
- Created interactive dashboards for operations leadership to monitor case turnaround times, approval bottlenecks, and document rejection rates within KYC and lending processes.
- Served as liaison between commercial lending and IT, translating risk metrics, business needs, and customer workflows into structured technical deliverables.
- Tracked all scope changes and feature updates using Jira change request workflows and version-controlled documentation stored in Confluence.
- Wrote training materials and quick-start guides for frontline teams to use the updated mobile banking app and onboarding modules, supporting user adoption across branches.
- Supported go-live readiness for key deployments by validating data consistency, running smoke tests, and monitoring production alerts during the first 48 hours post-launch.

Client: Waddell & Reed Financial, Inc., Overland Park, KS

Jul 2020– Jul 2022

Business Data Analyst

Responsibilities:

- Partnered with wealth management advisors to gather business and functional requirements for developing a portfolio performance and risk analytics dashboard.
- Created Business Requirement Documents (BRDs) and functional specifications to define features for client-facing dashboards and internal reconciliation tools.

- Modeled existing and future-state processes for client onboarding, trade reconciliation, and portfolio reviews using BPMN 2.0 diagrams in MS Visio.
- Defined data ingestion and transformation requirements for Azure Data Factory pipelines pulling transactional data from PostgreSQL, MySQL, and Oracle sources.
- Collaborated with data engineering teams to validate raw and transformed datasets using SQL queries across Azure Databricks and enterprise PostgreSQL warehouses.
- Built and published Tableau dashboards for tracking KPIs such as Asset Under Management (AUM), trade volume, and client retention metrics; used DAX within Power BI for deeper calculated insights.
- Defined and documented reconciliation logic and exception rules for portfolio holdings using both custom SQL logic and tools like BlackLine and SmartStream.
- Coordinated with the risk and compliance teams to define business rules for portfolio risk scoring using VaR models and rule-based SAS computations.
- Designed and maintained Azure DevOps user stories and product backlog items, collaborating closely with developers during daily standups and sprint reviews.
- Conducted detailed data profiling and validation for month-end financial reports, using Excel Power Query and PostgreSQL to ensure consistency across systems.
- Participated in data modeling workshops to define relationships between clients, accounts, trades, and market feeds, supporting better semantic layer design in Tableau.
- Documented REST API requirements and response schema for ingesting market pricing and benchmark data from external vendors into internal analytics platforms.
- Built and maintained a central data dictionary and glossary of terms, ensuring alignment across data elements used in dashboards and reports as part of the organization's data governance efforts.
- Supported CCM (Customer Consent Management) initiatives by tracking opt-ins and consent flags in datasets and ensuring compliance with GDPR and CCPA regulations.
- Worked with the legal and compliance teams to implement PII handling guidelines and drafted masking rules for sensitive data fields accessed via Tableau and Excel exports.
- Captured and documented UI/UX requirements using wireframes and low-fidelity prototypes in Balsamiq, speeding up approvals from product stakeholders.
- Worked on documenting User Acceptance Testing (UAT) scenarios for new analytics features, collecting structured feedback and updating Jira/Azure DevOps tickets for developers.
- Used BBM (Business Behavior Modeling) techniques to identify patterns in user interaction with dashboards, recommending layout changes to improve insight consumption.
- Wrote SQL scripts for comparing pre- and post-deployment data states in reconciliation projects to ensure no loss or duplication during system changes.
- Developed Excel-based tools to visualize daily and monthly reconciliation break trends, helping operations teams prioritize and escalate high-risk issues.
- Created impact assessment reports for proposed system upgrades, showing downstream effects on reporting workflows, reconciliations, and data transformation layers.
- Wrote training manuals, release notes, and system reference documents for business users and support teams, increasing post-deployment adoption.
- Contributed to the initial rollout of Azure Databricks notebooks used for exploratory data analysis on client behavior and attrition trends.
- Performed SAS analysis to validate risk exposure models across client segments and generated insights for relationship managers to engage at-risk clients.
- Collaborated with data stewards and data owners to assign data classifications, retention schedules, and usage guidelines within the organization's data governance framework.
- Presented ad hoc analysis to portfolio managers on trade execution timing, slippage, and reconciliation delays, supporting audit readiness.
- Participated in Agile ceremonies like sprint planning, retrospectives, and daily scrums; tracked work and velocity using Azure DevOps boards.

Client: Baptist Health, Louisville, KY

Jan 2019 – Jun 2020

Business Systems Analyst

Responsibilities:

- Partnered with physicians, nurses, and administrators to gather business and clinical requirements for enhancements in Epic EHR, covering modules like patient intake, telehealth, and clinical documentation.
- Created BRDs and FRDs with process-level documentation, capturing real-time workflows through swimlane diagrams for patient admission, discharge, and in-facility transitions.
- Defined functional requirements for integrating Epic EHR with a third-party Laboratory Information System (LIS), ensuring HL7 message compatibility and real-time lab result syncing.

- Documented detailed data mapping between Epic, legacy systems, and Snowflake data warehouse to support accurate patient data migration and reporting continuity.
- Used SQL Server and Snowflake to write queries for patient cohort analysis and extract population health insights for HEDIS quality metrics reporting.
- Built operational dashboards in Power BI to monitor bed occupancy, patient wait times, and telehealth utilization; used DAX for calculated measures and Power Query for source cleansing.
- Collaborated with the compliance and privacy teams to ensure all system changes, test cases, and data outputs were fully HIPAA-compliant and aligned with audit requirements.
- Conducted data profiling using Collibra to assess data completeness, validation rules, and lineage across Epic data extracts and Snowflake reporting layers.
- Participated in the development of a Clinical Data Platform (CDP), supporting ingestion and transformation of de-identified patient data for population health and predictive analytics.
- Authored user stories and acceptance criteria in Jira for enhancements such as self-service telehealth scheduling, secure messaging, and visit reminders.
- Wrote SQL queries to fulfill ad hoc data requests from hospital leadership and quality teams, including reports on readmission rates, average length of stay, and provider performance.
- Developed Crystal Reports for operational tracking, such as ED wait times and patient throughput, which led to data-driven decisions that improved clinical flow.
- Supported QA teams by developing manual test cases and executing functional and regression testing for EHR modules, patient portals, and billing system integrations.
- Created and maintained system documentation and user training manuals, leading to a measurable drop in support tickets post-rollout of major feature updates.
- Worked on root cause analysis sessions for recurring production issues within the EHR system, using log file analysis, SQL audits, and user behavior tracking to identify fixes.
- Coordinated with the clinical informatics team and IT developers to validate interface testing results between EHR and lab systems, pharmacy systems, and external care networks.
- Supported legacy data migration projects by analyzing field-level mappings, documenting transformation rules, and ensuring clinical integrity in the new EHR data structures.
- Created weekly Power BI scorecards to track operational KPIs, such as no-show rates, ED re-admissions, and discharge summary turnaround times, with source data pulled from Snowflake.
- Participated in HEDIS and internal quality improvement initiatives by analyzing gaps in care and supporting outreach strategies through data extraction and visualization.
- Served as the point of contact for post-deployment support during a system upgrade, resolving front-line issues and escalating critical bugs during go-live periods.
- Conducted live demo sessions and feature walkthroughs with physicians and department heads to ensure alignment between system functionality and care delivery goals.
- Documented consent management processes and patient data flows for CCM tracking, focusing on opt-in/opt-out behavior for research and data-sharing permissions.
- Identified redundant clinical steps through BPMN mapping and proposed workflow redesigns that reduced unnecessary manual inputs during patient documentation.
- Supported data governance initiatives by tagging critical data elements in Collibra and establishing ownership roles for clinical data used in reporting and analytics.
- Managed Jira workflows and sprint planning activities related to clinical enhancement requests, interfacing with cross-functional Agile teams and Epic configuration analysts.
- Maintained ongoing stakeholder engagement by preparing biweekly status reports, risk logs, and change request updates to clinical and IT leadership teams.
- Documented and validated interface data from LIS and EHR to ensure correct lab result mapping, alert routing, and encounter-based triggering of follow-up workflows.

Client: Humana Inc. | Louisville, KY
Associate Business Analyst

Jun 2018 – Dec 2018

Responsibilities:

- Supported senior business analysts in gathering and refining business requirements for updates to member enrollment and claims adjudication systems used by operations and provider services.
- Captured and documented meeting notes, key decisions, and follow-ups during requirement gathering workshops and stakeholder interviews, helping keep project alignment on track.
- Created and maintained functional documentation, user stories, and change logs using Jira and Confluence to support system enhancements and bug fixes.
- Assisted in drafting process models for claims intake and routing workflows using MS Visio, helping identify delays and bottlenecks in manual validation steps.

- Ran basic SQL queries against Oracle databases to retrieve member and claim records for analysis and to support defect validation in lower environments.
- Participated in creating and executing test cases for minor changes in claims processing logic, logging identified defects and working with QA to ensure resolution before deployment.
- Validated data in QA environments to confirm that business rules for enrollment eligibility and claim routing were implemented correctly per the documentation.
- Helped manage incoming change requests and defects using Jira, categorizing and prioritizing items based on impact and working with developers for resolution tracking.
- Contributed to the creation of user guides and quick reference materials for new features in the claims adjudication tool, supporting operational onboarding and reducing support inquiries.
- Used Excel and pre-defined reporting templates to create weekly status summaries and sprint progress reports shared with project stakeholders and team leads.
- Organized project artifacts, SOPs, and version-controlled documents in SharePoint, improving team access and reducing redundant communication loops.
- Collaborated with the provider network team to clarify system rules and interface requirements, ensuring IT teams accurately understood provider configuration needs.
- Followed up directly with business users to resolve unclear requirements or edge case scenarios, which helped reduce rework cycles during development.
- Assisted in preparing visual presentations for weekly stakeholder updates using PowerPoint, aligning progress reports with project goals and timelines.
- Shadowed senior analysts and SMEs to quickly learn core healthcare concepts like HMO/PPO structures, eligibility rules, and the claims adjudication lifecycle.
